Topic: 1 Message: 1

to everybody out there,

has anybody any info or knowledge re pcr1000 in respect of modified software to use on the average pc. i have original v1.31. particular interest in reception of weather satellite reception. are there any clever tricks to be learnt or passed on, particulaly expanding channel memory etc..

good listening, chris j catton in sunny dorset.

From: Tom Richert
Topic: 3 Message: 3

Greetings all.....

I have just joined this list, I have just ordered a pcr-1000. So, lead me away and tell me what to do or not do. My interest is in listening to all that is listenable and the technology that lets it all happen.

??? Are there software enhancements available? Does any one have the wide band mods or info on what is involved? HOW GOOD IS THE PC NOISE REJECTION? (Darn caps lock)

Dr Tom Thanks for replys......

There is a fine replacement for ICOM's software package called TalkPCR.
It's about $45, and is a *major* improvement over ICOM's offering. It also
allows backup and restore of the eprom. It comes from Pete Mahy in the UK.
His web page is

http://www.mahy.demon.co.uk

Contact him at TPSuprt@.... I ordered it from:

https://www.regnow.com/softsell/nph-softsell.cgi?item=2395-1&referrer=1

I've used it for several weeks, and have only very positive things to offer.
...highly recommended.

73, Joe, n8gep@...

From: chris j catton
Topic: 9 Message: 9

dear Trish & Carla,

You have realised and expressed at the outset that which I just realised at day one, in that activity in this egroup is minimal.

I would like to welcome and wish you well with your endeavours with the pcr1000. I have the same and find it most useful and successful.

The wish to backup and try other softwares was one of my early tasks, as I recall (because I can't find the file with all the info on it), I looked through the small archive, together with new postings at that time, found the required backups and alternative software at that time from other members.

I must say now, that having had the dabble then, I am very happy with the original software supplied. Naturally, it would make sense to look and find out what is on offer, you may well prefer an alternative, just experiment with great care !

Where are you in the country, I am in S.Dorset,

regards, chris j catton, chrisjc@... (reply off the egroup if you wish)

Topic: 9 Message: 10

Thanx Chris for the reply ..

By the way, PCR-1000@... is not that busy
either, so I've subscribed to both of them..

I am located near San Jose, California...
across the pond ..

For Info, I'm the mobile radio repair shop
supervisor with the City of San Jose here...

23+ years in the land-mobile radio field..

Never been much into scanner-monitoring, especially
after my first 3 years working as a tech with Motorola
back in the late 1970's and hearing enough squelch noise
during the day :-)

In my off-hours, I prefer playing with HF radio..
am also a member of army mars (AAR9JA/T is my mars call) ..

I purchased a PCR1000 for use in our Communications
Division as a way to capture signal strength readings
for doing radio coverage drive testing..

Most land-mobile radios of the Motorola variety don't
provide a signal strength indication that can really
be used for the application I wish to do.. I found
that the "S-meter" on the PCR1000 seems to correspond
roughly to EIA spec in that "S9" is supposed to be
equivalent to 50 uV, and of course each "S-unit" should
be 6 dB.. I found the PCR1000's S9 reading to be 45 uV
and roughly logarithmic response.

Spot checks of the "S7" reading on 30, 150, 460, and 950
MHz found that it was roughly -80 dBm on each frequency,
so the linearity across the land-mobile spectrum
is pretty good actually..

The next step is to bridge the RS232 cable with a break-out
box and devise a method to capture the character string
from the PCR1000 that represents the signal-strength update
that is sent to the PC ...

If anyone has done this in the past, I would love to hear
from them..

At any rate, I was so impressed with the PCR1000 that I've
purchased a second one for myself..

BTW, I was able to order an "unblocked" version of the
PCR1000 for our radio shop as we are local govt and there
may be a need to monitor cellsites in our area if they
are causing interference problems, especially to our
public safety channels if a transmitter at a cell-site
goes spurious...

Personally, listening to cell phone calls gets really
boring after the first 20 minutes, so I'm not all that
interested in "unblocking" my own personal one at this
point..

" Hi honey..watcha doing??.... not much... love you..
will be home in 20 minutes ... blah blah blah... " ..

CLICK...buzz.. " Hello Suzie.. wanna go out for a
beer?? I've got a half-hour to spare before I have
to get home...blah blah.."

Trish

Well, all I can say is that the PCR1000 seems really
good so far.. I've been fooling with it for the past several
days...

I wanted acceptable performance both on the land-mobile bands
and on HF, so that sort of ruled out the Ten-Tec RX320..

ex-Air Force Security agency?? hmmm AFSA ???hmmm...

If you look at my comvan that I have, it used to have
the ground-version of the AN/APR-9.. The ground
version was the AN/MLQ-24 ... believe it or not,
it came with all the original equipment, including the
10.5 MHz- to 12.2 GHz spectrum analyzer, but donated it
all to an electronics museum since it ran on 400 Hz
AC power ...

Were you a scope-dope? squirt-message catcher ??

My PCR1000 is going into my comvan after the laptop
computer gets upgraded.. the PCR1000 should make
an excellent general-purpose search receiver..
Also have a Marantz commercial cassette recorder
to be able to record traffic.. it's a PMD222..

Did you know Pappy Doyle, the spook that got
shot down in Vietnam ??

see:

I was a fixer. I kept the equipment working.
Look at www.ec47.com.
USAF Security Service - we worked for the NSA (No Such Agency)
That name, Pappy Doyle sounds very familiar!
When I left 'Nam, I went to Yokota AB Japan and flew on the RC-130BII.
We had the AN/APR-17 receiving set on Ops 4 Position.
I would sit in with Op 4 sometimes and we would have fun looking for stuff.
When I went to Offutt and flew on the RC-135's, I usually sat with EWO-3 (Raven 3) and worked with him. He too used an AN/APR-17 and we found some neat stuff.

The equipment on the EC47 was state of the art. It was ARDF (Airborne Radio Direction Finding). I would sometimes take over for the X Operator and do the DFing. I would also fly the Nav console and work the signals to get a good CUT on them. Back then, I was a Ham and could handle the Morse and would sit a take down numbers sometimes. Actually, when I was noit doing my job; I learned all of the others.

I even got some stick time!

Once a Spook always a Spook! lol

13. com port baud rate question:

Yahoo group: PCR1000
Date: 2000-08-13 06:22:38 UTC
From: Trish & Carla
Topic: 13 Message: 13

I've been exploring different baud
rates between the PCR1000 and my laptop
computer, thinking that faster baud rates
would provide updates to the "S-meter" that
would be less jumpy..

Out of the box, I was running the receiver
at 9600 baud.. Now I'm at 115 KB and seems
to run fine.. 8;N;1; no parity, with xon/xoff
flow control were the initial settings and have
left them the way they were ..

Has anyone found problems with running the
speed up on the comport ?? I don't want to
mangle the programming of the radio in
the process..

Trish

16. Is VisualRadio a good product ??

Yahoo group: PCR1000
Date: 2000-08-14 06:42:14 UTC
From: Trish & Carla
Topic: 13 Message: 16

I just ran across the visualradio
info on the 'net, located at:

<http://www.visualradio.de/>

anyone have any reviews about this
software ??

I have a PCR-1000 in the serial# range of
4900... Will Visualradio corrupt my EEPROM ??

17. NTIA - National Telecommunications and Information Administration

Yahoo group: PCR1000
Date: 2000-09-08 15:10:21 UTC
From: combatsent@uswest.net
Topic: 17 Message: 17

National Telecommunications and Information Administration

I did not realize that alot of people did not know about the NTIA.
Considering that they are the ones who assign the Federal Frequencies and are the final say in the use of the Military Frequencies, I had just considered that all people who monitor any frequencies at all would know abot the NTIA.

http://www.ntia.doc.gov/

This is their main page and this is where they get into the neat stuff:
http://www.ntia.doc.gov/osmhome/osmhome.html

You can download all or parts of the NTIA Red Book here:
http://www.ntia.doc.gov/osmhome/redbook/redbook.html

The Red Book contains listings of the Federal Frequencies but not by agency.

The entire system is undergoing sweeping changes and without knowing how it is changing may leave you out of the loop. By 2005, a whole new band plan for all federal agencies will be in effect. Chapter 4 has most of the data, but there is much more to read here and understand.

Get the Adobe Acrobat Reader and download the Red Book and start reading.

18. PCR1000 times Two!

Yahoo group: PCR1000
Date: 2000-09-23 12:28:52 UTC
From: Wayne Wilson
Topic: 18 Message: 18

For those of us with two PCR-1000's each on a different com port you CAN run 2 instances of the PCR1000.exe program if you use your Explorer and right click on pcr1000.exe and copy it in the same directory as the original pcr1000.exe. Then right click and rename it to something else such as pcr21000.exe and create a second short cut for this one. Now you can run each program and set the com port to correspond to the pcr that is on that port. Works great! I have one on Com1 and one on Com2. Take care. Wayne.

http://www.bldrdoc.gov/timefreq/service/acts.htm

If you would like to keep thwe time updated on your
computer, you can download the NIST TIME ACTS for your
computer.

With this program running in the background, it will
automatically update and keep your time and date current on
your computer as long as you are connected to the internet.

I keep mine set for UTC or Zulu time so all of my posts are
time and date specific to all the world.

Hi Ryan, you can receive from wherever your antenna will allow, ie. good antenna = good reception, reprogramming may not gain you anything, ive played but always return to original setup. Good receiver whatever.

Greetings List Lurkers....

I bought a 1000 at the swap in Detroit yesterday and I have a question:

It came with a little instruction manual (# a-5456-g-EX2) and I am wondering if there should have been a more in-depth 'How to use' it manual or do we rely on the imbedded help file.

The software came on two disks, version 1.31; is there a later version?

Well, thats two questions. Anybody got answers or suggestions for a newbie?

26. UT-106 DSP Question.

Yahoo group: PCR1000
Date: 2000-10-27 18:20:00 UTC
From: Rodger N. Bird II
Topic: 26 Message: 26

I have just purchased a Icom PCR-1000. I was wondering if the $150.00 UT-106 is worth the money. It sounds like a lot of money for DSP. Can you give me some details on DSP features/benefits for the PCR-1000. I would assume that the major benifit with DSP would be on the SWL or HF bands. Also, how do you control the DSP via the Icom software (I found the control in TalkPCR). The 2 Icom PCR-1000 owners manuals do not mention UT-106 option, installation or operation.

Thank you for your help,
Rodger

I have traced this problem down in my radio to a bad Q12 2SK2171.

This is a RF amp FET transistor in the front end of the radio. This
transistor amplifies the 1.8 to 50 Mhz range. If your radio works below
1.8, this is your problem...

I am almost certain a lightning strike caused this...

I just checked the frequency. Sounds absolutely normal, with (and of course without) DSP activated. I am even hearing a signal that sounds somewhat distant, very clearly.

I would say the unit is defective. I have never heard unpleasant artifacts that I can definately attribute to the DSP. Try another?

Hmmm... That's interesting. Well, my Libretto 100 (P166MMX/32MB) does not recognize it, nor does my desktop which is K6-300~MHz with 64MB RAM. I just figured it was a quirk in TalkPCR, one that will delay my purchasing the program until it, and a few other bugs, are straghtened out.

As I said, the Icom software sees it...

Veddy Interesting what you say, though.

I will forward this to the list for others to contemplate.

GAK! Update! I duplicated the problem. After 15 or 20 minutes I got the
crud. It seems to be at 155.907. But I can say that I only noticed it after
I enabled the PL tone decoder, which then became necessary to mute the audio
between transmissions.

It was not particularly affected by banging on the radio. I turned the radio
off and then on again a few minutes later and the crud is not present.

I will have to keep an eye on this to see about the pattern.

48. File Format Conversion Software

Yahoo group: PCR1000
Date: 2001-02-13 06:29:14 UTC
From: Craig Orban
Topic: 48 Message: 48

Am looking for a software utility to convert
Scan*Star Deluxe *.SWG files TO either Icom's
*.MCH or TalkPCR's *.FQL format.

I'm already familiar with the commercial software
offered by Computer Aided Technologies called
"MAGIC" and the shareware ICOMVERT.EXE which
converts Icom's *.MCH to Scan*Star *.SWG - any
others?

Thanks in advance.

Great receiver! There is a 3rd party (Opto? don't
remember) device but it is very expensive. Here is
how I use my pcr1000 to get trunktracking:
1) Get any used cheap 800mhz scanner. Tap the
discriminator audio. (not hard..even I did it!)
2) Make or buy a data slicer. Radio shack.com sells
them and thet are called Hamcomm Interfaces, used for
packet radio and such.
3)get the latest version of TRUNKER (free)
4) hook slicer to com port on pc.(25 pin)
5) plug other end into discrimnator plug on cheap
scanner.
6)Tune to the frequency of the data/control channel
7)Run trunker while pcr1000 is on and set to 854.000
Thats it! The program will control the pcr1000 and
you will see trunking on the monitor as well as hear it.

I like this idea. But step 7 specifies a freq of 854.000- is that a generic starting point and the TRUNKER software moves it to the proper freq, or is that a specific example you need to use? Thanks

854.000 is just a generic starting point. There is
usually nothing going on there. Any other channel
would work but this is usually a safe bet.
Another thing you can try before going out and getting
all this stuff is to load TRUNKER with the data slicer
coming out of the discriminator port (Packet)that
comes with the PCR1000 into the sound cards mic in.
Tune the radio to the control/data channel and you
will have trunking! Of course this way you will not
be able to hear anything but it will give you an idea
of how it operates. Study the Trunker documentation.

You can edit it so that it will show the name of the
groups in your area.

Happy Trunkin

From: willywilson451@yahoo.co.uk
Topic: 56 Message: 56

Hi All,

My PCR1000 suffers from front end overload in the HF bands (3-30Mhz) which causes horrendous intermodulation noise. I can eliminate or reduce it using the attenuator.
I am experimenting with passive preselectors which seem to be successful.
Does anyone else have this problem or have I got a bum unit?
Regards,
Willy GM3NUF.

Topic: 56 Message: 57

what you are experiencing is quite common,
especially with any type of full-sized outdoor
HF antenna..

The best solution is a non-amplified preselector
unit.. I had an existing MFJ989C, 3KW antenna tuner
and it does a good job of peaking the response to only
the signal I am trying to listen to..

Of course, any time I change frequency, then I have
to re-peak the tuner ...

Hi Trish,
Thanks for your reply. I have a MJC 989C and so have tried your suggestion. (Why didnt I think of that?) Works fine on reducing the mush but quite fiddly to tune correctly.
All the best,
Willy.

Hey Mark,

Way to go! You'll love it.
One thing I forgot to mention. After putting pcr1000
at 854.000 you have to close the software. The radio
should stay on for a while and then Trunker will take
control. I use Radio Manager, TalkPCR and the ICOM
and have no problems. Have fun.

Hi there,

I have a long standing similar problem by description.

What I must add is that when the scan stops the window throws up "connection" in the top panel bar, when it disappears, I can continue scanning and it will stop again, etc..

In the early days I did the obvious and check for a connection problem but found nothing.

Subsequent testing and trying did show me that the problem would just disappear if I re-installed the s/w, or exited and re-started the software, or re-booted the PC.

I did seem to improve matters by not running my usual Norton System Doctor, but the problem did not go away completely.

The other observation I have made is that the motherboard I have, a Gigabyte, has never been very friendly to me, to the extent of building another PC with an Asus m/b which works superbly.

Have tried other softwares but still come back to the Icom s/w supplied, if you get any other feedback I would be very interested.

Thanks for the reply. The other symptom you describe (the "connection" in the taskbar tab) is also present.
I know that this is a problem with software I have recently installed (Long story -reformat/new mother board/new graphic card/etc.) but re-installing the original Icom software over the top doesn't seem to help. I've e-mailed Icom again seeking advice but not too hopeful of a positive outcome .Funny that you mention the Norton problem as I installed PC-Cillan and suspect that the problem got worse after that although disabling it doesn't help. If all else fails I might try a reinstall of Windows to see if that helps.

Glad you mentioned that, I have tried that as a solution a number of times.

The favourite ongoing doubts in my mind are, a). the software, b). the gigabyte motherboard.

That does not exclude other possibilities.

The maybe problem with the motherboards goes back to when I built this PC using a Gigabyte m/b, it was to be quite pokey with 2 hard disks, ROM, ROM W/RW, SCSI inc a third disc and 2 scanners, LS120 floppy etc.

That m/b did not want to perform properly and I had suspected the SCSI h/d which was replaced with no change.

I thought what the hell and rebuilt using an ASUS m/b, it all ran first time no problem and still does, bit of a mystery there. I then built another PC with the Gigabyte board which is dedicated to the internet and the radio.

I have heard various observations about the ICOM software being rubbish, BUT, I havnt been able to isolate anything better that works consistantly so ive still got the original running.

Interesting again, my PC is running 24hrs a day, 7 days a week, the ICOM can in fact run problem free for weeks at a time, then it will get playfull on and off, then behave.

What is "MS Activesync

Hi Guy

Im a newbie to this group and was wondering what dos software you all
rate as the best and what size pc did you test it on.

Are we allowed to post frequency lists here ?

MS activesync is used to connect my Casio Pocket PC to the PC (gets confusing using abrieviations but I think you know what I mean). All it seems to do is check that the files on the Casio are the same as the files on the PC (not all, just the ones that need to be synchronised). Was wondering about the motherboard as well as I've tried a Soyo and now a Jetway and the Jetway doesn't seem to like the network card I had installed (took it out and just happy to have a computer that's just about working). The only other piece of software I used was Talk PCR http://www.mahy.demon.co.uk/TalkPCR/TalkPCR.htm

This seems to be a better program in someways but less so in others

73. Can anyone help???

Yahoo group: PCR1000
Date: 2001-03-27 17:11:08 UTC
From: shaloca@btinternet.com
Topic: 73 Message: 73

Hello All,
My name is Lorraine and I was wondering if anyone could help me with a problem my husband has with his PCR1000. He's out of the country at the moment, and was looking forward to a bit of DX-ing while away. He bought a PCR1000 about 2 weeks ago just before he went. Although it worked beautifully before he went, it has packed up and he is getting a constant error message saying "error on comport1 could not communicate with radio"
He is using a laptop (a new one, not sure of the specs) with WinME installed on it. When he initially set it up, he used it for approx 3.5 hours and he re booted at least twice. All was still OK. He packed it away until he arrived at his destination, when he set it up there, this is when he got the error message.
He set it up on comport 1, but when he started the software the PCR made a "click click" "click click" "click click" "BONG" noise from the internal speaker and that was it..error
He has reinstalled WinME,and all the PCR software, he has bought new leads and the power supply is putting out 12.8v.
He has tried it on 2 other laptops, 1x486 and 1xP166 both running Win95 but no joy.
Spoke to tech. support at ICOM today, they were supposed to be e-mailing me a copy of the software (they think ours is corrupt) but still nothing.
Does anyone know where I can find a copy of the software on the internet to download?? or Has anyone else had this problem...what is the cure??
Thanks in advance,
anything to point me in the right direction would be appreciated

Lorraine

I'm sure I read somewhere recently that insufficient voltage to the
PCR-1000 could cause it to react strangely.

If your husband is using abroad then this could be a possible cause of
his problems.

Just a thought, and hope he gets it sorted soon.

Regards,

Dougie.

Spot on there, however another possibility is your Rx prom may have been corrupted, If you have not backed it up, (various suggestions are available from this site archive), "I think" its a return to manufacturer to get that put right. Symptoms dont sound familiar, apart from the obvious its in the wrong com port.

Best, chris j

Thank you to Mike, Chris and Doug for their advice.
I am e-mailing it all to Hoppy (my husband) and hopefully he will manage to get it up and working. I have no idea if he has made a back up of anything, as yet I've still to lay my hands on the little black box. (He only got it a day or so before he left the country). I am still twiddling away at home with our Icom ICR-71E with an ALA1530. The ALA is brilliant bit of kit.
Well thanks again for your help,
I didn't expect to have such quick replies
all the best

79. ref. problem with PCR1000

Yahoo group: PCR1000
Date: 2001-03-30 18:34:35 UTC
From: shaloca@btinternet.com
Topic: 79 Message: 79

Well Hoppy seems to have narrowed down what could be the problem with his PCR. After trying all your suggestions, he was still having no joy.
He said that he did file transfer between his laptop and his mates and that worked so he reckons that it must be the PCR comport that is u/s.
He'll just have to wait until he gets back here to try and sort it out. No dx-ing for him then!!

80. Saved by a backup!!

Yahoo group: PCR1000
Date: 2001-03-31 15:51:58 UTC
From: Victor
Topic: 80 Message: 80

I just want to relate to everyone how very IMPORTANT it is to do an EPROM backup of your rig. After flying home from a trip with my radio I set it up and all seemed fine except that I couldnt get anything in the VHF air range. I use TalkPCR so I read the help file. That was a symptom of a corrupt EPROM.
TalkPCR comes with a built in EPROM backup utility and luckily I made a backup months ago. When I ran a "verify" it showed 109 errors! I restored the EPROM settings and VOILA...back in buysiness again.

If I didn't have that "backup" I would have had to send the rig back to ICOM to reprogram and God knows how long that would be!

BACKUP NOW!!!!!!

81. DSP

Yahoo group: PCR1000
Date: 2001-04-13 16:24:53 UTC
From: Pres Waterman
Topic: 81 Message: 81

Hi. Sorry for the off topic request. Does anyone know how I can take audio from a tape recorder and clean it up using DSP software? I have a shirt-pocket recorder and the sound is only fair. I thought I could patch it into a laptop, record it as a .wav file, and then crush it through something to clean noise, improve fidelity, etc.

The kludgey way is to play it into a transmitter, and using the DSP function in the FT-100 or the PCR-1000 receivers, clean it and re-record. But that's so many steps of analog conversion!

Thanks

83. Help!

Yahoo group: PCR1000
Date: 2001-04-14 02:36:11 UTC
From: mjbonney@msn.com
Topic: 83 Message: 83

This has more to do with the Trunker software and my computer than my PCR, so I apologize if this is "off topic".

I have been running the Trunker program through my PCR1000 and it works fine. The one problem I had was that my computer only came with 1 Serial port, so in order to be able to decode data, I bought a serial-to-USB adapter. I can run the PCR though this but I am unable to get Trunker to drive the radio. The Hamcomm won't run through the USB (probably because of the lack of pin assignments w/ a USB connector, either. Any suggestions????

Thank you,

Mark

84. Re: Help!

Yahoo group: PCR1000

From: Victor
Topic: 83 Message: 84

Hi Mark,

The hamcom is very picky. It likes old 25 pin ports only. I have not gotten it to work with a 25 - 9 adaptor. Most newer serial ports that come on the mother board do not have enough power to make the data slicer (hamcomm) work. A lot of people have an old 386 or 486 DOS machine dedicated to just running Trunker. 5 bucks at thrift stores.

Another alternative which I have done also is to buy a 16 bit (ISA) serial/Comm card. Even an older IDE I/O card with everything diabled except the comm ports will do.

Good luck,

Victor

Look at the Serial Number on the tag. Serial Numbers before 34xx were able to have the country personality code number changed to provide full frequency coverage.

Also if you try to tune say 877.3500 and you can't or you don't receive any hash/receiver noise on the frequency then you can pretty well figure it is blocked.

Take care.

Wayne.

93. Looking to buy

Yahoo group: PCR1000
Date: 2001-05-12 11:17:31 UTC
From: rsillitto@hotmail.com
Topic: 93 Message: 93

Hello all,

I've been offered a PCR1000 to buy - and looking at the specs, it looks like a wonderful product.

I was wondering what niggles there were - just so I can weigh them into the equation of whether to buy or not.

How well does the device handle receiving data transmissions - is this an easy to do function (which one might expect seeing as it is connected to a computer!!!)

I'm looking at this as an upgrade from my AR1000 (handheld receiver), and I perceive the benefits to be an easier to use interface, much more suitable for my home usage, and extended lower freq response and SSB capability.

Is the PCR1000 the right step - rather than buying a dedicated HF receiver?

Any comments would be gratefully received!!

Richard.

Get it, you won't be sorry. Can't go wrong with ICOM
anyway. If you have another little cheap scanner you
can use that for a data only scanner in conjunction
with the Software "Trunker" to make the PCR1000 a
trunking scanner also!
I use Radio Manager and TalkPCR..Both excellent.
Only one thing....Use the eeprom backup feature that
comes with TalkPCR because PCR1000's are known to lose
their eprom settings from time to time.

From: bva2@pacbell.net
Topic: 98 Message: 98

My PCR1000 works nominally, but the timebase clock for the PLL seems to be a little bit off, with SW channels coming in at higher and higher offsets from the nominal fundamental as you go up the spectrum. To give you an example of this, the WWV carrier at 5 MHz comes in at 5,000,017 Hz; the 10 MHz carrier comes in at 10,000,034 Hz; 15 MHz at 15,000,051; and so on.

Additionally, I've noticed that the product detector on SSB doesn't put both the LSB/USB sidebands into the exact center of the IF shift passband range.

Call me a nitpicker, but I'd like to tweak this radio up so it's dead nuts in every respect. Trouble is, I dont have enough techy info to do this. Is there a variable cap on the PLL timebase crystal? Or is it netted up digitally? I have no clue. I have the schematics posted in the files area, but they are not high enough resolution to really read clearly. Besides, without a theory of ops document, it's pretty hard to figure out exactly how everything works anyway.

DOes anyone know of someone who works on these radios at this level?

Bill VanAlstyne
Aptos, CA

P.S.: If somebody has a decent paper schematic, I'll volunteer to create a high-resolution schematic that is completely readable. I have the technology. :-)

99. Psion Series 5mx and PCR1000

I've thought about buying a PCR1000 to hook up to my Linux/HAM
computer.

Does ICOM include the instruction for CAT with the receiver?

No, but they do include a Windows software that does the trick. Maybe you could grab the info from the serial line.

Also there are third-party vendors who can control the radio, so the hack has been done

There are Linux applications to control the PCR. I haven't tried the ICOM software, but TalkPCR runs under WINE (Windows Non-Emulator) if you don't mind the scanning speed being slow.

Yep, I did also... But since I use a Macintosh I never open file
attaches.... Maybe the moderator should change the settings on the list
to disallow ANY file attach, this would eliminate this sort of problem.

"Dr Tom" sent a virus attachment to another email group (scanner)
luckily Norton caught it. I'd recommend deleting any emails from this
"Dr Tom". It may not have been intentional but 2 different virus
attachments to 2 different groups on the same day is pretty suspicious.

I've attached a text file with the install password for what I thought was the "freeware" version (v1.2) of PCR1000BUR. I have the corresponding install executable if you need it. The file size is ~2.5 MB. Let me know if you would like me to email it to you.

129. Need to Know

Yahoo group: PCR1000
Date: 2001-06-09 23:01:40 UTC
From: Larry
Topic: 129 Message: 129

I am looking for a better than average rcvr. I have ht wide band rcvrs, but they are TOO sensitive. My main reason for shortwave is milcom interceptions. I get clobbered in my shack by the power lines coming into the house at that corner. I am looking either for a PCR1000, or an IC-R75. The 75 would be a stand alone sometimes hooked up to the computer. Obviously, the 1000 would be on the computer. What is the sheilding like on the 1000, and how good is the DSP unit. Has anyone tried the 1000 with any antenna other than the one supplied? Any and all replies are welcome(even negative!) I have never had hands on with the 1000.

TIA,

Larry

HECK of a nice receiver. You will be pleased. Very good shortwave reception on a discone which is good because you may want to use just one aerial for HF-VHF-UHF

Get the PCR-1000

Pres is exactly right.... go with the PCR-1000 / discone. The ICOM software supplied with the PCR-1000 is pretty limited (sucks), so you'll also want to try the shareware program TalkPCR for computer control. With the TalkPCR/PCR-1000 combination, you may find you'll start using the PCR-1000 for much of your listening above 30 MHz as well.

I have the DSP unit and it works very well.

You realize, of course, that us folks on the PCR-1000 list might be a little prejudiced! {:^?

TalkPCR seems to be the software most mentioned here. There seems to be quite a choice - does anyone have any experience with other programs?

Must endorse opinion on the PCR1000 - great radio - sure you won't be disappointed Larry bit ICOMs software very basic.

Must have my five penneth, I've used the original software and I'm happy with it, TalkPCR seemed rather untidy but many are happy with it. My advice is run with Icom and then try the rest, decide for yourself.

Do however first look at backing up the EPROM, that should be your highest priority.

From: BEAUZEAU692@AOL.COM
Topic: 129 Message: 135

I have been using the PCR1000 for about 2 mounths now. I think it is a very good rcvr. The antenna that comes with the unit is worthless! Good to use when you first open the box but that is about it. As for the power line problem, I cannot say for sure but I have mine sitting on top of my pc for the last few weeks and I do not see any problems. I also had it sitting next to the base unit of my cordless phone when I first got it, no problems. [900 meg hz digital phone] The software that comes with it may not work on win 98 and higher. I am using win98 se and it works ok on my pc, but I would recommend using TALKPCR. USE THAT SOFTWARE AND USE THE EPROM BACK UP UTILITY THAT IS PART OF THAT PROGRAM. I mainly use it for 30mhz and up but i do listen to ssb hams on 80 40 20 15 meters with a portable long wire ant strung up in the room 10-15 feet long. Do not have the dsp unit.

From: fkar@lettera.net
Topic: 137 Message: 137

I want to buy a PCR1000, but first I have some doubts.
Can anyone tell me how many channels and frequencies is capable to scan per second?
I mean if any of you has counted for example in 2 minutes how many channels has scanned and then divided by 120 (in case of 2 minutes of course) as it results the scan speed in channels/second. I have had a result of 18 channels/second in my Icom R1.

Thank you in advance

Two programs, Trunker (Motorola systems) and ETrunker (Ericsson EDACS)
support the PCR-1000 as either the "control" scanner or the "controlled"
scanner.

You can download them from http://www.trunkedradio.net/digital/download.htm

There is lots of information about trunk-tracking at
http://www.trunkedradio.net

There is some PCR-1000 specific information by Mike Curtis at
http://www.trunkedradio.net/digital/dig/pcr1000.txt

Topic: 143 Message: 143

Hi All,
I am currently working on a new Windows based scanner program for the Pcr-1k. I am about 2 weeks away from posting the first beta...

I am looking for info for the signal level conversion from what the radio returns (0 to 255) to it's 'S' level reference (S1 to S9+60).

I have looked through a few command lists, but the ones I've found don't list it...

If you know of a link or ??? please reply...
Thanks in advance,
Jay

FYI.

Free ICOM PCR-1000 Software! Check it out:

http://www.arachnoid.com/icomcontrol/index.html

From the web page:

"What is IcomControl?

IcomControl is a radio controller designed for the Icom PCR1000.
IcomControl is designed to be very easy to use.
IcomControl has 400 easy-to-use memory locations.
IcomControl uses plain-text data files, so importing and exporting data is easy also. ·IcomControl has advanced frequency programming and scanning features.

Oh, I almost forgot the other good news. IcomControl is CareWare -- that means no money, now or ever. You just have to care."

Download the software from this linlk:

http://www.arachnoid.com/icomcontrol/icomcontrol.exe
I have not tried it. I use a registered version of TalkPCR.

From: Douglas Coull
Topic: 148 Message: 148

Hi Folks,

Apologies in advance as I'm sure this topic has been covered before,
but a recent HD problem deleted all my archived messages.

When using TalkPCR on my 'works' laptop all is OK.

I've recently acquired an AST laptop but cannot get the radio to
respond on any ports. The weird thing is that my 2042 receiver running
Probe software in DOS runs fine and recognises Com Port 2, but TalkPCR
doesn't. Maybe a 'windows' thing ....

Any thoughts?

TIA.

Larry,

I have an Icom PCR100 and use a variety of antennas to listen to the UHF milair band. Mostly, my amateur dualband and tri-band antennas. If you are asking about the HF milair, I have been told to use just a discone antenna(Radio Shack, Diamond, Comet, etc.). It is sensitive enough that I use my Diamond RH-77 ht antenna. It's all up to you- size, expense, indoor, outdoor.

If you have any more questions, you may e-mail me direct.

153. DSP

Yahoo group: PCR1000
Date: 2001-07-30 01:28:05 UTC
From: Pres Waterman
Topic: 81 Message: 153

Good morning Pete.

I have a problem and a suggestion about DSP and the PCR-1000.

1 My DSP button in TalkPCR is greyed out. I think we talked before on this but didn't solve it. I am on 2.4 and it is a fresh install.

2 On my Yaesu FT-847 and FT-100, their DSP does a pretty good emulation of a CW filter. Since the PCR-1000 has a minimum filter of 2.8KHz, could you make the DSP filter down to 500/300/200 Hz? I know it is not the same as IF filtering, but it still would help.

> i'm at my wits ends,heeellllppp

The standard fix to that problem is to dump the supplied software and
use TalkPCR instead. *Lots* of people have the same problem as you
with the supplied software, spread across a wide range of PC hardware
and OS versions.

I have no connection with TalkPCR except as a very satisfied user.

Cheers,

Mark.

Yes, this has thrown up before, nobody has found the reason yet to my knowledge, they just suggest an alternative software.

For me the problem will disappear for ages and then come back, the simplest 'solution' I have found is a warm boot once or twice and then it will behave for a while. NB., the system is normally running continuously, and I prefer Icom s/w to the rest, that's my choice.

I also dumped the supplied software...not very nice looking and found it a
bit of a fiddle to work with...TalkPCR looks good and is far better but I do
like Icom Control....nice, easy to use package..

It will do DTMF out of the box. Also CTCSS tones.

No MDC decode built in but there is a packet output, which seems similar
enough to do outboard decoding

Date: 2001-09-12 22:52:54 UTC
From: mirmanuk@yahoo.co.uk
Topic: 162 Message: 162

Hi group

I was thinking of using a PCR1000 and laptop to go portable Inmarsat listening using a timestep antenna and pre-amp. Currently I use it on my base R7000. Is it possible to extend the 1000's rec. frequency range up to around 1500Mhz from the current limit of 1300Mhz? Using software updates/3rd party programs?

Cheers
Mirman (Steve)

163. How does it compare?

From: John Walters
Topic: 164 Message: 164

How does it compare? From: scan800@...

My PCR1000 has a co-linear whip for 25-1300 Mhz and also
A balun connected 60 foot wire. There is a further optional antenna
Which is currently a 28Mhz amateur band mobile whip.
I use a simple antenna switch between the three antenna sources.

I do have overload problems on low frequency (Broadcast) stations
when using the long wire antenna.

Reception is compared with my ICOM IC728 transceiver which
Is connected to a multiband amateur vertical (3.5 - 25 Mhz)

I would say that the PCR1000 compares equally with the IC728.
In sensititivy with the exception that there may be overload problems
In the broadcast band..

167. PCR packet output

Yahoo group: PCR1000
Date: 2001-10-05 11:55:29 UTC
From: j_largo@pobladores.com
Topic: 167 Message: 167

I've just bought a pcr-1000 and I wonder how to use the packet output. I'm trying to decode digital modes with a homebrew data slicer attached to this output, but I can't get anything... The slicer has a led light to check the signal presence from disc. out, but it only shows activity when connected to the speaker jack. I used to have a WR1000, with disc. output and the same data slicer (2 level), and it worked. I've checked the output of the Icom packet jack with a soundcard based oscilloscope, but it's very distorted... Does anyone have some experience with this?

Another question: Does Win98 recognize incoming data from serial ports? With MS-DOS based applications, it works, but in Windows there seems to be no response.

Thanx from sunny Spain.

I am planning to buy a pcr-1000 and need all the info I can get about
this piece of receiver for the PC, everything bad or good is most
welcome at my email address, tnx !!
Richard.

Richard,

I considered the purchase of the Winradio or PCR1000.
I opted for the PCR1000 as there was more software available to support it.
The only other consideration was to purchase new or secondhand.
The new price is around $A990 and second hand from an Icom Dealer with
limited warranty $A600. The second unit proved a good purchase.

The PCR1000 is used daily and I have found it very satisfactory.
I primarily use the Icom software that is available for download.

The memory channels are very easily set up and I regularly back up
the .mch file to another area on the PC.

I have tried a number of alternative software programs and the one
I strongly recommend is the PCR SCOPE freeware program which
is a very effective spectrum analyzer.

It is available at: http://www.ibelings.com/pcr1000.html

I have made up a small antenna switch box with the primary antenna being a
Commercial 25-1300 Mhz vertical, the secondary being to a CB type antenna mount
So that I can use a variety of antenna (typically 28mHz amateur band) and finally
a long wire fed with coax via a balun. (it simply goes about 60 feet up into a tree)
I have a fourth position on the switch which is grounded - this provides an option
to protect the PCR1000 during thunderstorm activity.

Based on my experience, you will not regret the purchase of the PCR1000.

New PCR1000 owner with the dreaded "scan stopping" problem. ICOM world wide support center suggested trying Talk PCR to rectify the problem. Does Talk PCR allow you to switch back and forth between it and the original ICOM softwear control, or does it totally supplement ICOMS (and thus require a complete re-install to use it again)?

Would suggest they are completely independent peices of software and in no way inter-useable.

Keep us posted on the the problem though, I suffer from the "connection" problem which of course stops the scan, I assume you mean the same.

That -in a way- is true, but you would also have read (in the accompanying text): If you are a registered user this version will run with your existing registration key.
I think that implies that it is necessary to register. Once you download and install the software you go to Help/Purchasing and License Agreements (in the menu) and you will find all further details. Last year the price was Sterling 25.00, but it is possible that this has changed meanwhile. You will see if you install the software.

Frank

183. MOrse Code Decoder ?

Yahoo group: PCR1000
Date: 2001-11-02 11:49:07 UTC
From: Robby Balona
Topic: 183 Message: 183

Hi All

About 4 years ago i saw an artical in a Radio mag(I cant remember which) which showed how to build a morse code decoder using a Pll chipinterfacing into the lpt port
The project also included a few lines of code written in Qbasic to make it
work.At the time i build it and was very very impressed by its accuracy and havent been able to match its quality with today's soundcards

My question is..... does anybody know what im talking about and do they have a copy of the .bas program and circuit diagram.
All i can give you to go on is that the mag was a radio mag from about 1994-1996. The mag didn't often do projects but this edition they did

If you can help me ..Thank you in advance

Regards

Robby

184. Talk PCR

Yahoo group: PCR1000

From: chris
Topic: 172 Message: 184

Having been frustrated on and off by the ICOM s/w connection problem
I gave in and had a go with TalkPCR.

I am using an Intel PII reasonably conventional PC running Win98SE
and have installed TalkPCR 2.4.

When I go to scan with TalkPCR the thing just locks up, anybody got
any reaction with a similar experience.

Early versions of TalkPCR locked up for me seemingly at random, but 2.4 is completely stable and so, I think, was the version prior to it. I don't remember if I tried it on 98 or 95 at the time I had trouble, but I'm currently running it on ME which a lot of people seem to think is buggy (I disagree though, it's been more stable for me than 98 *but* it's running on a different system than 98.)

Also look for interrupt conflicts. Those often cause
lockups.

Hi Guys,

Are the current versions of PCR-1000 modifiable for general coverage? I need a full coverage radio to work on a spectrum analyzer program for it. Many thanks,

Pieter

Depending on the country of destination. If it is USA, no. If it is Europe
or Canada or Japan or some such, yes.

If you are in the US and are unwilling to import, and can somehow gain
credentials of a telecommunications company, the unblocked units are the
same retail price as the blocked ones.

If you get a Japanese model, there are over 100MHz worth of frequencies
blocked, but the simple removal of a diode frees it up, as of 1999 when I
was there.

I have been told that the newer US versions of the PCR-1000 are not (in any easy way) mod-able. The cell frequencies are fairly boring anyway ;-)

192. 2 antennas at once ?

Yahoo group: PCR1000
Date: 2001-11-28 20:21:12 UTC
From: Donnie@esinc.net
Topic: 192 Message: 192

Is it possible to use a duplexer to allow you to use a, say 1 mhz -
30 mhz antenna in addition to maybe a discone for the higher
frequences? Has anyone tried this, with any success?

THANKS in advance for any feedback

Donnie

Hook up as many as you want, no need for duplexers for receive only!

Yes, I've been doing that with an ALA1530 loop for HF and a Diamond
V2000 6m/2m/70cm vertical on and off for the past few years and it works
very well.

You could get some success just using a t-piece to connect both aerials
in parallel, but that will usually detune one or both of the aerials
and give you worse performance than with a duplexer.

Cheers,

Mark.

Using a T adapter can also cause a suck-out on some frequencies due to the other antenna. The only correct way of doing it is with a diplexer.

Topic: 192 Message: 196

If the two antennas will not have similar frequencies present on them at significant levels, a 'T' connector just might do the trick. It is only when both antennas have similar frequency signals on them that the phase of the two signals can interfere with one another (and coax length becomes an issue). In your case, a 'T' might work. It is the cheapest option. Just do some A/B comparisons on frequecies of interest to make sure the antenna interaction is minimal. The impedance change should not make too much difference.

Probably the second cheapest option is to use a diplexer. This obviously would work but at a slightly higher cost.

Another option is to use a passive multicoupler like Stridsberg Engineering sells. These provide good isolation between antenna ports so the antennas do not interact.

From: Donnie@esinc.net
Topic: 197 Message: 197

Thanks for the help. I was sure someone else had tried this.

The best solution sounds like it is using a Diplexer. Any
sugggestions on make, model and sources for this type of diplexer?

BTW, I recently added a earth ground to my PCR1000. It made a
FANTASTIC difference. I thought the radio did ok with HF in the past,
but adding the ground brought out signals that I had no idea were
there. It was like removing the ear plugs.

The PCR series radios works on 12v directly. You may hook a cigarette lighter adapter (Radio Shack in the US etc...) to power it. If you want to do it right, look for a filtered unit. Also, unplug it when you start the car, again to be on the safe side.

I ordered one. Hope it can be integrated to be equivalent to the scroll
wheel. Since their software CLAIMS to be able to emulate anything, we gotta
shot.

>
> What are the files you're uploading ?

An Italian control program that looks interesting. I hope it isn't buggy, it
replaces or introduces system files...

it runs the radio, lets you monitor up to 4 frequencies and plot signal
strength by GPS location. Looks very neat.

Thanks

I am sure this question has been "asked and answered" many times in the past, but I just purchased a new laptop, and there is no serial port on the thing! For years I have become used to every computer having at least one serial port, but I guess they are being phased out for the newer, faster, and popular USB & FireWire ports. My new laptop has three USB ports, and one FireWire port. So.....
I have heard that there is a USB to serial coupler out there. Does anyone have any experience with it when used with the PCR-1000? It looks as if I am going to continue enjoying my PCR-1000, I will need to purchase one of these.
Thanks for any help!
Marty

Just get a usb to serial port adapter they work great!!
Been using one with my pcr-1000 for a long time now.
I get much better communications with the radio performance with it than with a standard serial port.

I have two quad serial port PCMIA cards and run eight PCR-1000's at a time (each with a customer bandpass filter, and fed from an active multi-coupler). I use the regular serial port on the laptop to control a R-8500. The entire system is built into an oversized halliburon briefcase.

I also have another laptop where I use a single quad serial card, one port for an R-8500, one for a PCR-1000 (wired into the R-8500 discriminator output), and the third port for a microwave spectrum analyzer.

What kind of laptop do you have?
Knuckle_Head_ wrote:

I am sure this question has been "asked and answered" many times in the past, but I just purchased a new laptop, and there is no serial port on the thing! For years I have become used to every computer having at least one serial port, but I guess they are being phased out for the newer, faster, and popular USB & FireWire ports. My new laptop has three USB ports, and one FireWire port. So.....
I have heard that there is a USB to serial coupler out there. Does anyone have any experience with it when used with the PCR-1000? It looks as if I am going to continue enjoying my PCR-1000, I will need to purchase one of these.
Thanks for any help!
Marty

Looks like it's Yahoo getting confused. They are gifs of ads.

Norton didn't seem to care about them.

First of all, I bought a Toshiba 3000. Love it (with the exception of the missing serial port). One person mentioned a USB to serial coupler that they are using. Another person mentioned a quad port PCMCIA connector. Can you two give me more detail as to the manufacture of these items and where I can find them (online retailers)?

Thanks!

It's Yahoos little adverts which in html appear as intended but if your reader is set to text only they come out as attachments.

Nothing to be concerned with and Norton was happy about them but caution is good these days.

Copy and paste this url.
http://www.us.buy.com/retail/product.asp?sku=10277371
Buy dot com has a usb-serial adapter. $21.00 and approx $6 shipping.

The USB option seems easier to deal with than the PCMCIA. They both
SHOULD offer hot-swappable capabilities.

218. Griffin Technology wheel

Yahoo group: PCR1000
Date: 2001-12-20 18:54:34 UTC
From: Pres Waterman
Topic: 218 Message: 218

Hi. I ordered last week, and got today as a surprise (because they say not shipping until January) the Griffin Technology USB PowerMate wheel.

It's beautiful, well made and sexy in blue lights emanating from the base.

I wish it worked! The website http://www.griffintechnology.com/audio/pwrmate.html says that it's ". Compatible with Mac OS 9/ OS X and Windows 2000/ XP" which honestly I interpreted as "our drivers are modern enough to work with Win2k or XP" but in reality it means "you had better HAVE Win2k or XP"

I just got off the phone and they are hopeful in having Win98/ME and probably 95 drivers in a few weeks. Currently, it is recognized as a "Human Interface Device" and when you twirl it back and forth it makes the mouse pointer go right-to-left. Tech support acknowledged it acts as a one-axis mouse without the drivers.

If TalkPCR would allow tuning as the mouse is swiped left to right we would be all set. But as is, it only allows tuning as the pointer is WITHIN the tuning "knob" graphic.

It promises to be a heckuva nice accessory to the PCR-100/1000 when the drivers work. There are beta drivers that they said didn't work for crap!

Thanks

Pres Waterman W2PW

220. Re: Griffin Technology wheel

Yahoo group: PCR1000
Date: 2001-12-21 01:09:49 UTC
From: blklab97
Topic: 218 Message: 220

I used to play with making a wheel like that when making my MAME machine. MAME is a multiple arcade machine to play stuff like Defender, Pacman, 1941 etc.. Specific to an age group I know! ;)

Anywhoo.. We always had a problem making something similar to TRON for a wheel controller based on feel. We always got the wheel to work but the 'feel' was the problem. We found that the USB was nice but in DOS had problems. I don't see why it would be ANY problem with making it available for say ANY Windows machine or MAC, Linux< FreeBSD etc..

If that company is making this device from a mouse, Heck you have instantly a x axis (Left Right) and a Y axis input (Up-Down). The you have the wheel portion of the 'new' mice for a third knob/axis controller. Then even three switches (left mouse, Right mouse and center wheel click on my MS mouse).

I guess the big problem here is assignment but through Windows, you can even use the Sidewinder game controller to assign mouse movements to keyboard keys for switches and axis movements.

They way I look at it a typical mouse 'could' make this:
Volume (wheel function)
Tuning (X axis mouse input 10K Steps)
Tuning Steps (Y Axis use mouse to switch steps 10K,5K,1K,100,10,1)
(Kinda like a slider on the steps the Tuning will take)
Three mouse buttons 1-AM 2-USB 3-LSB (for shortwave)

Or assignable.. You know its easy in Windows ;)
As far as making it 'lighted' and pretty, USB has voltages through the line and LED aren't a problem there or even LEDs showing the tuning steps (10k,5K etc...)

Maybe I should have patented this above idea.. oops!!

221. AC Adapter

Yahoo group: PCR1000
Date: 2001-12-21 22:40:09 UTC
From: curt.onstott@orst.edu
Topic: 221 Message: 221

I just bought a PCR-1000 and I need to know what to use for an AC adapter (it did not come with one.) Is there anything special about the one Icom uses, or can I pick up an adapter at RadioShack? What is the current rating on the Icom adapter?

No, it's a common plug, center positive, and I have run as much as 18v
without worry or heat. Get a 12v, 1000 mA and you'll be fine

You are lucky you didn't get the iCom power cube... it's a ton!

It's so well buried I dare not move it, but,

The book says:

Power supply:13.8V DC +- 5% or supplied adaptor (neg gnd)
Power ON (PC power OFF) 0.1A
Max. Audio 0.7A
Standby (squelched) 0.6A

Mine (Icom but from UK) simply states "12V DC 1A" but I've used other adapters successfully. Seems the radio's pretty forgiving.

Subject: [PCR1000] AC Adapter

I just bought a PCR-1000 and I need to know what to use for an AC adapter (it did not come with one.) Is there anything special about the one Icom uses, or can I pick up an adapter at RadioShack? What is the current rating on the Icom adapter?

I found a bunch of twelve volt adapters on my surplus pile. First one was marked 12 volt, but my voltmeter showed it was putting out 16.3 v which is too much. Second was 12 volt, but the receiver would not run on it-- not enough amps apparently. Finally, I hooked the radio up to a 12 volt battery I pulled off of one of my electric scooters and it worked fine.

I'll see what rat shack has tomorrow.

Mine (Icom but from UK) simply states "12V DC 1A" but I've used other adapters successfully. Seems the radio's pretty forgiving.

The internal regulator is 9V so anything giving a stabile 10-13V wiill do fine. Anything above 10V just radiates as heat from the radio and excessive heat will shorten the life of your radio. I'll recommend that you compare performance with different power supplies, one of my cheap adapters was giving of a terrible noise and hum on most bands. (That one went straight into the bin!) Good grounding is another issue, the radio really likes a ground-rod.

227. Windows XP PCR-1000

Yahoo group: PCR1000
Date: 2001-12-30 02:04:43 UTC
From: blklab97
Topic: 227 Message: 227

I can not get the PCR-1000 to run under Windows XP with the Icom Software v1.31. Is this a problem with the software, XP OS or radio?

Under TalkPCR, and scanning 460-460.600 in NBFM, the bandscope does not show as such as it does in AM mode. The bandscope shows nothing and every so often in the range (near freq) it sill show a transmission but the bar only goes up say 1/3 of the first (lowest) box on the grid on the bandscope. Is this normal for the band or is there something possbily wrong with the radio?

I have used the squelch up and down fully. That is not the problem. DSP is off. It just scares me to see in the help that it may be possibly an EEPROM problem as described that the UHF/VHF freq show little of bandscope activity if the EEPROM is corrupted.

It does recv transmissions but no bandscope properties. That is my ultimate question.

Does any have/use any remote control softwrae for the PCR-1000?

I am looking for something that I can not only use for tuning but
the DSP, squelch etc. as well.

Can anyone put up those file in the files section?

Hi

Try www.javaradio.com

(only for Unix)
Good software , only downfall is you need to have a dedicated form of
internet connection. Kelly can give you a dial up adaption ,but the man
is busy and getting hold of him is a nightmare.

Else try using pcrd for linux and writing a front end in php or perl if
you can

Have not tried it myself but take a look at the text file on this site::
http://www.micosyen.com/pcr.htm

Seemingly IR remote operation is possible using this program (DOS) buta gain
I've never tried it.

Feedack would be interesting...

Bummer, Then its my system but then again I know it ain't the radio!
Its just software settings somehow.

Running it on a Dell Inspiron 8000 PIII 800 with 512MB and 32MB
Video mem. This way I stay away from any possible monitor noise.

From: proverbs_uk
Topic: 233 Message: 233

Between the R75 and the PCR1000 which one would you give the Thumbs up r Thumbs down too. As I am Thinking about buying one the PCR1000 at £299.00 that is wideband and covers everthing I need but don't like the fact it is control by the PC.

Also the R75 at £579.00 and covers most things I need but not the Extra V/UHF bands. The company "W&S in UK" I was going to buy off says the R75 is a far better radio compare, to the PCR1000 but r they looking for a bigger sale. Both radios seen to be brillant radios

I am on a budget can afford the PCR1000, but R75 would have to wait a month for my wages before I buy it.

So Thumbs up r thumbs down.

Paul in UK

I would never replace my pcr1000 with a R75!. If your into VHF
"scanning" and HF utility or Broadcast listening I would recommend
the PCR1000.
If your into serioues "week signal" HF listening perhaps the R75 is a
better choice.
Many thumbs up for the PC controll, imagine what you can do with it,
no radio can ever replace for instance the TalkPCR software.

PCR1000 ROCKS! Really nice performing receiver. Every bit of the cost of the radio went into the radio, offloading control and display to a computer and saving money there. So you are getting a pure radio, and the flexibility to have completely different interfaces/user experiences as others write software. For example, you can use a simple DOS executable (PCScan) on a 8088/286, up through some really nice (TalkPCR, Scanstar) software, and someone even has made a hardware controller.

It took me years of looking at it, wondering what the fuss was about, how could anyonewant a black box that needs a PC, I need that like a hole in the head; and then one day I bought one on impulse. It even took me a while to like it. Now, I like it so much I bought a 100 for work.

Ok, I just got my PCR-1000 and LOVE IT!! Today, I thought I would try and get advanced and hook up the audio to my laptop so that I could check out some ALE or Fax's or whatever... I switched the switch inside the radio, plugged in a mono cable and got nada! The receiver is working ok, as I can see the S Meter do it's thing. TalkPCR records the audio just fine. I can playback anything from TalkPCR audio files to MP3's, I just cant seem to be able to pass audio from the PCR-1000 to the Laptop Speakers. Am I missing something here?

Thanks in advance!
Eric

Double click the speaker on the taskbar (or goto the control panel).
Make sure that the input line-in from the soundcard is not muted as
well as the line is pluggged into the right slot (easy to overlook).

I had problems with the plug. Surprisingly the one cable I had did not work no way so made up one using a stereo plug (the other was moono) and away it went no problems after that.

The other thing sometimes happens is your mixer gets a will of it's own and mutes the input but sure you'll have checked that.

Great receiver, a shame ICOM doesn't seem to care too much about it software wise.

reagrds

Graham

No. I use a PCR-100 with a mic jack.

Most sound mixer programs have a "Mic 20dB enable" selection. Keep that off. If you have the "headphone" or "line" level option set in the radio, and you have the mic gain further reduced at the computer, you could be OK. If not, since line out is normally too high for mic input anyway, you may need a $5 attenuator cord designed to reduce line to mic levels, available at Radio Shack.

Does the pcr100 have a packet out jack? You can use that and then the
PCR-100 internal speaker will not be disabled. You will want to use that for
decoding a lot digital stuff anyway. What is ALE?

A lot of systems will not let you hear what's coming in through the
microphone or you'd get feedback.

Uh, say WOT? Your sound system hears the PCR to record, and you can play back in the laptop's speakers, but you can't hear it in real time through the speakers?

Weird

What laptop is it?

No, just the 1000. The 100 needs a mod.

Thanks

Yup! That's exactly the problem. I can hear the Icom speaker, I can hear my laptop speaker, I can recored Icom audio via TalkPCR and play it back on the laptop, but I cant listen to live audio from the icom through the PC. Im using a brand new (2 month old) Dell Latittude 1ghz/256mb RAM. I called Icon and they were totally lacking in support on not just this 'problem' but the radio itself! Although, they sure did try to help.

Im going to try that cable that was suggested and see if that helps. On another note, hooking up the audio cable to the Packet jack did allow me to at least attempt to copy RTTY...

I'm sorry to flodd the group like I have been.... :)

I just downloaded the demo of SkySweep and it works like a charm!
Audio to boot! My problem has to be a incompatibility with the Icom
software and either my laptop or W98... So, I just ordered SkySweep
as it has all the decoders that I want.

Thanks to everyone that offered help. :)

250. Source Code to Control PCR-1000

Yahoo group: PCR1000
Date: 2002-01-12 12:29:08 UTC
From: Tim Seed
Topic: 236 Message: 250

I have a rough PCR-1000 control program working at the moment -
it currently does the following

Frequency Changing, Mode Changing, Bandwidth Changing
Squelch & Volume

It soon will do DSP Module Control
ATT, NB, AGC etc Control

It is written in Visual C++, and should run on 95,98, Me and NT (sorry no XP Test box yet) - if anyone would like a copy when I have tidied it up a bit please drop me a line and I shall try and motivate myself to make the code a little cleaner.

If you use WxTrack then I should have an automated Frequency changing module (based on your list of Satallites that you track in WxTrack) working by the 20th Jan..... What I am hoping is that by employing one PCR-1000 I will be able to cover more channels of APT data than the 1 channel I currently listen to.

Tim

Thankyou all for your reply regaurding R75 and PCR1000 presently deciding about my new radio must say I downloaded the Icom Software to see what the interface of the Pcr1000 look like and play around with after a while my eyes got adjusted to the computer interface not to bad when you adjust to it might think off getting the PCR1000.

Anyway thanks again for the info everyone BYEEEEEEE to the next time

256. PCR1000 and PDW

Yahoo group: PCR1000
Date: 2002-01-15 21:49:34 UTC
From: objectory2001
Topic: 256 Message: 256

Hello all

I just got my PCR1000 and i must say that its a great piece
of radio....

I've been testing some things and one thing that dont work
is to decode POCSAG with PDW. I've tried every input configuration
in PDW but it wont decode, i can see PDW is getting a signal(not
radio signal) but its too waek forr PDW.

I've switched the switch in the PCR and using line in and iam having
no problems when iam listening throgh the pc speakers.

Anyone that can help me ?

Then iam woundering, what kind of decoder software are you using for
ACARS, POCSAG etc .....

Best Regards
// Mattias

Try using the packet output into the line in on your sound card. Make sure you have a good antenna. PDW works fine for me on a soundblaster live with a radio shack discone antenna.

261. Radio Shack Discone and HF?

Yahoo group: PCR1000
Date: 2002-01-16 05:57:59 UTC
From: tomdiederich
Topic: 261 Message: 261

I am using my PCR1000 with a Radio Shack discone antenna. Is there a way to add HF reception to the antenna? I was thinking something like a long loop of wire, but I don't know how or how long. The antenna's low range is rated at 25Mhz, it does receive the HF band much better than the little antenna that comes with the radio, but I think it still needs something.

Any ideas?

Thanks, Tom.

No, it really doesn't. Forget the "rating"... the radio has hot enough gain that if you give it too much antenna on the shortwave spectrum you may have serious overload problems.

If you pop off the top rubber cap you will see a stud. You can thread on a whip with some sort of adapter maybe. That will make more lower freq response. But just put a few feet of wire on it and see how you like it temporarily.

From: Tim Seed
Topic: 273 Message: 273

I have some Auto Go and Tune software that is available from
http://www.geocities.com/deepstar123/sattune.html
Sorry about the state of the web page - I am literally leaving to go on
holiday this afternoon.
As far as controlling the PCR goes (under Windows) I now have a moderately
good handle as to how the beast behaves - so please ask clearly (no jargon)
- what you need the PCR to do, and I shall try and have a look when I get back.
Anyone who would like a copy of the source code can get it from
http://www.geocities.com/deepstar123/source.zip
Best regards
Tim

This is pretty cool- it is exactly what I was looking for. Before bed I set my scanner to pick up the passes from NOAA 15 and 12 before I get up in the morning. Unfortunately, I usually miss something on the setup and miss my pictures. I'll either leave the squelch too tight, forget to set the bandwidth to 50, etc.

Good Job Tim, I'll have to give it a try.

Date: 2002-02-03 22:15:50 UTC
From: Rodger N. Bird II
Topic: 282 Message: 282

Icom PCR-1000 Computer controlled receiver for sale.

Frequency Coverage (MHz): 0.010000 - 1300.000 (Cellular is not blocked)

Modes: WFM, FM, AM, SSB, CW

Dimensions (projections not included): 5(w) x 1.2(h) x 7.9(d) in

Computer Requirements:
Intel® 486DX4 or later CPU (Pentium® 100 or later recommended)
Microsoft® Windows® version 3.1 or 95
Minimum 10 MB of free space on hard drive
Minimum 16 MB of memory
FD drive, serial interface
Monitor with at least 640 x 480 pixel resolution

Asking $275.00

The Icom IC-PCR1000 is in excellent condition and works fine. It is a Canada version co it has no gaps (cellular) in the receiver.

The selling price of $275.00 includes shipping costs within the continental United States.

Please email me direct if you are interested. Do not reply to this message. My email address is: rbird2@...

Thank you,

Rodger

Try www.javaradio.com.

But you will need an expensive permanent connection as the java applet
needs to contact Kelly's web site to work

286. DSP on CW

Yahoo group: PCR1000
Date: 2002-02-04 06:28:24 UTC
From: Pres Waterman
Topic: 286 Message: 286

Alright, maybe the debate has died down.

I like CW but the 2.8Khz filter is too wide.

1 Can a CW filter be fitted at all? Maybe replace the 50KHz filter with a
500hZ one?

2 Can the DSP be used as an audio filter?

Thanks

Yes, I have the http://www.griffintechnology.com/audio/pwrmate.html USB "tuning knob"

I am using it with their new beta Win98 drivers. I have the knob set to:

Turn right=UP ARROW (tunes higher in freq.
Turn left=DOWN ARROW
push briefly=mute
push-n-turn right=UP ARROW (does volume/squelch etc on TalkPCR)
push-n-turn left=DOWN ARROW (opposite)

I can say that the software is beta, and somewhat buggy. But when it works it is nice.

Thanks

I am working on that right now. The TalkPCR program uses comma
delimiters int he user files. I think I can convince Excel into
doing just that ;)

Its just the trick of the other settings such as squelch, FM volume
filters and such.. I need to find out what settings each entry needs.

294. software that works on xp

Yahoo group: PCR1000
Date: 2002-02-24 21:09:21 UTC
From: hoppy
Topic: 291 Message: 294

Hello all,

Just to let anyone know if they didn't already, the official Icom software for the pcr1k works a treat on XP. I downloaded the latest version from Icom the other day.

I also use Linux (mandrake 8.0 - QTPCR won't compile on mdk 8.1). QTPCR works very well. Does anyone else use qtpcr? If anyone does would you mind giving me a few tips please? ;-) I am also trying to set-up java radio, just a bit short of time at the moment.

When I first got my pcr I ended up with some very strange problems, which took me ages to fault find. Now the funny thing is, I ended up with EXACTLY the same problem when I connected up my mobile phone (nokia 6210) to the comm port (comm2). It is comm 1 if I use pnp. They phone and pcr worked fine, then I ran the windows update, then nothing worked off the comm port. I started racking my brains, so I played around with re-installing windows (I didn't get the same problem in Linux, I think it is due to the fact that I installed Linux with pnp turned OFF) and didn't get very far. So I then re-installed windows XP with PNP turned OFF. Guess what? I have had no problems at all since. Has anyone else had the same or similar problems?

All the best,

Hoppy

PS. Just for info I have an Advent (pc world) 6410, 20gig hdd, 256mb ram, and it boots WIN98(games), WINXP PRO, Linux Mandrake 8.0, Linux Mandrake 8.1 (and just for fun QNX 6.1) :-)

Hello,
I recently joined the group, having purchased a PCR1000.I found the group whilst searching the web for more info on the radio.I found a small item on talk pcr but it didn't give much detail,mainly download procedure.
So jumping in at the deep end,can someone tell me of a good informative site to look at for this,and an opinion on the program if you use it?
The good thing about groups is the ability to share experience & knowledge so I'm sure one of you will point me in the right direction.
Regards to all,
Mike.

Topic: 311 Message: 311

HI There
I know it's proberly been asked before. but is this wonderfully sounding radio proan to interferance from the computer, my other radios pick up every noise they can, even when well shielded.
I think the main prob being that i've never got to grips with radios mixing with comps.
Thanks for help!

Hi
Yes I have same problem, especially on hf. The prob seems to be my power pack to the laptop, on battery it is okay. Ferrite rings etc don't seem to make any difference. Always believed pc's and radios don't mix.

I haven't had any probelems with interference with
either ICOM IC-PCR1000 or WiNRADiO WR-1550e.
I use only good outdoor antennas and well shielded
coaxcables. As a precution, place the receivers as far
away from the monitor as possible.

I worried about that before I purchased the 1000 because as you say computers radiate a lot of interference, BUT, the PCR1000 is in a class of it's own, no problems whatsoever.
I assume they looked at the problem in some great depth because it is a PC interfaced Rx.

I have good news for you. Have been using the PCR1000 for 3 years now and I have no problems whatsoever. It is placed at approx 1 meter (yard) from 3 (three) PC monitors and it picks up absolutely no QRM from these. The set in itself (and the wallwart I presume) must be excellently sealed and I am convinced that any interference can only be due to QRM that enters via the antenna. This should be kept as far away from the PCs as possible and the connection with the PCR1000 should be with good coax. The only real problem I have with the set is that it only offers 2.8 kHz as its lowest bandwidth, whereas I would like 200 (or even 50) Hz for CW listening, but that is quite a different subject.

Scanning takes a lot of cpu time. You may have to stop some other
programs that are running. I have a 1.4g processor and 512 meg ram and
still can't run some programs together.

I'm suprised at your total response, because you are correct scanning software such as the Icom software can be 100% processor power, BUT, if you run other softwares they share the processor.
I am running mine on my slowest PC at 350MHz/64Mb ram with W98SE at the same time as the internet, Word & Wordpad, and occassionaly a picture viewer. Yes, it all slows up, but doesn't stop.

I normally run SETI at all times and have no problems. If I add
TalkPCR or PKterm I run into problems. With WindowsXP I can change
thread priority and do have some control. SETI runs at low always. The
other two start with normal priority and I have to change them to low
to be happy together.

321. PCRPilot Palm Software for the PCR-1000

Yahoo group: PCR1000
Date: 2002-03-20 22:22:09 UTC
From: blklab97
Topic: 321 Message: 321

I just recently purchased a Palm M100 from ebay. I tell you that making it mobile and using the PCRPilot is nice. I have seen a component kit fo rthe PCR1000 but with all respects, this was only $34.00 shipped and has Modes, Filters, Volume, Squelch Signal meter, VSC,NB,ATT,AGC, frequency steps and labels.

This also help cut down RF when serching for AM/shortwaves since my monitor is like the blob of RF.

Kudos to Geoff Wicks VK4KGL.

Just my 2 cents and please let me know if anyone else has had an experiences with it.

From: Graham Black
Topic: 321 Message: 322

Yes, I use it and suggested a few days back that instead of the construction problems, Palm users could take a short cut. Seems you got there on your own but it's a great setup, I find it works well when travelling and you don't want to take a laptop.

I had an old serial type cable with the Palm plug on one end that I used to make up the cable but that's the only fiddly bit, getting the right plug for the Palm.

But I've only used it for occasional listening, batterty consumption on my old Palm III is heavy for sustained usage.

Opps, missed it. I changed my status on this groups to no email.

I have the serial cable for it and not the cradle. It makes it easy to place the palm right on top of the PCR1K. I havent had to deal with a cradle so I dont knw really if that is good or bad. I figure the cradle may be its own little workstand as long as it is a serial cable. :)

My serial is going through a gender changer though. Figures that everything wasnt PERFECT but hey, for $34 for a M100 and $4 for a gender changer, EXCELLENT!

One thing I would love to have is the it scan the fields A-Z automatically for x secs on each channel. This would be nice on freq steps or programmed fields for say emergency comms like PD. I guess I have my RS Pro-93 for that though.

Maybe have numbers 1-13 on top of the letters A-Z so it would represent bank #1 with A-Z and bank #2 with A-Z etc.. and have 13*26 freq slots=338.

Or flipped Banks A-Z with 13 slots in each bank, you get the idea.. Basically more programmable entries.

Do you know where we can find the source code so maybe I can fool with it for such?

Sorry, can't help but why not try the author? Often find these guys helpful and they usually like to try worthwhile additions.

My setup sounds exactly like yours except I couldn't get a gender changer so made up one with a short cable, hardly ever used the cradle - one more bulky thing to heave around - so got the serial cable when I bought the Palm, oh, 3 years ago now I think. Getting close for replacement now I guess, the newer displays are way ahead.

Be interested in any new developements you find on this. it's such a handy setup.

Welcome!

Shoot, ALL MY memory banks are full. Usually when I try to remember anything it's "Error reading drive B:rain, file not found"

> I'm told the pcr has unlimited memory. The only way I can think of is
> to save the existing data to disk,wipe the memories and start again,

The radio has NO memory!

All memory is done with the control program (iCOM, TalkPCR, ScanCat, whatever)

So, yes, in a sense, the program author chooses memory management. They could have a million memories. You need to learn how the files are manipulated in the program you are using.

329. Corrupt EEPROM

Yahoo group: PCR1000
Date: 2002-03-30 00:08:44 UTC
From: cor_ff_pm
Topic: 329 Message: 329

Hi all,

It appears that my EEPROM is corrupt, based upon the signs and symptoms that I have read about (deafness in certain bands, AFC tuning upwards to infinity, etc...). Has anyone here sent their PCR's to Icom for reflash/replacement/etc.....? I figure I'll have to "bend over and grab my ankles" so to speak. Just wondering how bad it will be........

Any thoughts, suggestions, advice, etc?

Thanks,

Mark

It's about 2-3 hours labor for a full alignment. You have access to a service monitor? Want to try it yourself? Can't hurt. Get ex2099.exe software

Thanks

Anyone have a decent backup of a known good Eeprom for the PCR1000....I know there will be slight differences due to tolerances and things...but this would be better than having a completely useless Eeprom..

If a few people will post a copy of their eeprom I will post mine. I think it would be a good idea to share several good working copies of it. I backed mine up and keep several copies on floppy and CDR.

I use TalkPCR to do the backups.

Please be careful with the 2099ex program. You can screw up a good eeprom if you don't know what your doing. You can't just tweak it not using the right equipment. So don't even try unless you have them.

340. PCR1000 control via Network PC

Yahoo group: PCR1000
Date: 2002-03-31 05:32:39 UTC
From: g8osn
Topic: 340 Message: 340

Hi,

I have a modest network of PCs at home and a PCR1000 and I I work like to be able to control and hear the PCR1000 from any PC on the network.

I assume I could run a similar piece of software to that used by the many 'live' scanner sites and use the PC connected direct to the PCR1000 as some sort of server.

Anyone actually done this and have any tips, recommmend SW etc?

Thanks & 73

Brian

You can use Windows Media Streaming Services to stream the audio, any media player on your network will get it

And control it with Win VNC (Similar to pc anywhere buy simpler and free).

Hi Brian,

If you are using XP then you can use Remote Desktop which is
included in XP. In order to get sound working, just install
the linein plugin to Winamp and off you go. Iam using Remote Desktop
to control my PCR1K at my home and from my work.

First thanks to all those who have responded to my query.

I have downloaded the VNC program and have it running fine- a useful bit of SW! However, I've had no joy with the audio and a search for "Windows Media Streaming Services" has not flagged up any useful data on how to make it work.

Any help in this area would be appreciated.

Regards

Brian

Brian,

Yes it can be a swine....

Maybe now is the time to announce to the group that following the success of JAOR - AOR 8200 control software, together with total lack of PCR Lan software, I will shortly be making available beta tests of 'JPCR'.

The software is to control the PCR over a network (wan/lan/internet) complete with in built audio streaming. The workhorse 'server' end is ready - the client end is on the way.

If any members would like to beta test this software please reply direct.

It's difficult to reply direct when the "From" information is a name and not an email, so...

I would like to check it out. May I suggest, unless you want to control its distribution, that you place it in the "files" section of this Yahoo!groups website? There's 20MB to play with. I also suggest you keep all releases there, some may want or need to use prior versions.

May I say this is exciting news... for example, an office worker (with permission of course) could place the radio in a roof penthouse with network access... it is now up high, great reception, and away from computer hash.

Great work James. I have both a 100 at work and a 1000 at home... will both receivers be supported?

Thanks

Hi Brain,

Yes it has a lot of advantages - such as the one you mention.

My initial thoughts were based around the office worker, who has DSL or other permanent connection. They can connect to the radio from anywhere in the world, control it and hear it. I have built in basic password protection so a 'log-in' is required if the option is switched on.

Similarly - you pick up some really hot frequency - you could buzz your pal on the otherside of the country and let them hear it - as I will also be building a 'listen only' module. Imagine PCR users all round the world allowing access to their audio - a central web site with the radios listed.... so on so forth...

I think it's gonna be big - since i sent that mail I have had a lot of interest.

I will look into the PCR100 - I am led to believe the command structure is the same - but I am yet to positively confirm.

Imagine PCR users all round the world allowing access to their audio - a central web site with the radios listed.... so on so forth...

I think it's gonna be big - since i sent that mail I have had a lot of interest.

I will look into the PCR100 - I am led to believe the command structure is the same - but I am yet to positively confirm.

James

Subject: Re: [PCR1000] Re: PCR1000 control via Network PC

It's difficult to reply direct when the "From" information is a name and not an email, so...

I would like to check it out. May I suggest, unless you want to control its distribution, that you place it in the "files" section of this Yahoo!groups website? There's 20MB to play with. I also suggest you keep all releases there, some may want or need to use prior versions.

May I say this is exciting news... for example, an office worker (with permission of course) could place the radio in a roof penthouse with network access... it is now up high, great reception, and away from computer hash.

Great work James. I have both a 100 at work and a 1000 at home... will both receivers be supported?

Thanks

Brian,

Yes it can be a swine....

Maybe now is the time to announce to the group that following the success of JAOR - AOR 8200 control software, together with total lack of PCR Lan software, I will shortly be making available beta tests of 'JPCR'.

The software is to control the PCR over a network (wan/lan/internet) complete with in built audio streaming. The workhorse 'server' end is ready - the client end is on the way.

If any members would like to beta test this software please reply direct.

James

First thanks to all those who have responded to my query.

I have downloaded the VNC program and have it running fine- a useful
bit of SW! However, I've had no joy with the audio and a search
for "Windows Media Streaming Services" has not flagged up any useful
data on how to make it work.

Any help in this area would be appreciated.

Regards

Brian

Yeah Great software but you need a permanent INTERNET connection or the
server does not work !!!

361. PCR-1000 & Toshiba Laptops

Yahoo group: PCR1000
Date: 2002-04-09 06:13:42 UTC
From: w9lbb
Topic: 361 Message: 361

Greetings, All.

I have been using my PCR-1000 with a Toshiba Satellite Pro 430CDT. Prior to this, I was using the same machine with a PCR-100, and, using Scancat Gold, with an R71A and R-7000 (both at once; Scancat has that option).

There have been some glitches with the R71A / R-7000 combination; apparently, a serial port problem wherein it suddenly ceases to communicate with the receivers. A reboot clears the problem.

No such problem existed with the PCR-100... but it HAS cropped up with the PCR-1000.

After operating normally for a while, the PCR-1000 will suddenly lose all audio output and stop responding to control inputs to the Icom software. Once again, a reboot will clear the problem, or sometimes it will clear up if the receiver is turned off & on, and the Icom software closed and relaunched.

Instinct is telling me that the Toshiba is the problem here. Is anyone else with a Toshiba observing similar funkiness?

Thanks,

Tom, W9LBB

how dare you say such bad things about Toshiba,:-o
lol
but seriously though.....arent those signs of a bad
eeprom?:-p

not to sound stupid.....but have you tried running
other pcr1k software>? and see what the result is.??

Hi,
You like many others are suffering a probabal on-going problem with the Icom software, myself included.
I don't know why it happens and had in fact put it down to a Gigabyte motherboard, which may in fact not be the problem. It was a case of I had a number of problems with that m/b but not with an Asus equivalent.
The general concensus is to try an alternative s/w of which you'll find some in previous messages.
It might be one of those anomalies that noboby will sort until it all becomes obsolete.

Hi,

Any written software for the PCR-1000 myself I have found that the unit needs a constant signal to be sent to it otherwise it will power down after a few seconds. It is very unlikely it is the serial port that is the problem (i.e a hardware problem). You could try reducing the speed of your serial port (in the device manager in windows) incase the PCR is losing the sync on the serial signal. Failing that, ditch the ICOM software :) it seems to be the worst out there. We use the PCR-1000 with no problems at all with a Toshiba Sat Lappy but do not use the ICOM software at all.

Cheers,
Dave.

Hello Dave & Chris.

Well, I guess that software IS the most likely cause of problems here. I've frankly been a bit hesitant to use anything else because of the dire warnings from Icom, and the stories about corrupted EEPROMs.

BTW... before anyone mentions it, one of the first things I did after the radio arrived from Manitoba was make an EEPROM backup, just in case. ;o)

I guess it's time to download PCTALK.

BTW... while we're on the subject of software...

I'm currently running WINDOWS 95 on the laptop, and it's done OK by me despite the horror stories. However, I'm strongly considering changing all of my machines over to Red Hat Linux, as a non- Bill Gates alternative... he's gotten ENOUGH of my money, and he doesn't need any MORE of it! <<grin>>

Anyone here had experience with running the PCR-1000 on a Linux box?

Thanks for the assistance,

Tom, W9LBB

Hi Tom,

Unless you have previous experience with Unix system I strongly advise not switching over to it. Don't get my wrong. I think Unix is probably the best O/S out there but it is so much different from Windows and Mac OS so a constant up hill struggle. (even to just install it!)

If you have and programming knowledge it is real easy to write your own software. I knocked one up in Foxpro in an afternoon, just sending HEX to the serial port based on ICOM's control codes. As long as you get the initialisation sequence right everything works fine. I am currently looking to write an application for Windows CE so it will run on a iPaq PDA although the one we sue for the Palm is more than sufficient.

I haven't seen any software out there for Linux but I am sure someone out there has :)

David.

It's got to be worth a try, I didn't hit it off with PCTALK but that's just me and I only had a very short attempt.
My usual solution with Icom is reboot until it comes right. It can behave itself for weeks and then get playful for a few days, and then ok for weeks again.
Bear in mind this setup is running continuously 24/7. I have 98SE with no intention of progressing further unless forced by circumstance.
Yes I picked up on the backup pretty quickly as well.

Hello John.

Heaven FORBID that I should slur the honor of Toshiba laptops! This one is my second (the 430CT replaced a 410CDT that my YL now uses).

Well, I guess that software is the way I should go next.

I was suspecting that the Toshiba is the problem because none of the local gang with PCR-1000s are reporting any such glitches... the vast majority of them are using IBM.

Bad EEPROM??? Don't even THINK it!!! That's a possibility I don't even want to consider!!!

My radio is a bit of an illegal alien... the first time I fired it up it immediately sang a chorus of "Oh Canada"!!! <<GRIN>> I got the beast so I'd have an unbutchered UHF band to use as an IF range for microwave converters.

I dread the prospect of EVER having to send it to Icom for any sort of repair work.

Actually, I'd be interested in knowing WHAT (if anything) Icom does to Canadian radios sent for repairs by Americans. Are the repair centers under any obligation to deal with ECPA evasions that they may find coming across the workbench?

Oh well... if they were to take out cellular coverage from my beast, that would leave me with ONLY a (LEGAL, PRE-BAN) Rat Shack PRO-2004 and an Icom R-7000 that covers the (somewhat boring) cellphone band here... not to mention the Cushman communications monitor on the workbench?

I've noticed that folks who get hold of unblocked radios around here usually play with cellphone snooping for about a week, and then seldom go back... I mean, just how long can they stay interested in listening to the details of the sex lives of total strangers??? <<GRIN>>

73's,

Mr. T.

Hello Dave.

Thanks for the advice re. Linux. I guess I'll just have to wait for the more adventurous programming pioneer types to deal with making Linux play on the PCR-1000.

Actually, I'm already up to my neck in deep doodoo here re. op systems; the shack computer can't control the PCR-1000, because it's an overclocked Pentium Pro dual processor running under WINDOWS NT... and Icom software no habla NT. Actually, I'm not too sure that SCANCAT GOLD is all that happy with it either... a rather high rate of odd occurances. We're still playing with configuration settings on that.

My YL earns her daily cup of thin gruel as a system administrator working with both Unix and Linux boxes (she recommended Red Hat) so I'd have some support here, but to know what she's doing it would necessitate turning her on to radio... and THAT ain't gonna happen! <<grin>>

73's,

Tom, W9LBB

Are we talking UK or US cellphone use, since I assumed UK is now totally digital (I had to give my mobile brick up ages ago).
What used to amaze and irritate back in London in the early 90's is how long, (we are talking into hours), man and girlfriend could chat on a phone that was most of the time a company phone.
NB. I had to pay £399 connec etc. for mine !

on a side note.....toshiba
laptops.....t2105cs....first laptop I owned...dropped
it down 2 flights of stairs....literally..bing
..bang.,boom..all theway down...only half the screen
worked...popped open the case....and reseated a
connector....all there was to it...and second
note...what other company....has tech support...which
will tell you "we don't support linux...but BTW here
are the instructions you need to install it
properly..and here are the drivers you need".....just
a thought;).......toshiba isnt perfect by any
means...I'm just a satisfied customer...although I
think your problem is with the software....as other
people pointed out..the ICOM soft is less than
stable..kinda like windows:-p. and its exciting forthe
first five minutes to listen to conversations and get
people's ESN/MIN,Etc...but what the **** you gonna do
with it? it has no practicaluse

Hi all,

names hoppy, nick from Hopkins. I have a pcr1k, I have used it on Linux. Have a look at this HYPERLINK "http://www.google.com/search?hl=en&q=qtpcr"http://www.google.com/search?hl=en&q=qtpcr

It was very good once I had gone up the sheer vertical learning curve. That was on mandrake 8.0. I am now onto mandrake 8.2. However, due to some file system changes I cant make the software work under mdk 8.2 now :-(so I am stuck with talk pcr (which is great). I *really* love the spectrum analyser. IMHO best bit of the software.

For info my laptop 1ghz, PIII,256MB, 20GB HDD, runs xp pro, win ME (for games that wont work under xp) and mandrake 8.2.

Also I would recommend Mandrake over Red Hat especially to new users. The install is a lot easier - just stick to recommended install, get that working then add more software from there. I found RH to be a royal pain in the buttocks to install on laptops. NEVER had a prob putting mandrake 7 thru 8.2 including PCMCIA network card and win modem. But I could just have been lucky *grin*

373. Linux software

Yahoo group: PCR1000
Date: 2002-04-10 06:50:40 UTC
From: Robby Balona
Topic: 361 Message: 373

Hi

I use Linux suse 7.3 and qtpcr came with the installation disks. I loved Talkpc but when scanning it uses more processor power that the space shuttle ,so when i got qtpcr working and ran its scan function i was suprised that I could open about 10 other apps before my penguin started to strain. Now i will not go back to anything else of a windows nature.

I'm in the process of setting up my pcr1000 remotely on a hillside with a 2meg breezecom connection and an etherpad connected to qtpcr1000 software. I will let you guys know what happens.

Linux software for the pcr1000

PCRD :Command line Great, it comes with a telnet cleint to change freq)
http://www.mv.com/ipusers/cdwalker/pcrd.html

Icomlib :Like Talkpcr (URl is broken at the moment !!dont know why)
http://freshmeat.net/projects/icomlib/?topic_id=810%2C809%2C38

QPcr1k : Very simple x11 program for the pcr10000
http://packages.debian.org/unstable/hamradio/qpcr1k.html

Javarado :Web based pcr1000 software(Excellent software but you need a dedicated INTERNET connection of some type eg dial up,asdl or diginet
http://www.javaradio.com

I put it in according to instructions (I forget if there is a jumper to remove or add to enable it) BUT I will say that my DSP does not work with TalkPCR and it does with the regular iCOM software (v 1.3???)

Thanks

My built-in DSP does work with TalkPCR. However, sofar for the good news,
because I didn't install it myself: I had my supplier install it for me...

Howdy, Chris.

>>>Are we talking UK or US cellphone use, since I assumed UK is now totally digital (I had to give my mobile brick up ages ago).<<<

We're talking US cellphone use here. There is a mix of analog an digital over here.

I can understand why the UK would phase out analog in favor of digital, what with the somewhat embarassing intercept of Lady Di, and the totally GROSS one of Prince Charles!

Yeah, we heard that one over here too... ;o)

378. Re: Linux software

Yahoo group: PCR1000
Date: 2002-04-10 23:34:54 UTC
From: w9lbb
Topic: 361 Message: 378

Hello Robby.

>>>I use Linux suse 7.3 and qtpcr came with the installation disks. I loved Talkpc but when scanning it uses more processor power that the space shuttle ,so when i got qtpcr working and ran its scan function i was suprised that I could open about 10 other apps before my penguin started to strain. Now i will not go back to anything else of a windows nature.<<<

THANKS!!! :o)

So... there IS life after WINDOWS! I'm gratified to hear that Tux the Penguin is radio friendly, at least in some versions! :o)

You hit on a BIG problem that I'm having with WINDOWS and the Icom software on the laptop... running out of processor horsepower. Maybe I'm just asking too much of a little 120 MHz Pentium Pro laptop here.

One thing I've been doing (not terribly successfully) is running the Icom software, WXSat (for processing weather satellite audio FAX data), and TRAKSAT, an MS DOS program (obviously, for satellite tracking), all at once. TRAKSAT seems to be the straw that breaks the camel's back here.

When you add in the horrible "overhead" load that is part and parcel with WINDOWS, things go downhill REAL fast. Maybe Linux will help by being more streamlined and tightly written than WINDOWS.

I'm just glad to hear SOMEBODY is making Linux work for this.

Re. the remote PCR-1000 installation... interesting. I'd personally like to set one up on one of tall builings down on the University campus downtown to give better VHF / UHF coverage. I understand that the U. of Wisconsin ham club has gone over to something similar; an HF transceiver on top of a tall buildiing, remotely controlled from the shack in the Engineering building.

73's,

Mr. T., W9LBB

380. DSP PROBLEM

Yahoo group: PCR1000
Date: 2002-04-11 18:10:31 UTC
From: irsars
Topic: 380 Message: 380

Thanks to you that responded to my need for help with DSP.
I thought I had a hardware problem: when plugged in the software
does not work default error on a dll and a wowexe file, when
reversing the cable strap no errors, but no sound or no DSP button
(icon) using windows XP on two computers one 98 and a laptop on
me.

> Regards Baz G1NPN

Hi Baz,

I ordered it from Scanners Unlimited for $159, I should be getting th CD next week. I downloaded the DEMO also and so far it's really great! I've only encountered one problem: no matter what I do I can't change the MODE while using the Spectrum Analyzer or Bandscope. It's stuck in FM/W and won't change.

I LOVE the Tactical Display, it really simplifies things.

I also have a RS PRO2067 that I will be using with SPEX. I'll have to wait till I get the twoway interface cable next week though.

I think this Software will be even better as support for more radios is added.

John -.-

From: cardealers
Topic: 390 Message: 390

Why do you receive SPAM on a Yahoo!group?

Easy. The list is set so that anyone can join. "Robots" join lists and then post to them.

The owner can set the list to "moderated entry"... and a file is generated to be sent to pending members...and everyone who tries to join is sent an email requesting a valid callsign or a statement on their interest.

Often, the user ID *IS* a callsign so the choice to allow entry is obvious. The owner and moderator get an email from Yahoo! asking if the person can join. Click "reply" and they're in. Otherwise the owner/moderator waits for the email from the member giving the credentials, and goes to the "pending member" page to allow entry.

Robots do not read the mail so they don't "get" what to do. The owner cleans out any pending members over a period of time who haven't responded.

Thanks

I can't comment on the Win Radio, but I've read some good
reports on it.
I haven't had any issues with my PCR1000... I've
used both the Icom software and a couple of aftermarket
flavors. No problems at all.
However, I'm more of a casual user than a hard-core,
so perhaps that's why.

PCR1000 is brill, software a problem, perhaps a particular PC/motherboard with a particular O/S, bit of a question mark in that respect.

Robert,
\
Check out your setup in the laptop, also you can test the comm port by shorting pins 2 and 3 on the comm port or on the end of the cable with the pcr1000 disconnected then run hyper terminal and set that for direct connect to the comm port your using. whenyou connect in hyper terminal anything you type will echo on the screen to prove whether the computer comm port is good or if the problem is in the radio. hyper terminal is in programs > accessories > communications.

399. Re: [PCR1000] Is the Icom or Win radio better?

Yahoo group: PCR1000
Date: 2002-05-17 15:45:49 UTC
From: Arcticpeak
Topic: 395 Message: 399

I have both a WiNRADiO WR-1550e and an ICOM IC-PCR1000. I have the opportunity to compare WiNRADiO WR-1550e side-by-side with the ICOM IC-PCR1000, and the WR-1550e generally is a little better than the IC-PCR1000 on all bands (LW-UHF) except on the 6m and 70 cm and the 900 MHz bands where the IC-PCR1000 is a little better.
Selectivity on WiNRADiO WR-1550e is better than the IC-PCR1000, but unfortunately you can't select the selectivity on WiNRADiO WR-1550e. (Yet! I expect a plugin to be available soon for this.)
You can select selectivity on IC-PCR1000.
Sensitivity on WiNRADiO WR-1550e is also better than the IC-PCR1000 except on the bands stated above.
The WiNRADiO WR-1550e performs better as a scanner because it's faster (except in AM, SSB and CW modes) and because it got a lot of useful plugins available.
The ICOM IC-PCR1000 is better as a Weather satellite receiver, because it has a 50 kHz filter, but the WR-1550e is more sensitive in this band (137 MHz).
The WiNRADiO WR-1550e has bad image rejection from the 900 MHz band into the 70 cm band. (The problem only exists on this band and a BPF for the 70 cm band would eliminate this.)
The WiNRADiO control program is far easier to use.
I recommend you to download both the ICOM and the WiNRADiO programs and try yourself.
In the HF range the WiNRADiO WR-1550e performs better because of better filters, but the tuning is smother on ICOM IC-PCR1000.

Both the IC-PCR1000 and the WR-1550e are good receivers, but can't perform miracles.
If you pay attention and care when using these receivers you will be very satisfied, if you don't, you will be disappointed!
Pay care to use good quality coax cables and connectors, make sure the antenna is placed out of the noise field from the PC-monitor.

(I have a low radiating monitor, but it radiates in a 10 meters radius!!!)

If you are able to read Norwegian, I have a comprehensive review of WiNRADiO WR-1550e and ICOM IC-PCR1000 on my homepage:

http://iserit.greennet.gl/storli/test_av_computer_styrte_radioer.htm

It deals with using these receivers for SWL, HAM
(HF/VHF/UHF), FMDXing, WXSAT, scanning and other
topics.

I hope this was somewhat helpfull.

73 de LC2AAT Martin

400. Protocols for pcr1000 question

Yahoo group: PCR1000
Date: 2002-05-23 11:36:36 UTC
From: Robby Balona
Topic: 395 Message: 400

Hi Guys

I want to try using my pcr1000 with an etherpad. Now I have no experiance in programming for the pcr1000 but found a commands.txt file on the net.

Has anybody rigged their pcr1000 to a windows Hyperterminal and tried to send it commands that way ...will it work
Or will I break it.

Robby

Topic: 395 Message: 401

Hi !

A terminal Emulator will work fine ... the problem is, the PCR needs a rather large initialisation string sent first otherwise it will not work. I guess you can code this into a text file and then get the emulator to send the text file !

Let me know if you need any more info. I have written a program myself in Visual Foxpro and it?s pretty easy (you just have to make sure you follow the syntax of the init string and command EXACTLY)

Good Luck,
Dave

From: Paul Glandfield
Topic: 404 Message: 404

Has anyone used the PCR1000 with a TNC for decoding packet radio transmissions.Any info on the best TNC to use and interface information would be appreciated.
I've used the TNC out connected direct to line-in of a soundcard for decoding ARPS via AGWPE and Ui-view but with only limited success. I seem to get better decoding from using the earphone out of my AR 8200.

407. VB program to control the PCR1000 + source code

Yahoo group: PCR1000
Date: 2002-06-04 02:26:59 UTC
From: JJ Risch
Topic: 407 Message: 407

Dear All,

First, thanks for this great group.
Over the last couple of weeks, I have created a Visual Basic program to control my PCR1000.
It is very simple and not so fancy, but it does all the basic things quite well, including scanning.
If you are interested in getting a copy, including the source code, send me an e-mail at jjintokyo@... and I will give it to you.
Hopefully, after you see how easy it is and providing that you have the VB compiler, you can enhance it, improve it and make it look better.
Although there are plenty of good software available, there is nothing like writing your own. You can customize and make it look exactly the way you want; it's a great feeling and it adds a lot, to the fun of using the radio. At least for me :-)

I would appreciate your questions, comments, suggestions...
Let's share our code.

JJ in Tokyo, Japan.

408. VB program to control the PCR1000 + source code - ENJOY & HAVE FUN...

Yahoo group: PCR1000
Date: 2002-06-13 03:18:51 UTC
From: JJ Risch
Topic: 408 Message: 408
Attachments: 1 described; binary payloads are missing from this source WARC

Dear All,

During the past week, around 60 people e-mailed me to request a copy of my VB program to control the PCR1000. Thank you all very much !!!
So, as promised here it is (see attached file ip1k.zip). In it, you will find the complete program, including the source code. There are actually two versions, the first one in the "ip1k" folder and the second one in the "small" folder. Both versions have exactly the same program but the GUI is different. You might like the one in the "small" folder better, that is why I included it.
Because I am using COM3 on my PC, it is hardcoded in the program (ip1k.exe). But for convenience and for folks who don't have the VB compiler handy, I have created two other executable files for COM1 and COM2, respectively ip1k_1.exe and ip1k_2.exe, in each folder.

COUPLE OF THINGS TO KEEP IN MIND WHEN USING THIS PROGRAM :
---

* First backup your EEPROM. I never had any problem with mine, but better safe than sorry.
* This is only the first version, so it's not so advanced. Hopefully, within a month or two, I'll come up with something better.
* Sorry for the lack of comments in the source code.
* The signal meter is not accurate. Don't rely on it.
* Remember, you can use the keyboard to operate the radio. Page up (or "U") will go up the frequency, Page down (or "D") will go down. Insert key will switch the radio on. Delete key will switch the radio off. Escape key will exit. Look at the code for more...

I am already working on the next version :-)
My top priorities are :
- Memory, organized into banks for easy retrieval.
- Load frequency files, with display of alpha tag name (CSV, or Excel format, or ?).
- Keypad for easy tuning.
- Options page for configuration stuff (no more hardcoding).

SO PLEASE HELP ME !!!

I would appreciate your questions, comments, suggestions, ideas...

Let's share our code.

JJ in Tokyo, Japan.

409. CW filter

Date: 2002-06-16 21:26:06 UTC
From: dek_williams
Topic: 410 Message: 410

hi all , excuse me for being a bit of a thicky but i need help with this dtmf thingy, i need freqs and how do i get the thing to work even?, sorry to trouble you with this query,when do i need the dtmf to run and what do i expect to get in the ctcss decoder?, thanks.

411. AB7SL.com S P A M

Yahoo group: PCR1000
Date: 2002-06-16 21:48:28 UTC
From: cardealers
Topic: 411 Message: 411

I am sending this to the lists I am on regarding Ham Radio. I guess in a way it is S P A M about S P A M. Anyway, I am sick and tired of the constant "Wow, I just found this terrific site" crap, and especially disgusted that it is coming from spoofed identities. I would bet that the Amateur Radio callsigns/email addresses/identities of the different people sending this crap are not actually the people they would seem to be, but rather innocent people. Anyway. I did a lookup of ab7sl.com and found it to be hosted via www.domaindiscover.com and their phone numbers are: toll-free at (877) 518-4965 (International customers: call us at +1 (858) 560-9437) or email at support@... so everyone who wants to put a stop to this please call and complain. Tell them that ab7sl.com is sending S P A M. Do it tomorrow.

412. TalkPCR Question ??

Yahoo group: PCR1000
Date: 2002-06-16 22:10:05 UTC
From: hp123id
Topic: 412 Message: 412

Does anyone know when using TalkPCR, and running 1024x768, under Windows 2000 Professional, can TalkPCR screen size be made larger. At SVGA resolution, this makes TalkPCR a little bit small to look at ??
Thanks
Les

417. Frequency Database Manager?

Yahoo group: PCR1000
Date: 2002-06-24 13:25:03 UTC
From: Marty Grove
Topic: 414 Message: 417

Hello.

I was wondering if anyone had a nice frequency manager program (or spreadsheet template) that they could recommend? I want to be able to edit my frequencies in a separate file, then import them into TalkPCR while having TalkPCR scanning in the background.

I have been kicking around setting up a spreadsheet for this purpose, but thought I'd start by asking if anyone else has something that already does this.

Thanks!

Marty

418. PDA USB connect To PCR

Yahoo group: PCR1000
Date: 2002-06-24 18:25:51 UTC
From: wb4kkt
Topic: 418 Message: 418

I have just upgraded my PDA from a serial ported Palm 3 to a unit that has a USB output. Does anyone have a good source for a USB to serial converter for a direct(USB)PDA connect to the (serial)PCR1000? The net is full of converters that do the reverse, That is, they convert a serial device to USB for pluging into to a computer port. My plans are to use PCRPilot3C, found at:
http://www.users.bigpond.com/geoffwicks/index.htm

I downloaded both this single archive disk version as well as the 4 disk set and neither runs.

The display front comes up fine and asks me for my comm port but when i try to push the
'On Button' it stays on for a few seconds and then turns off automatically.

I can go to the Icom software and the radio works so I am pretty sure of my connections etc

I'm running Windows ME and even tried the 'Fix Comm' routine to force the comm port to
a normal configuration. No change

Any thoughts?

Jim

PS The screen view looks great!!

From: JJ Risch
Topic: 432 Message: 432

Hi CrazyC,

I downloaded PcrPro1k yesterday and the first time I ran it, I was like "Woooaaaaah, this program is great !!!". You put a year of work into it and it really shows. I like the GUI and it seems to have a lot of features. THANKS ! I haven't had much time to play with it yet (world cup first), but I want to try more later this week.

Now, I would like to ask you a HUGE HUGE HUGE favor. Would you be kind enough to give us the source code and share it with us. I'm sure many people (including me) would be very interested to see how some of the features were done. Also, if somebody likes "pink" more than "black" or "Comic Sans MS" more than "Courier New", no problem. They can just change and re-compile it.

Many thanks in advance and keep up the good work.

JJ in Tokyo, Japan.

Subject: [PCR-1000] PcrPro1k Download location update

It seems FortuneCity did it to me again... They disable my site whenever I upload a new program of mine...

Anywho, I uploaded all content to ICQ Free Web Hosting at:
http://104452.home.icq.com
The file is now in One Zip (2.4 megs) :)

433. Larger Icom PCR Manual

Yahoo group: PCR1000
Date: 2002-07-06 02:44:50 UTC
From: DFW1417
Topic: 433 Message: 433

There is a second Icom PCR-1000 manual which was provided for a limited time by Icom with the PCR-1000 units. This IS NOT the 16 page manual on icom's web site and it is not the small thin manual I got with the PCR. The manual I am looking for explains the use and operation of the provided Icom software. It was about 30 pages or so and in a folded stapled notebook style about 6" wide by 8" or so tall. If anyone has one could you post it to the files section.

Thanks.

Wayne.

434. Pcr Pro-1k Update

Yahoo group: PCR1000
Date: 2002-07-06 03:17:07 UTC
From: CrazyC
Topic: 434 Message: 434

Just to let you know that I just uploaded an update to my program which now fixes the Scanning problem and the Audio Recorder is working.

And for those with a WheelMouse, it might work now with Win98 and above.
Need feedback on this... Please...

Thanks,
Jay

436. all banks changed squelch settings

Yahoo group: PCR1000
Date: 2002-07-07 22:59:29 UTC
From: lmhodnett
Topic: 436 Message: 436

I need some help. I have been using my 1000 for about a year with Talk PCR and I have had no problems. Today something very unsual happened that I cannot explain. I was scanning my channels and had the bandscope on also to see possible new channels. I tried to turn on my DSP but it would not come on. I turned off the program and then reloaded it and then my channels all had to be reset for the squelch to work properly. The previous setting were in the 27-29% range. Now they are in the 57-59% range. I can scan at these settings, but I am concerned about what happened today.
Anybod have any solution to fix the problem and has anyone had this experience before??

Thanks,
Larry

From: wa6oof
Topic: 438 Message: 438

I am interested in owning this radio but i have a particular question.
If i wish to hear a station or record a station but do not/ or cannot
be at the computer at that moment, will it record? Can i set it up to
record a mp3 or wave file of a given freq at a given time? is this
possible?
thanks for your response
WA6OOF Dave in temecula.

From: scan800
Topic: 443 Message: 444

It cannot follow trunked systems by itself, but it can be used with a program called Trunker.exe. You need a second scanner with 800MHz coverage with a discriminator tap, and a 2-level data slicer. The Trunker uses the data from one scanner (via the data slicer) to decode the control channel and can control the PCR1000 to play the audio of the talkgroups that it is following. Its a lot of work to get set up, but its the coolest way of trunktracking.

Got to www.trunkedradio.net for all the info.

447. Just got my new PCR1000

Yahoo group: PCR1000
Date: 2002-07-18 00:16:03 UTC
From: n4umj
Topic: 447 Message: 447

Hello All,

After owning an Icom R10,R2 and R8500 I thought I would get another Icom receiver to play around with. So far I am impressed with the PCR1000 and I am really enjoying using it especially the band scope which is much better than I expected. I did not know it had the DTMF and CTCSS decoder...WOW! I am already liking this little receiver. I am also impressed with the superb FM selectivity and the HF reception.

First off I am using the Icom software and do like the appearance of it. I may try the PCRTALK after I work this Icom Software through the evaluation stages.

Should I back up my EEPROM as many posts talk about? Also I noticed a couple of other neat programs in the files area (Italian Signal Signal Strength/GPS Location and Spectrum Scope) Any comments on these...

I noticed my PCR1000 does run quite warm to the touch. Anyone else noticed this? Why Icom did not include any vents in the radio concerns me?(Having owned an Icom R7100 I know what damage heat can create)

While I had the covers off I noticed that there are two unused plugs (OPT 1 and OPT 2)I know one of these is for the Optional UT-106 DSP but what is the other for?

By the way the FM selectivity are superb and the HF reception really surprised me

Thanks for bearing with me on these beginer questions and any replies you send back my way.

Hi
Yes you should back up the eprom, I dont use the icom software I like the Talkpcr as you can scan all banks.
there is a backup tab on talkpcr you should backup then verify.
Thanks

Ed,

I would *highly* recommend backing up the EEPROM and the sooner, the better. It cost me $127 to have my PCR reprogrammed and realigned by Icom and these rigs do apparently have a tendency to fall out of their factory-programmed settings (I don't know how many others on this list have had this problem, but tis issue has come up several times). My understanding is that it has something to do with the rate at which the computer sends commands to the radio - sometimes the computer sends too much information and the PCR freaks out. Anyway, It's a great radio. I just wish I'd backed the EEPROM up sooner.

From: Frankee
Topic: 447 Message: 450

Hi all,

Fortunately I have never had any problems with my EEPROM, but I did back it up as soon as I got TalkPCR, which by far is my favourite program for this great radio, which -IMHO- only has a few problems:
- it should dispose of a narrower bandwidth (preferably 100 Hz) option: 2k8 is just too much for CW-use (morse) in the case of weak signals (and another one of 8 or 9 kHz would be a nice extra for better quality of strong AM-stations);
- it tends to overload in the case of strong signals (not necessarily on an adjacent frequency);
- the bandscope doesn't work in CW or SSB-mode.

Anyway, I am sure you will enjoy your PCR-1000 (in spite of these "shortcomings") just as I have been enjoying it for the past 3? years.

I was in two minds to buy a new PCR1000 with the bonito software but when I asked a supplier they said you had to pay a ?30 registration fee, so I dont think it is free.
the way some suppliers are getting around this is to charge more for the "free" bonito software and PCR bundle.
I went for a secondhand PCR1000 which Iam very happy with, and use talkpcr plus winmx.
Yes I would like the bonito software if it were "free" I do notice that the version shipped is 4.1 and the latest version is 5

If you take into account how much we in the UK pay for things (US Dollars
Converted into Pounds thats * 1.65 at the moment) you still get everything
very cheap

So stop whineing

Respectfully

Tim

True to a point Tim BUT
in the UK one company Waters & Stanton have had the honesty to post 2 pcr1000 prices £329 inc bonito software
£299 with Icom software, so others can't say its free!!
HOWEVER I cannot see on the bonito website £30 for the software, I recon if they sell the software at £30 they would get plenty of buyers

From: DFW1417
Topic: 454 Message: 459

I have sent another email to HRO discussing this situation since they
have dropped the PCR1000 price by $20 in the last 20 days when I
ordered my unit. I am demanding they either upgrade the software,
give me the discount price of $329, or both. It is beyond my belief
that they did not know of this price change when I purchased my unit
20 days ago. This is ridiculous!

Wayne.

462. Two different prices on PCR1000 now.

Yahoo group: PCR1000
Date: 2002-07-22 01:51:58 UTC
From: DFW1417
Topic: 462 Message: 462

Apparently most dealers are now going to 2 different pricing strategies. $329 for the PCR with the Icom challenged 1.31 software and $375 for the PCR with the Bonito software. I really wonder if Icom is charging the dealers at a 2 tier price level or if this is being dealer generated due to demand. On the Icom America web site they state they are no longer doing coupons but are cutting prices instead. Yea right! Looks to me like they are raising prices by $46 on the latest PCR and recognizing the inferiority of their software provided originally and discounting it. I am very happy with the PCR1000 but feel ripped off again by Icom making this change and saying they are discounting prices out of one side of their mouth and raising them from the other! Since they are recognizing the fact that their original software was lacking they should have to upgrade software for ALL PCR-1000's EVER SOLD with that defective software since they are correcting it now. That is my 2 cents worth.

Wayne.

We went a similar route some months ago and repeat the correspondence here below. My query was the compatability issue with new versions of Windows.

Hi All

I queried the situation with Icom UK regarding the software compatibility issues and the correspondence below ensued. I think it shows that at least Icom UK while still treading carefully are at least being aware of the problem and making an effort to do something about it. One does wonder though what would happen in the event of EPROM corruption while using RadioCom. I assume the special price is available against units purchased in UK.

Would be a shame if the PCR1000 was to disappear. I use mine in a very limited way compared to some of you guys but it’s such a very versatile unit. When I bought mine it was a toss up between Winradio or the PCR. The PCR won on the portability aspect as Winradio at that stage was ISA slot only, the ICOM being the only radio of its type.

I’m not sorry I bought it; I think it was the right decision at the time.

Hope the info below helps somebody!

Graham

We are supplying the RadioCom software with all new IC-PCR100 & IC-PCR1000 units as we have tested this & are 99.99% confident with it.

The "talk PCR" site also offers I believe a tool to back-up the EPROM contents. While we have not tested the "talk PCR" solution it appears to be OK.

The only current 100% safe method is to revery to a version of Windows that is compatible with the original software.

Thanks Matt for your reply.

A bit confused though - I've been hearing all sorts of horror stories about EPROM in the PCR1000 being corrupted by third party software. Certainly IUSA specifically preclude any responsibility on their web site. Am I to assume that IUK are happy to stand behind the packages mentioned? Just that being where I am any problems of this nature assume somewhat larger proportions than being in Europe or US.

Thank you for your E-mail.
At the moment there are 2 options available :-
1. Purchase the new software RadioCom V 4.0 (dongle protected) from IUK at the special price of GBP 35.25 inc. UK P&P.
or
2. Visit the following site mahy.demon.co.uk & download the trial software "talk PCR" - after the trial period you can decide whether you wish to purchase the full version. Regards

Great Product, Shite company... Icom have a crappy attitude with just about anything to do with the PCR1000....eg command sets, prom setups, software !!!!!

....Ha .... try getting your PCR1000 serviced !!!! good luck.

See what little or no competition does !!!

Hi
Iam really happy with my PCR and the failing has always been with the software, especially now I have xp.
I think the talkpcr is the best software out but really like the radiocom software (downloaded the demo)
if the dongle can be bought for the price of ?35 then I would buy it, just wondering where it fits on the pcr, is it in the packet socket, and have looked on icoms site (uk) but cant find out where to buy it, so have emailed them.
maybe things will get clearer!!

We are supplying the RadioCom software with all new IC-PCR100 &
IC-PCR1000 units as we have tested this & are 99.99% confident with it.

The "talk PCR" site also offers I believe a tool to back-up the EPROM
contents. While we have not tested the "talk PCR" solution it appears to
be OK.

The only current 100% safe method is to revery to a version of Windows
that is compatible with the original software.

Thanks Matt for your reply.

A bit confused though - I've been hearing all sorts of horror stories
about EPROM in the PCR1000 being corrupted by third party software.
Certainly IUSA specifically preclude any responsibility on their web
site. Am I to assume that IUK are happy to stand behind the packages
mentioned? Just that being where I am any problems of this nature assume
somewhat larger proportions than being in Europe or US.

Regards

Graham Black

Thank you for your E-mail.
At the moment there are 2 options available :-
1. Purchase the new software RadioCom V 4.0 (dongle protected) from IUK
at the special price of GBP 35.25 inc. UK P&P.
or
2. Visit the following site mahy.demon.co.uk & download the trial
software "talk PCR" - after the trial period you can decide whether you

wish to purchase the full version. Regards

466. Software problem

Yahoo group: PCR1000
Date: 2002-07-22 15:33:28 UTC
From: richardg3ugf
Topic: 466 Message: 466

hello

My laptop computer crashed and Windows 98 was replaced by WIndows 2000.
Much to my annoyance my Icom PCR1000 software no longer runs.

I particularly wanted to keep it working as I use this equipment to display "Virtual Radio" at public demonstrations and for Educational training purposes.

I have obtained Radiocomm 4 software but it's not the same, it doesn't give me the option of a choice of radio front panels that I need.
It all looks too hi-tech for the general public and doesn't grab interest from young people.

Has someone come up wiith a patch?
What can be done? Icom know it doesn't work but can they be persuaded to do anything about it?
Do I have to sell my gear and get a Win-Radio ?

Answers please

Richard G3UGF .

Richard,

I am running the ICom software for the pcr1000 on windows 2000 , pentium 1.8 with no problems, try to uninstall and reinstall.

Nah, works fine with Win2K. You may, though, have to set up a new port as 2K doesn't create unnecessary ports. Trying going to add new hardware, then add a standard serial port. This will usually then be called COM3 or COM4. Direct the software to this port. COM3 is the same as plugging the PCR into the first serial port on your PC and COM4, port 2.

This has worked for me in the past and should be the only thing that could be stopping the software working.

Good Luck.
David.

471. Fw: [PCR1000] Software problem

Yahoo group: PCR1000
Date: 2002-07-23 01:00:56 UTC
From: John M Baltz
Topic: 471 Message: 471

This may help

Why do 16-bit programs no longer run on a Windows 2000 system after I install Service Pack 2 (SP2)?
Win2K SP2 introduced a program compatibility feature in the Windows NT Virtual DOS Machine (ntvdm.exe) that can prevent some 16-bit applications from running. If you receive the following error message, your program is experiencing this known problem:

<Program> caused a General Protection Fault in module KRNL386.EXE at 0001:6382
Choose close. <Program> will close.
To resolve the problem, perform the following steps:

1.. Start a registry editor (e.g., regedit.exe).
2.. Navigate to the HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\Session Manager\AppCompatibility\NTVDM.EXE subkey, then press Delete.
3.. Click Yes to the confirmation.
4.. Restart the computer.

You can order windows software through your Icom Dealer now for the PCR-1000. The Icom part no. is BON CS40. List price is about $70.00 and Icom has it in stock although most dealers will not have it yet.

There are now 2 PCR-1000 packages available, one with Icom 1.31 software and one with the Bonito Software, each priced accordingly. There is NO UPGRADE POLICY, however you may purchase the latest software by the part number above through you Icom Dealer.

Good Luck.

Wayne.

Hi Dek
you should go for it, I emailed Icom and got the email below
and on the next email he told me it was the complete software & dongle I
just had to send them the serial number.
How did you get the price you did?

Dear Sir

Radiocom4 software to existing PCR1000 users at a special price of GBP 47.00
inc VAT.

Regards

Chris Ridley

476. Radiocomm 4

Yahoo group: PCR1000
Date: 2002-07-27 14:30:07 UTC
From: G3UGF
Topic: 476 Message: 476

After experiencing problems with my Icom software (can't get it to run on Win2000) I obtained Radiocomm 4

It's OK but very. very disappointed that there is no virtual radio display .

The one big thing I wanted it to do was decode CTCSS tones for me and it appears to have no facility built in that I can find. that's why I must get the Icom software to work again or sell the radio.

The display is too crammed packed full of info for my liking

There is a lot of audio shaping available via the sound card - ADSP etc but it's a wasted on me as I have all I need in the radio.

It is capable of Tx/Rx with a list of other rigs in the menu which list and lots of digital mode programmes built in to the software SSTV.FAX,RTTY etc.
The only one requiring the dongle adaptor in the back of the PC is the ICOM PCR.

It has all kinds of possibilities with HF frequencies already written into memories for FAX RTTY etc.
You can select to install Amateur or Marine versions of the programme, they are both on the CD.

Help instructions could be better .

It takessome getting used to and you have to figure quite a bit out for yourself (haven't done it all yet not enough time)

Richard G3UGF

Others have got the Icom software to run without problem on Win2000,
maybe you need another computer, not another radio! The PCR-1000 is
THE BEST!

:-)

The Radiocomm 4 software also requires a bit of hardware i.e. a coded
dongle plugged into the PC before it will work .

487. VB program to control the PCR1000 + source code

Yahoo group: PCR1000
Date: 2002-08-02 02:57:48 UTC
From: JJ Risch
Topic: 407 Message: 487

Dear All,

First of all, I want to thank the people who sent me ideas, suggestions, comments or simply words of support.
Thanks to you guys, here is version II of IP1k. You'll see that it is still very much a work in progress, but some nice features have been added since last time, so I thought that would deserve an update.

Some of the new things you might enjoy the most :
- Keypad for easy tuning.
- Tuning knob for fun tuning.
- Memory presets to save your important frequencies.
- A different GUI using tabs, so we have more room to play.

You can download the zip file here :
http://w1.316.telia.com/~u31626584/dl/index.html

Many thanks to Patrik in Sweden for letting us use his web page :-)

As always the source code is included, so I encourage you to experiment and add your own features.
I would appreciate your questions, comments, suggestions...
Let's share our code.

JJ in Tokyo, Japan.

493. antenna whip

Yahoo group: PCR1000
Date: 2002-08-03 11:36:14 UTC
From: darvuk
Topic: 493 Message: 493

Hi Group
I will be receiving my pcr1000 next couple of days,i already have the talk pcr software loaded on my laptop, i will be using a discone for vhf-uhf,will the suppied teliscopic whip be ok for the sortwave bands or should i buy a dedicated antenna, i have a rather neat piece of kit that allows the user to use two antennas one for sortwave and one vhf-uhf no switching from one band to the other it does it all for you, (DUPLEXER/ANTENNA COMBINER DPX-30) made by RF Systems real piece of quality kit, so before i go out a buy a dedicated sorwave antenna will the teliscopic whip do for now just for shortwave !

many thanks in advance......dave

Topic: 493 Message: 494

Hi dave,

The supplied whip will only be useful for local HF/VHF reception. It is my experience that any piece of whire attached to your receiver is better, ofter even for VHF reception. As a consequence of a better antenna, you however risk overload to your receiver (causing stations and noises to appear at places where they do not belong), which is one of the few flaws of this receiver. In this case the attenuator (the ATT button in the TalkPCR screen) is a very useful feature.

Congratulations, BTW, not only for getting the PCR1000, but also for TalkPCR, which IMHO is the best software for this receiver.

495. just found new website

Yahoo group: PCR1000
Date: 2002-08-03 12:37:46 UTC
From: Pres Waterman
Topic: 495 Message: 495

Ok, so JUST HOW would the moderator be able to determine those obvious JERKS and IDIOTS from the rest of us ahead of time?

Good thought, but in REALITY it DOES NOT WORK and just creates more work for the person running this group!

Extremely simple. The owner sets the list to "moderated entry"... the first post of any new member is moderated. That means the post is emailed to the owner, who merely replies to it to approve it. Then, once the person has been shown to be legit by having asked a pertinent question the owner/moderator sets them to "unmoderated" and from then on they are in normally.

SPAMmers do not ask relevant questions about the topic. So, their message is caught in purgatory, the owner, instead of approving it, deletes it and bans the offending member.

List members never see it.

Thanks

Keep in mind you should maintain the 50 ohm impedance for connected antennas especially with the PCR-1000! If you don't you will experience a HOT running unit. The further you deviate from the impedance match the HOTTER it runs. If you have a 50 ohm match with large diameter 50 ohm coax you will experience a much cooler running unit. Just a tip.

Wayne.

These people are NOT stupid. I ran several groups and sometimes they join get approved send a normal message then at a later date flood the group with spam messages etc. Then you ban them and they just rejoin at a later date with another id and repeat the scenario. All it becomes is a big headache for the moderator since most who join are legit.

499. Windows XP and ICOM SW

Yahoo group: PCR1000
Date: 2002-08-03 18:23:24 UTC
From: g8osn
Topic: 499 Message: 499

Hi,

I am trying to bottom out the problem of running the standard ICOM v1.31 SW on XP.

I don't claim to be an expert in this are but there seems to be a lot of differing views- ranging from it will never work, you need to 'tweak' things, to it works fine.

So, it strikes me that if we can collect some real observations it may be possible to determine the real storey.

So here are my experiences to date:

Copied the files in the application directory from a working (Win 98) setup and tried to run the program after a pointer from one of the other newsgroups that the issue was one of the program 'finding' the correct dll type files.

Ran up the program and added the 'missing' files one at a time, rerunning each time until no errors came up specifying dll or ocx files missing. I placed the 'missing' files in the application directory as (in other versions of Windows) this is OK.

After adding about 3 or 4 files all seemed to fire up but only to hang trying to access a mch file (the memory channel files).

Anyone else seen this and have any ideas?

Hello DFW1417,

I don't for a minute believe this, but if I get a reasonable explination I will monitor the case temperature with a 50 ohm terminator and also with it removed (should be darn close to infinate).

I think what you may be confusing here Wayne is the importance of a transmitter to see a proper load.

By the way my PRC-1000 case is only slightly warm to the touch and the area it is the warmest is on the top toward the rear (the area around where the power and BNC come in).

Saturday, August 03, 2002, 8:18:19 AM, you wrote:

But it is true, Bruce. The fact that I didn't mention it in my earlier mail, is because I didn't remember how hot my PCR-1000 was, before I used an MLB to feed my antenna. If yours is "slightly warm" that si OK, mine was unpleasantly warm at first.

The subject was raised some time (like 2 years?) in this mailing list. I tried to find the relative thread, but I have over 2,200 messages in the relative directory, so I'm afraid I would be spending all evening looking through the messages.
Maybe some of the original posters can fill in the details?

Frank

503. Re: antenna whip (now hot PCR with non 50ohm)

Yahoo group: PCR1000
Date: 2002-08-03 22:10:55 UTC
From: Ubbe
Topic: 503 Message: 503

If I remember correctly, it was some fault with the antenna or roof
that it was installed to, that had a leakage to the mains voltage
and provided a small current to the PCR1000 thru the antenna cable.

When the cable where replaced by a 50 ohm load at the scanner, the
current where also removed and the PCR run cooler. If you use a MLB
it also will isolate the antenna from the scanner with it's balun
transformer. It is totally impossible that a 75 ohm or 25 ohm
impedans connected to the scanner would make it run hotter.
Of course, my memory isn't at it's peak and I could be embarrissly
wrong that would make me stand corrected at a later stage.

Ubbe.

I do not believe impedance differences will make any perceptible change in running temp. Re sort of anteena to use, a long wire (if matched) should do best on shortwaves, I have had surprisingly good results on HF/VHF with a discone.

The Diskcon will work on all....inc SW and HF....the Pcr 1000 tends to overload if u use to longer wire...I have 100 meter (EtoW) Wire as well as a 20 ft wip and diskcone....I find the wip or Diskcone are best but the long wire is great for MW Dx if your into that

I only vaguely remember this from the last time it was discussed here,
but didn't that theory turn out to be something to do with the thicker
coax acting as a better heatsink than the thinner coax. In other words,
doesn't RG8/RG218/W103/etc. carry heat away from the radio better than
the thinner RG58/etc.?

Cheers,

Mark.

U> Of course, my memory isn't at it's peak and I could be embarrissly
U> wrong that would make me stand corrected at a later stage.

U> Ubbe.

That is an explanation I can accept.

Just as a test I did tape down a thermocouple to the warmest part of my PCR1000 and measured it with my antenna system connected, no connection and with a 50 Ohm terminator (Tektronix 011-0123-00 terminator borrowed off a spectrum analyzer).

The temperature resolution of my Metex meter is 1 degree Centigrade. This is good enough to see the temperature increases or decreases we are talking about here.

The antenna system I have is primarily for VHF and UHF. The antenna is an Icom discone (N connector at the antenna). Feedline from the peak of the roof to the basement shack is Belden 9913. At the basement end of the 9913 I knock down the 88-108 FM broadcast band with a Stridsberg FLT201A and distribute the signal to four devices using a Stridsberg MCA204A multicoupler. The PCR1000 is one of the devices.

The antenna system is in theory 50 Ohms but at what frequency?

This is true with most any antenna. If I had a quarter wave ground plane antenna cut for 132 MHz and scanned at 132 MHz this theory would say my receiver would run at normal temperature. If I scan at say, 30 MHz the antenna now looks like a poor match and the receiver should now heat up a bit. This just does not make sense.

To cut to the chase, my experiment gave me 33 to 34 degree C readout with or without an antenna or 50 Ohm load. So no extra heat with an improperly matched input.

I like a mystery like this but in my observations and with my radio it does not heat up. I try to keep an open mind to everything I read or hear but on the same hand, question everything too.

(This wasn't something for "Stupid Scanner Tricks", was it?) :o)

I tried to run the original icom supplied s/w that came with the pcr on XP -
it didn't work. So I went to icom and downloaded the lates version, unzipped
them both into the same folder on the root drive (e:/ in my case) then ran
the install programme. no probs at all. i dont know what is different from
the original supplied s/w but obviously something is.

hth,

Nice setup Bruce!

Nice research into this puzzle too.......

I am a new owner of a PCR1000 and the heat was the first thing that I
noticed. I know electronics are rated into the high temps but it seems to
me you could extend the life of the components by keeping the operating
temperature a tad lower. I was surprised that the ICOM PCR1000 case
had no noticeable ventilation holes(except for incident openings around the
connectors?)

I also have an ICOM AH7100 Discone and find it to be a superb antenna.
I am curious to know in your setup, as described above, the Stridsberg
would seem to block the HF band as the MCA204A does not go below
the 25 MHz. Do you find this to brickwall cut off the frequencies below
25 MHz or does it let some HF leak through.

I am currently designing a monitoring setup and like the features of the
Stridsberg Multicoupler MCA204A but have to find a way around the
HF limitation to accommodate the PC1000. My other receiver has
seperate inputs for HF & VHF-UHF. I may have to use a combiner
or a switch(last resort) to inject the HF with the VHF/UHF signals to
the PC1000.

Last month I posted re problems running Icom latest software with
Win 2000.
Tried most things I have seen, including downloading from Icom USA .
no good.

Thefollowing error message comes up when the laptop tries to
handshake with the receiver, any clues?

"General Protection Fault in module OLE2DISP.DLL PCR1000 will close "

Can anyone enlighten me aas to what is happening , if I know I may
be able to get some help to cure it .
The general opinion from the list is tha it should work ?

Richard G3UGF .

One of the main reasons the PCR is running hot is found in the powersupply.
The PCR needs about 9v 1amp, but the powersupplies delivered with the unit is of cheap type and gives
about 14-18v. High temp will not damage the unit directly, but indirectly as it speeds up the dry-up the electrolyt in the capacitors. Large temperarature variations is never a good thing for electronics in the long run.

If you use your PCR for long times i recommed a stabile powersupply with abt 9-11 v (you have to test what voltage gives stabile operations on your unit) and put some high rubber feets or something else under, so air can circulate freely. An old heatsink can find a new use on top of the PCR.
A rigid and solid coax also draws away some heat from the unit. (the impedance does'nt matter affect temp)
and also give lower signal loss.
/SM1TDX
(own two PCRs with DSP)

The PCR1000 is running cooler than my Pro2006 (40 deg C in it's hot
spot).

EB> I also have an ICOM AH7100 Discone and find it to be a superb antenna.

For the most part it presents a brick wall. Strong signals do get
through a bit.

EB> Ed
EB> N4UMJ

That is the main drawback of this current configuration. Not a good
HF monitoring setup. I rarely scan HF but if I am tuning HF I will
park on a frequency to listen in. With my monitoring habits it would
be handy to simply place an A/B switch to select HF via a separate
antenna (not sure if external attenuation would be required) or VHF
and above from the multicoupler. I am not sure exactly how I would
go about setting up a system to multicouple DC to daylight.

I might add that my location is close to several FM broadcasters plus
the majority of 2-way and paging systems. The prime location for any
sort of VHF and above transmitting is a few miles away. I do suffer
from intermod that is generally a mix of our local 158 MHz pagers and

the WX on 162.55 MHz. I have given some thought to trying a coaxial stub tuned to the pager freq and see if I can knock down the intermod.

I guess this is a problem for broadbanded receivers in dense RF environments. I wonder how ohers have resolved intermod.

I may look into a seperate adjustable DC Power supply
then. Thanks SM1TDX for that suggestion...

> The PCR1000 is running cooler than my Pro2006
> (40 deg C in it's hot spot).

I guess the thing that bothers me is the small PCR1000
enclosure and all that collected heat. My R8500 has vents
on the top and bottom to let the air flow through although
it doesn't seem to generate that much heat. The heatsink
idea sounds good although I don't know how well the steel
case would transfer heat to aluminum though. I would be
tempted to run the PCR1000 with the case off but the
shielding may be compromised.

> I am not sure exactly how I would go about setting up
> a system to multicouple DC to daylight.

An antenna usually doesn't have coverage from HF to UHF
so coupling or switching is the answer for a single port receiver.
I have a Mini-Circuits coupler that has coverage from 100kHz
to 1 GHz that I am going to experiment with the summing of the
output of two antennas. Of course there is a 3 db insertion
loss but it certainly has to be more efficient than the improper
antenna.

I must admit I'm jumping back in well into the discourse, but, out of interest, having sent 'I wouldn't expect change of op temp with change of antenna (this is passive RF Rx, not RF PA)', I've had a temperature probe on the warmest spot on the RX and it's reading 32.5 C. The Rx is half on a window cill with no circulating air, room ambient 26ish.
I would agree that the ext power supply could be very cheap/cheerful/variable, and there is regulation internally which could be the source of most heat.
NB. have been running this 24/7 for over 2 years with various antenna inc a mismatched long wire and have never actually noticed any 'hot' spots.
Bit of a puzzle for those that have.

Topic: 517 Message: 523

Hello chris,

I see your PCR1000 temperature runs very similar to mine. My ambient
is 25 C and the highest temp I have seen on any part of the PCR1000 has
been 34 C. The lowest part is 31 C.

To the touch this feels just slightly warm. I have no concerns about
this temperature range. As I mentioned in a privious post my Pro2006
runs at 40 C in it's warmest spot. I am not overly concerned about
that. I do agree that cooler is better for component longevity.
When I was running an R7000 that did have an operating temperature
that seemed a bit on the high end (sorry I don't have a measurement
for reference).

One thing I have not tried but think could contribute to an elevation
in temperture (I would not expect much of an increase) would be to
drive the audio loud for an extended period of time.

If my receiver did seem to be too warm, I like the suggestion of
mounting or even setting a heatsink on top. Using a fan to blow off
the heat would add to the effect.

It would be nice to know how hot other's are running. At what
temperature do you start to consider that something should be done?

I took the words "& MCA204A" off of the subject line as it contributes
nothing to the temperature. I don't want to misrepresent a product I
am pleased with.

I wonder whether the internal jumper that selects between line level
and speaker level audio out has anything to do with the temperature?
Maybe when it is set for speaker level the audio amp is driven a little
harder so generates more heat?

Cheers,

Mark.

Hi Bruce,

It would be interesting to get some other figures, unfortunately a lot don't have temp measure equip on board.
The thing is now sitting in bright sun and temp up to 37, but no prob.
Yes the AF could bump the temp up significantly, I have the AF linked back to the PC for vox recording so it's got no excuse to get hot for that reason.
Regarding expected temp, I really can't answer that, I was surprised how 'cool' the 1000 did run, I expected it to be elevated by the power regulation and closed case, but, my cheap and chearful plug in supply might be erring to a low voltage.
Given that we only get cheap and cheerful transformer steel these days it seems quite common to get digi boxes and the like running up into the 50's, but they have got the transformer inside, so no specific answer.
Wish you well, chris

Has any one made a program for controlling the
WiNRADiO WR-1550e or the ICOM IC-PCR1000 from the
Hewlet Packard HP48 series calculators?
If so I'll will be very interrested in hearing from
you!

Well all this over Hotness of the PCR 1000...All receivers get hot at some stage....the PCR only heats up if u leave it on for a while...If you allow ventelation its ok....Check your Monitor temp bet its hotter than the PCR....and any old Valve set....all transistors heated up (Hence Heat sink etc)....Nothing is new this problem has been around from Day 0 ...its all to do with good old OHMS Law .

I spend time Dxing and listing not pulling Icom to bits ever noticed how the Reception is Down on your S meter if you use any other Programes ....to Controll the PCR 1000. Im now over 100 Countries on MW and 200 on HF in all 2,00 QSL cards so if you have PCR 1000 use it dont abuse it

Cant understand your problem with the PCR-1000....I have had it running just fine on Win2000 and now have it running on WinXP...sounds like you may have a corrupt or out of date file on your system....
I have tried all types of software available for the PCR-1000 and have had no probs with any of them.....I tend to use IcomControl but have ine or two others still installed for when i fancy a change of scenery :-)

IcomControl.exe is in the files area of this group...

I also use PCRPro1K quite alot...this is new software and looks real fancy...nice and easy to use also..

Maybe an idea to try one of these and see if you get the same error message..

Hi Richard,

I am running ver 1.31 on win2000 with no problem and it installed with no problem, you might try running norton windoctor to clean up your windows also go to www.microsoft.com and click on support then knowledge database and do a search on "General Protection Failure in OLE2DISP.DLL " it might have the answer for the error. Also make sure that the serial port that you are using in the program is valid in your hardware.

Hope that helps.

Hi Dallas,
I take it with that number of QSL's that you have no trouble using yours on
MW? Do you have the DSP module fitted and if so does it make a noticable
difference - and is it worth me getting one?

r> anybody help,hows can i get my files from talk pcr to say word format
r> or will i have to it manualy.

Your fql file that contains each channel bank is a simple comma
delimited ASCII file and will look something like below.

0155.595000,05,01,Chan 2,90,82,25k,80,0,0,0,0,1,PP,Duluth, 0.000000,1A,0,00,
0155.640000,05,01,Chan 1,90,82,25k,80,0,0,0,0,1,PP,Duluth, 0.000000,00,0,00,
0154.310000,05,01,Fire Primary,90,82,25k,80,0,0,0,0,1,PP,Duluth, 0.000000,2A,0,00,
0155.475000,05,01,Chan 4,90,82,25k,80,0,0,0,0,1,PP,Duluth, 0.000000,00,0,00,
0155.415000,05,01,Primary,8F,82,25k,80,0,0,0,0,1,PP,St Louis County, 0.000000,00,0,00,
0154.070000,05,01,Fire Ground,90,82,25k,80,0,0,0,0,0,PP,Duluth, 0.000000,00,0,00,

I was able to open an fql file with Word97 with no problem.

Am I missing the question?

You will end up with information that might not make much sense in
printing like the volume and squelch settings.

For an explanation of each field look under TalkPCR - help - fql

Yes and it does help especialy in a city area......but I live in a DX'ers paradice beside the sea, and in the bush away from QRM and have room for experimenting with antennas, but the Pcr1000 does tend to oveload on Short Wave (HF) if antenna to long.

But in the UK (West Sussex) when I got it worked well with a 30 ft wire on HF and a Sky Scan Wip on VHF/UHF an example was 5680 usb Kinloss resque , or Radio NZ on 11.710 in those days ('87)

Topic: 542 Message: 542

Hi everyone, Today was a great day for me as i took delivery of my PCR1000 with the UT-106 DSP fitted and have been playing all day.

I had everything set up just waiting for my little black box to arrive. now i dont know how anyone else has theirs set up but this is what i thought would be best for me taking into account that my garden is very small and i live in a 2 bedroom detatched bungalow.

So a long wire was out of the question,a vhf-uhf discone is up on the chim stack one of those super types with a whip on the top so that was ok, but my problem was shortwave i looked around for ages to see what i could get to fit in the loft.

And by chance found this, Its called a passive electro-magnetic field EMF antenna from RF systems freq coverage 100 kHz-30 MHz Imdedance 50 ohms only 5 mtrs long and bloody hell is that good picking up signals wordwide.

Iv'e connected that to a DPX Duplexer/combiner also from RF Systems along with my discone so i now have continuous coverage without the need for switching.

I din'nt even bother loading the icom software i went for the talk pcr version 2.4 software, That is just simply the best with 500k bandscope and shows the freq as you move the mouse.

I'm sure lots of other people like it too, is there anything i should know any tips e.t.c i've been reading lots regarding the heat which the unit produces mine seems fine it's been on all day with no problems maybe it's just because it'a new ?.

ok thats it from me for now as i need to play some more, thanks group hope i have'nt bored you to much.....Dave

Good Luck....I think the Diskcone will be as good as anything.....try 15.240 on HF at 23.030 to o7oo UTC and if you get Radio Australia your ok ....and dont forget 8.867 (usb) a real test for antennas its the Auckland Radio/Brisbane/Nandi etc South Pacific Air Hook up.....
If you get these dont alter anything your doing ok .

I have no interest currently in Win XP but have noticed that a fair number of people on this list have trouble with XP compatability and their traditional software. I am on a PC Mag mailing list and I noticed in the current offering the following which, if it does do what it says, and PCMag normally get it right, may solve a few problems for people. Couldn't check it out myself as I'm still on 98SE but hope it helps somebody...

"Solutions: Windows XP, Meet My Favorite Old Apps

Microsoft spent a lot of time telling us that Windows XP was an operating system that, unlike its 9x predecessors, was built from the ground up, not on top of the DOS kernel. To emphasize the point, the company dropped DOS compatibility mode from the OS. Many people thought that meant that Windows XP wouldn't be able to run DOS-based applications. Au contraire. You can actually make those applications run in Windows XP quite easily, as you can older applications that may not have been road-tested for full XP compatibility-- if you know what to do. We do, of course, and we want you to know. To get all the details on how to make your apps more compatible, check out our Solutions article.

Volume slightly lower than midway. (If you have a high
output setting)
50 kHz filter on, FMN.
Tune to one of the following frequencies:
137,5 MHz
137,3 MHz
137,62 MHz

Martin

548. icom pcr 1000 software

Yahoo group: PCR1000
Date: 2002-08-20 11:28:51 UTC
From: darvuk
Topic: 548 Message: 548

Hi all, just been messing around with the icom software, I would like to now if you can change the BANK name from BANK 00 to somthing else, I've changed the channel name but cant seem to change the BANK name or is that not possible. when you look at the screen you have BANK with up & down arrows then next to that there is another box which says BANK 00 with one arrow pointing down this is what i'm trying to change so i can call up a bank by name. thanks......Dave

Go to my Weathersat page and read the info at the bottom of the page.
Try the Wxtoimg program. I have started using this instead of WXSat.
The images today are a bit noisy. The meteor 3.5 from yesterday is o.k.

RE:
General Protection Failure in OLE2DISP.DLL AT 0001:OB20

Anyone got anywhere with above fault that was posted by richard, as I thought Id put xp on any have been running talk pcr with no problems on xp BUT I gave icom's own software a try and got the same fault.

It is the latest version from Icom and it did work on ME.
Any ideas?

Running 1.31 on XP - no problem at all.

However occasionally NTVDM / wowexec gets upset. (The stuff that runs 16 bit apps). After stopping them form the task manager all is well.

If you want a copy of 1.31 let me know.

James

Les, It would have been just porno anyway!
Other groups are also constantly being bombarded by this rubbish,
usually with the same header. These days I just delete any with a
similar header without bothering to open it.

While I am writing in, I am considering buying a PCR1000.
I have a djx-2000 and a Yaesu Vr5000 - is it worth the expense buying
the pcr as well? I like the idea of laptop attachment, what benefits
will I gain over my current systems? Your input is most welcome.

Thanks Steve
I like to PCR1000 for me it is a stop gap really as had to sell my ham gear a while ago due to the usual reasons.
Bear in mind you have to have the computer on to listen, obvious really but sometimes it would be better to just have the radio on!
Also if you have XP then you are better using talk pcr software, I havent got the dongle that you can get now to run radio com but understand that radio com works well with thw PCR and XP.
Depends what you like to listen to, for me its Radio Hams plus aircraft and shipping for this it works well.
Hope this helps.

Funny you should run that past the group, since I have had 4 comms here for years and was tempted by the 1000.
The others I hardly use now since the 1000 is actually on 24/7, (that was primarily for WxSat reception), and I use ReCall to automatically record signal.
You can program banks of frequencies for whatever purpose and change in a split second.
Life is so much easier.

Come on, relax. I know these spammers are a pain in the neck, and I would also just as well have them on an uninhabitable island on the North Pole (or South Pole, wherever the climate is worse), but let's not forget that this is a hobby. I am sure the list-owner has a job, a family life and what have you. I am a (co-)list-owner as well, and luckily enough we haven't suffered from these donkey-holes as yet (we are not on yahoogroups - don't know if that has anything to do, though). I think it would be rather complicated to filter the postings (making a filter should not prove too complicated, but I suppose it is difficult to make one that blocks just the messages that need be blocked). The option would be to moderate the list, but this would either force the list-owner to be at his PC all the time checking messages, or the members to have to wait until the list-owner has an opportunity to check the messages he has received. May-be there are other -and better- ways to block spam, but we cannot all be geniuses, can we? 73 de Frank ----- Original Message ----- From: Dallas To: PCR1000@yahoogroups.com Sent: Sunday, September 01, 2002 3:14 AM Subject: Re: [PCR1000] ENOUGH!! I have released a little Hardware control panel for the PCR1000.
With this panel a PC or PoketPC isn't necessary.
If are you interested to this project see my web site to:

582. Bonito Radiocom 5.0

Yahoo group: PCR1000
Date: 2002-09-05 04:28:26 UTC
From: Marty Grove
Topic: 579 Message: 582

I have occasionally seen some discussion in here about Radiocom 5.0. I have this software, but have never been able to get it to run on my XP machine using a USB to Serial adapter. Has anyone had any success with this? I realize the serial cable plugs into the dongle that plugs into the PCR-1000, so possibly there is a problem with this.

Thanks for any replies.

Marty

Excel lets you use a command called quick fill. Under the edit tool use the fill command. It will fill sequencially whatever you start.

588. Antenna Questions

Yahoo group: PCR1000
Date: 2002-09-12 01:09:14 UTC
From: akula77
Topic: 588 Message: 588

I just got this radio, so far so great. Is it possible to put too much antenna on this thing? I tried a discone, as many recommended, but I just can't get over the tremendous intermod from WLW (between that and the old Bethany VOA, we'll all have cancer here soon). I then hooked it up to a Hustler 5 band vertical and a 40m dipole, with mixed results on HF. Other suggestions?

Part 2 of this question regards indoor antennas. At work, I'm in a metal building. I need a really stealthy antenna to go out the window and onto the building. Long wire? Can I run it on the gutters, or across the metal roof? Suggestions?

Yes, although I am not sure (bought TalkPCR a long time ago - and been using it ever since), in USB/LSB/CW-mode your receiver mutes when using the Spectrum Scope. TalkPCR has found a more elegant solution to this PCR-1000 problem: when using USB/LSB/CW it freezes the Spectrum Scope (BandScope in TalkPCR). But apart from this (not too important flaw) I am still quite pleased with the receiver!

594. Audio Muting - PCR1000 Remote Commander Uses

Yahoo group: PCR1000
Date: 2002-09-16 17:32:14 UTC
From: Eddie Bryant - N4UMJ
Topic: 594 Message: 594

Thanks for the reply on the Spectrum Scope and
LSB-USB audio muting. At least I know that this is
normal. When I first got the radio I thought for sure
I had been taken as I could not get the LSB-USB
audio to work at all. After fooling around with the
panel I figured it out.

I later plan to try out other PCR1000 software
programs after evaluating the Icom Software.

Has anyone else found a practical use for the DTMF
remote commander executable files feature? Seems
like it is designed to use the PCR1000 as a remote
computer/base controller. Sort of a strange feature in
that it offers more than just a display of the DTMF
tones received and alert tone features.

I moderate another yahoo group. You can setup
membership so that anyone can join, but their
initial posts will be moderated (until the
moderator changes their settings). This way,
if you get a spammer joining just to spew spam,
his post will not get through, although the moderator
will see it in "pending post". That member can
then be unsubscribed/blocked by the moderator.

This (fortunately) is not true, James. I subscribe to various mailing lists, and this is the only one that p***es me off by spam. I suppose the list-owner has to limit access to the list to approved e-mail addresses. In the cases we are talking about, the spam would certainly would not have got through, since I can hardly imagine a listowner to approve one of those nonsense (not to say "bull manure") addresses.

These postings are spam. Anytime someone posts "check out this new site" AND the email userid is something ridiculous like adjhfa@..., I never click on it.
I think the only way to stop these postings is to moderate each and every joining member and each post... for awhile anyway.

It is easy to setup. If you were to subscribe
to the yahoo group attawa_amateur you will be
'on probation' for the first post, as moderator
I will see it in 'pending posts' and can easily
determine if your post is valid or spam. If
you're a spammer, I delete the post and delete
you from membership.

Just for the record, I too subscibe to a number of groups, car/radio/tv/satellite, and have been hit by this junk on all of them, up to 4 in a few hours. Quite often the message is recognised and ignored, or of course opened and deleted.
Just a simple mouse-click.

Hi Guys

There's a ton of software to run you radio in linux. Just search google. I have been running my radio for over a year on linux and love it to bits.... ONE WARNING !!!! make sure you backup you eeprom as linux seems to strobe the com port when starting up or shutting down and this has killed my radio before.

QPCR is a fantastic program in development and Pcrd is a command line app thats fantastic if your interested in using your radio remotly

From: darvuk
Topic: 617 Message: 617

Hi everyone. I have the following radios for sale due to the fact that i no longer have the time to use them. i am to busy these days to really enjoy this hobby. maybe one day i will give it another try. Rather than just let this equipment gather dust i'm sure there is someone out there that can put these to good use. What i have are 2 pro 2006 scanners they are both in mint condition with original boxes and manuals and have not been modified in any way. also i have a icom pcr 1000 with dsp fitted and is also in mint condition with original box and software and manual which i run from my Dell laptop that also is up for sale as you need a PC to run it. also a pro 60 hand held scanner which works fine and is in good condition apart from the belt clip which is broken that also has original box and manual. i am looking to sell the lot in one go but i will split them. if someone wants to buy the lot the price will be less. if i sell them on their own the pro 2006 will be £100 each the icom will be £200 and the pro 60 will be £50 the dell laptop is £225 which totals to £675 if anyone wants the lot i will take £600 no offers please as i will pay for postage. the spec of the laptop, Dell latidude CP 233mmx
128mb ram 6.4 HDD CD-Rom Floppy TFT screen 13.1 touch pad mouse usb port serial port printer port P/S2 & IR. any more info e-mail me direct dave@... and i will give home phone number if
you need to talk to me. it's all still up and running at present so if anyone would like to see it all running they are more than welcome to visit me. rgds.....dave

Is somebody going to unsubscribe these users?

This is becoming tiresome.

There would be no point. This robot changes its identity every message.

The list owner can simply set the list to "MODERATED POST" for new users.
S/He gets a preview of the incoming message, and kills it there. ONCE the
new user seems to be legit, his post gets approved and the moderator then
changes him to "UNMODERATED" and every future post from the legit person is
free to be posted.`

Can anyone help, just installed TalkPCR, on my WinXP laptop and it worked for about an hour, then nothing. I just get hiss as though I have no antenna connected (I have tried both my outdoor and indoor antenna)

I have also tried the demos of ScanStar and ScanCat to see if it was the software, but the same problem happens. My EEPROM seems OK after checking it with PCR1000BUR so I am at a loss as to what to try next.

Any Comments would be welcome.

Did you try receiving several different groups of frequencies? A similar thing occurred to me, but only on the HF frequencies. I could get LF/MF and then VHF and up, but was dead in between which I found out later through help on this group to be a dead diode.

Good luck with that one!

No, absolutely no luck. including several attempts at getting some support from the vendor. It's a shame though; I enjoyed using the software on my old laptop (which had a serial port). This new Toshiba has done away with it.

If anyone ever has any success using RadioCom 5.0 (or 4.0 as well) using a USB to Serial cable, please let us know your secret!

Marty

I'm using a new Toshiba also - the model is 1905-S301.
I got my problem resolved. 1st, I use a wireless LAN
at home, and when I installed the Belkin USB to serial
cable, the installation process was picking up the
driver for the Linksys wireless LAN access port. I
had to manually tell the install wizard where to find
the correct driver. Now the Belkin cable works
properly. 2nd, I emailed Bonito and did get a
response - ensure that the Icom software "was idle".
So, I uninstalled the Icom software, reconnected the
serial cable and switch box with the switch box
connected to the 1000. Now everything works properly.

631. PCR1000 and Windows CE

Yahoo group: PCR1000
Date: 2002-10-12 19:55:36 UTC
From: Pedro Perez
Topic: 631 Message: 631

Hello friends!

Has anybody tried to control the receiver from a Windows CE device?

I have done some tests with PCSCAN (DOS control program) loading into PocketDOS with a HP680 HPC, but some commands do not work properly (volume, squelch, etc). I have tried all PCSCAN versions... all do the same.
Any suggestions?

Thank you very much in advance!

Best from Spain,
Pedro.

633. Signal analysis tool, a new PCR-1000 User and lots of ??

Yahoo group: PCR1000
Date: 2002-10-12 23:36:11 UTC
From: razsor2001
Topic: 633 Message: 633

Hello

I just got a new PCR1K and this is the first step for my daughter and I into the world of Ham radio. I'm having fun listening she's chomping at the bit to get her Technicians Lic.

Any way I thought I might contribute an idea or two. First I've been using an interesting application called Baudline to "watch" sound files and have recently used it with the PCR1K. For the Linux users out there you may find it usefull, I'm feeding the audio through it and then on to my XP system. http://www.baudline.com/index.html

"Baudline is a real-time signal analysis tool and an offline time-frequency browser. Designed for environmental analysis missions that range from modulation parameter measurements to searching for transient signals that go bump in the night, baudline combines fast digital signal processing, versatile high speed displays, and continuous capture tools for hunting down and studying elusive signal characteristics. "

Second is there now or should there be a web site dedicated to the PCR-1000, something that can avoid the annoying posts we are getting? Not hard to set up something using php that can be used to post files, articles, proper forums and links. Anyone interested?

Is anyone using RadioCom 4 (came with the receiver) and is 5 worth getting? I'm want to view images from NOAA etc.

Next I'm going to build something to catch those satellites :-) any suggestions?

Best Regards
John

635. Which software?

Yahoo group: PCR1000
Date: 2002-10-13 18:05:00 UTC
From: mike
Topic: 635 Message: 635

Hello everyone,

I am a new member, only having bought my PCR1000 a few days ago.

Am i right in assuming that most people dislike the supplied software that Icom give you with this radio? I have found it less than easy to use (the fact that SSB will not work with the band scope one being a prime example - i thought it was faulty!!), and while i'm getting the hang of it slowly it is not very user friendly.

I have downloaded TalkPCR, and while i find it easier to use for tuning around, i'm not keen on the way the memories/scanning works, and find this aspect actually harder to use then Icoms own. Maybe i'm just being dense, but the manual seems fairly poor on this aspect. (I don't think it's just that i'm rubbish at using software either - i can use the Cubase Sequencer OK, so i'm not a complete dunce!!!)

I've had a good search for some software that will work on the Psion 5/Revo but have drawn a blank - most odd, i'd have thought they would be ideal partners, but what do i know?

I have found the Palm pilot one, and have even gone to the bother of locating a used Palm IIIx to give it a try, but i gather the features are very basic on it.

So, my question is, what does everyone else use? Or do most people use a combination depending on what type of listening they are about to do? This is what i'm doing at the moment, using Icom's own for airband listening/scanning, and the TalkPCR for HF tuning around.

I'm open to hints and tips though.....please help me get the best of of the radio - it seems such a useful bit of kit!!!

Cheers,

Mike.

I love the Icom software and particularly like the virtual radio displays
for presentations and demonstrations .

I also use the CTCSS decoder facility

Or should I say "used "because I can't get it to work on any system beyond
Windows 98 , which I no longer use.

It's an absolute pain!
There seems to be no cure and Icom aren't interested in updating the
programme, yet they want to sell the radios !

I want to use the unit but am seriously thinking I will now have to sell it
and get something else .

Richard .

From: bavarian1929
Topic: 588 Message: 640

Hello, I have ued a RadioShack disc-cone antenna and the reception was really good on FM, AM and Aeronautical Bands, in addition to the international shortwave bands. Its sitting on the ground outside my window and I am sure it would work even better if I ever get around to climb up on the roof to mount it there. One thing you should follow religiously: If there is ANY chance of lightning to approach within a few miles, disconnect the antenna. Also to improve reception, use a good ground. You may want to read what an experienced user says on

http://www.webdeals.net/pcr1000.htm

He swears by the ChannelMaster discone by the way.

>He swears by the ChannelMaster discone by the way.

I use the Scantenna Antenna as well as the Icom AH7000 discone.
The longer length of the Scantenna seems to enhance the Shortwave
and VHF low band frequencies much better than the smaller discones.
This wide range performance makes it a good match for the PCR1000.
My Scantenna works exceptionally well!

It appears the Scantenna is very similar to the Channel Master model
5094A in looks but I am not sure of a side by side performance
comparison.

For the money the Scantenna is a fantastic deal! It's available from
Grove: http://www.grove-ent.com/ANT7.html and Antenna Warehouse
http://users.cis.net/kingpop/Scantenna.htm among others.

644. Re: [PCR1000] Re:ChannelMaster discone

Yahoo group: PCR1000
Date: 2002-10-15 20:34:21 UTC
From: Harry Joel
Topic: 643 Message: 644

Hi Eddie,

I really appreciate your info about this antenna. I was not aware of its existance. The PCR-1000 Forum members also never mentioned this brand as far as I can tell. I will pass this information on to other inquiring about a good antenna for this receiver.

Regards

Harry

From: Pres Waterman
Topic: 643 Message: 646

Not only did Eddie quote an entire digest in his message, but then Harry quoted Eddie's full quote including the digest! So those of us on digests get digests of digests, and with the idiot sending incessant "new pictures uploaded" messages, it's all too much to digest!

Folks, when you reply, first off make sure the subject remains intact (if you get a digest you must be careful of this, as your reply becomes "re:Digest number 246" instead of the original subject, and second: DELETE above and especially below the stuff you are replying to!

Please.

Thanks

Topic: 648 Message: 648

I just purchased a PCR1000 from Grove and got the Bonito software with it. In the package which contained the CD I found a "IC-SWL" THING...what exactly is it??? It looks like an adaptor and has a 9 pin male/female plug configuration. I put it on the radio and all works well...I was just wondering what this thing does and DO I REALLY NEED IT?? It seems to be some sort of switch...I could just remove it but have learned over the years not to *^%$# with things that are working. Curious about this thing..I cant see anyone giving away anything for free that is not necessary...so.....is this thing necessary or not and what does it do?
I also found out the "IMPORTANCE" of backing up my eprom. Trying all the free software available out there has forced me to re-install my eprom settings 3 times in 4 days

Whoa! I'd call this poor design on Icom's part! The only software I've used is Icom's and TalkPCR, but I've had a lot of crashes over the years (this is Windows after all, and early versions of TalkPCR were pretty unstable too) and I don't have any EEPROM corruption as far as I can tell. I think they need to use a much, much longer code to enable writing to the EEPROM.

650. RE: [PCR1000] "Dongle Plug" or what ever it is????

Yahoo group: PCR1000

Topic: 648 Message: 650

It's a "dongle" which must be inserted in the RS232 line between your computer and the PCR-1000 to allow the Bonito software to run.

It's a form of software anti-piracy protection and it works for the PCR100, PCR1000, and Drake R8A/R8B. It cannot be used with the software to transmit.

It doesn't affect other control software, so you can just leave it in-line when you're using TalkPCR, etc.

Roger

I don't want to tempt fate too much but I've used and tried all sorts of software on my PCR1000 and to the best of my knowledge have never had an EPROM hiccup. I do have a back up of the original setting but my unit does not display any of the typical symptoms so assume its OK.

So to read that you have had to restore so often is strange to me - could it have something to do with said dongle (which is security hardware to prevent unauthorised use of the software) perhaps? I just cannot see why you have had to do this so often and what symptom has the unit displayed to make you do this?

Graham

654. PC1000 and Bonito

Yahoo group: PCR1000
Date: 2002-10-18 18:28:19 UTC
From: Carlton Haycock
Topic: 654 Message: 654

I just bought a PCR-1000 and hooked it up. I have installed the PC1000 software, TalkPCR, and the Radiocom from Bonito that
came with the unit. All the programs except Bonito appear to work. I do not get any sound when I use the Bonito. I do have the
dongle installed correctly because if I don't install it, Bonito just hangs when it starts.

Any suggestions?

Thanks,
Carlton

655. RE: [PCR1000] PC1000 production

Yahoo group: PCR1000

From: Graham Black
Topic: 654 Message: 655

I recall some discussion here about the number of PCR1000s which had
been produced and there were a number of estimates.

ICOM have stated on their web site that they have made around 10,000
units since launch. So now we know!

From: Roger S. (Bear) Yurek
Topic: 648 Message: 656

I downloaded every PCR1000 software program available on the net and installed them one by one. Many were Beta or "try" programs. After a couple of installs I noticed lack of sensitivity on UHF. after a few more installs anything above about 35 Mhz hardly worked at all.
Luckily I had used TalkPCR's backup program immediatly after first hooking up the radio and after trying to run the "QRO Software"program found on the net. This program didnt work at all...even in DOS with nothing else running..I actually thought at one point that this software messed up everything,it couldnt communicate with the radio at all and the program went nuts when trying to find the radio. I ran the Talk PCR reset program and all was fine again. I use WIN XP and would guess it has
something to do with this...I started using XP's "Compatibility" switching to both install and to run these various programs and most programs came to life when ran in WIN 95 Compatibility mode...a few still dont work and seem to be junk anyway. Icoms PCR1000 program runs fine..so does TalkPCR. Bonito's Radiocom 4 seems to work fine also...I am happy with runnning these 3 programs which combined do just about anything I could wish to do with my PCR1000.
I dont know or really care what caused the eprom to corrupt..everything is running fine even in XP..The point is make TRIPLE sure you have a backup ready to go if needed...sooner or later you probably will need it...for whatever reason especially if you like "messing" with all these fly by night software packages available out there

From: tacticalmgmt
Topic: 657 Message: 657

As an avid Scan*Star Deluxe user and one who has not yet embraced the "beta" Spectrum Explorer, although it looks very promising - have started this group for those users of SSDeluxe. In my opinion this is a very powerful program and I use it with my Optocom, PCR-1000 and BC245xlt and SE is not yet up to the standards that I have come accustomed to with SSDeluxe. And, since SE has a group and SSDeluxe doesn't I thought I would test the waters so to speak and see what the level of interest is.

SSDeluxe has many features and since the documentation is kinda lean perhaps an exchange of ideas and tips would be of benefit to members.

Anyone interested can subscribe to ssdeluxe-subscribe@yahoogroups.com

Hi I am about to buy a second hand PCR1000 with DSP for £150, is this a fair price?

Also what frequancies can I check, to make sure the eeprom is ok?

I live in the UK in the city of Wolverhampton so would need frequancies that I can pick up from there.

Thanks for any help and advice.

Don't think you can download the manual but you can download the ICOM software from their site and run it - then use the help file. Alternatively use a shareware utility called help2rtf to prepare a manual from the help file. That works well and there is somewhere on the net a copy of that as a text file but don't know where or if it is still out there. But easy to do yourself anyway.

As for evaluating the EPROM situation all I can suggest is check on Pete Mahy's site where there are some links/comments on the subject. I have never (touch wood) had the problem: maybe because I have a copy of the settings! My unit seems to pass all the tests OK.

I would think ?150 a fair price given current situation.

From: Rob Choc
Topic: 664 Message: 664

What does the packet socket do exactly?

When I connect it to the PC sound card its the same as the speaker out only louder.

Sorry, but I'm gona be asking a lot of questions as I have just got an Icom pcr1000 for trial until the end of the month. Then hopefuly will buy it.

I tried to decode wefax, but it was very unclear. The sound seemed clear enough.

I have ordered an interface (data slicer) hope this will improve my decoding.

Regards Rob

PS Thanks for the URLs Graham, I also managed to find a 30 page manual on the web.

Thats an easy one to sort out.

Find your PCR1000.INI
open you ini file and find a line that says:
TOOLBARSHOW=1
change it to:
TOOLBARSHOW=0
Then save

and it should work.

Hi Rob (et al.),

Yes, it sure does look good, even though I had quite some trouble to finr it an appropiate comm. port (both under W98 and WinXP). One important option I am missing, and which is most useful in TalkPCR, is the fact that it is impossible (at least I have not yet discovered how to) to use the keyboard for its various functions. The least I would have liked would have been the option to enter the desired frequency on the keyboard.
Should I have missed a possibility, a little msge would be greatly appreciated.

From: peterxrm
Topic: 680 Message: 680

Hi all
I have a quick look around and all the alternative software for the PCR100 but does not decode sstv-rtty-cw-unless I am looking in the wrong places.
The supplied RadioCom v4 software that came with my PCR100 last week includes those modes. But the software seams 'deaf'on vhf/uhf.
Has any one used v5 of the RadioCom software? Or is there shareware around that includes these modes?

To enter a frequency from the keyboard you can move the mouse over the TextBox marked "Frequency". Its just above the 'Organise' button, double-click it and type in a new frequency...

I wrote PcrPro1k to suit most features of what I needed/wanted in a Scanner program. Icom's program is ok, and TalkPcr is nice but lacks a few things of what I wanted. So I created it to fit my needs mainly.
In time it too will be as good or better than TalkPcr, then I might charge for it, but as for now it will remain free due to not being rock solid yet...

Future plans are to create a "Scanner Construction Kit" - You design the layout, size, colors, different buttons, knobs, meters and skinnable...

Hi Rob
You dont need a special interface just for decoding all the digital modes that you mentioned, if you have a soundcard installed in your computer and an OS like Windows, there are a lot of software that make job decoding that kind of a digital modes. They work just fine (100%) with my PCR-1000 or other radio (I have also VR-5000 from Yaesu among other rigs...)
You can find all software tht you need in the Internet. I have also special interfaces home made, but using the soundcard it is only the PCR-1K, computer and the software.
I use JVComm32 for decoding FAX(HF and NOAA sattellites), RTTY,NAVTEX (it can also receive SSTV), for SSTV I use CROMAPIX, for CW CWGET and for PACKET UISS with AGWengine. Of course there are more, much more.You can find all this links in www.hffax.de
Enjoy your PCR1K with digital modes like I do.

Best regards

Jose Alves

Jay, I must say, what an excelent piece of software.
Would it help if we posted bugg reports and maybe features that would be nice?
or is there another forum for that?

BTW could we have it in the files section? or a link in the links?

Regards Rob

Franke,
I don't appreciate this type of email, especially as it goes to my
work email!

That sort of reply does not help anyone.

Try being a bit more civilised, and then people might not put you in
their kill file.

Datastic,
As for the 0 ohm resistor, you sure it's a resistor, not a link?

Regards Rob

690. TalkPCR keyboard and a shameless plug for Griffin Technology

Yahoo group: PCR1000
Date: 2002-10-28 15:36:22 UTC
From: ·Pres Waterman·
Topic: 690 Message: 690

in TalkPCR, is the fact that it is
impossible (at least I have not yet discovered how to) to use the keyboard
for its various functions. The least I would have liked would have been the
option to enter the desired frequency on the keyboard.
Should I have missed a possibility, a little msge would be greatly
appreciated.

In TalkPCR you click in the frequency display area and type the frequency
directly

Also, a very nice accessory to use with the radio and program is the
http://www.griffintechnology.com/products/powermate/index.html

The Power Mate is a USB knob programmable for volume and/or a keyboard press
like arrows. I use it to change frequency like a tuning knob after focusing
the mouse on the TalkPCR virtual tuning knob.

692. Pcr-Pro1k - problems.....but i quite like it!

Yahoo group: PCR1000
Date: 2002-10-28 20:13:35 UTC
From: mike
Topic: 692 Message: 692

Hi all,

I'm pretty new to this group - i've only had my pcr1000 for a couple of weeks. So far i'm not totally happy with Icoms supplied software, but am getting more used to it. I'm also not totally happy with TalkPCR either. (yeah, i know, i'm fussy!!)

Have checked out the PcrPro1k, and quite like what i've seen so far, but a finding it VERY unstable on my computer (Pentium 3, 1ghz laptop with 384mb of ram and Windows ME) Everytime i use it, it "falls over" with the error message about a problem with "MSVBVM60.DLL" and closes down. This happens when i click just about any of the buttons on the screen. Has anyone else had this problem?

I appreciate that it's only a "beta" version at the moment, and i'm not complaining at all, i just wonder if anyone has found a way around a similar problem. I like the idea of being able to "build" your own interface.....now THAT's a good idea!! I'm sure that every owner would like theirs set up slightly differently, and i would pay to be able to do that, AND have the memories work in what i consider to be a "sensible" way, and use the keypad to tune the radio. (my main complaint about the Icom software is the lack of keyboard shortcuts.....using the mouse all the time is a pain.....)

Cheers for now, and keep up the good work!

Mike.

I wrote PcrPro1k to suit most features of what I needed/wanted in a Scanner program. Icom's program is ok, and TalkPcr is nice but lacks a few things of what I wanted. So I created it to fit my needs mainly.
In time it too will be as good or better than TalkPcr, then I might charge for it, but as for now it will remain free due to not being rock solid yet...

Future plans are to create a "Scanner Construction Kit" - You design the layout, size, colors, different buttons, knobs, meters and skinnable...

If you have a "wheeled" mouse, you can also use the wheel on your mouse to "tune" any digit of the frequency and to "turn" the knobs.

Much more fun than typing...

I would like to echo Mike's feedback.

I like what've I've seen of PcrPro1k, but most of the time I get the same error as Mike.

The system I'm using is an older Celeron 400 MHz with 128 MB RAM, and it happens to be the only computer still running Windows ME (like Mike). Hmmmm...

696. Decoding Data.

Yahoo group: PCR1000
Date: 2002-10-29 09:24:43 UTC
From: Rob Choc
Topic: 696 Message: 696

Greetings,

I have started to explore the decoding side of scanning; I must admit I am having a lot of fun in this area. There is so much software out there!

I have been successful with the following:

Pager decoding (used my interface, that way you don't have to worry about setting the levels right)

ACARS (with interface also works without, but found that I got more hits with)

Slow Scan TV

Weather Fax (not very clear and the lines seem to have a ghost, can this be done with the interface?)

I an now going to try APT satellite reception, but this could be a bit difficult as I am at work most of the day, I come home when it is dark. The only way round this would be to do it on a weekend or find a way to record the signal when I'm not there.

Does anybody have these sorts of frequencies (digital) saved in a talkpcr format? This would help me a great deal. BTW I'm, from the UK.

Have I missed any out????

Regards Rob

697. new UK airband frequencies?

Yahoo group: PCR1000
Date: 2002-10-29 15:46:21 UTC
From: mike
Topic: 697 Message: 697

Hi all,

I gather from the latest issue of Shortwave magazine that the UK is about to go to the 8.33khz channel spacing on the airband at long last. Does anyone know of a list of all the new UK airband frequencies on the web??

After quite a while "off the air" so to speak, i am also in need of a recent'ish listing of frequencies for the HF broadcast bands. If anyone knows where i can find one on the web, again, i'd be pleased to hear from you!

I'm starting to get the hang of the PCR1000 now (basically, i've actually found a couple of spare hours to have a play with it - i know it's hardly rocket science, but it seems a bit odd not having "real" controls to play with!) and i'm starting to quite like it.

Cheers for now, and thanks in advance for any info.

Mike.

698. RE: [PCR1000] EEPROM

Yahoo group: PCR1000
Date: 2002-10-29 20:43:15 UTC
From: Graham Black
Topic: 696 Message: 698

I've had my PCR1K for a number of years now and have not bothered recently to check the EEPROM contents. I eventually found what seemed to be the correct backup file going back to 98 and compared contents. Surprised to see a difference. I then restored the contents and thought I was back to square one!

I could not tell the radio was using different settings: all the remarks in various sites around the web were considered but nothing really convinced me that I had had a corrupted EEPROM.

Question: Is there an absolutely positive method (apart from comparing files) which will indicate that the radio is unwell? I understand that the range of maladies will be considerable but I'd appreciate comments from others with personal experience of this.

Thanks

Graham

Does anyone out there have a PCR1000 schematic showing the locations of the different detector inputs where I could install multiple antenna connectors. Icom must have been on drugs when they designed a radio this wide banded with one input ..it's a joke, I did this type of wiring on my Pro-2006 with 4 inputs to various detector curcuits..an antenna cut near each detector frequency...It works beautifuly...no switches...no diplexers...no "T's" nothing but actual antenna inputs..I used "F" connectors for low loss connections

Thanks for the URL, Rob. I have filled out the form and mailed it. Be it clear that I am not against direct language, whenever there is a need for it and in company that thinks like me. However in a case like this (where in the first place there is no need whatsoever to do so, and in the second place this "person" was kindly asked not to do so) this is unacceptable. I doubt whether Yahoo can do more than ban him (?) for the time being, which is only effective until this "being" subscribes using another e-mail address, but that is still better than just sitting and waiting for this entity to spit out his dark vocabulary.

707. Decoding with a PCR1000?

Yahoo group: PCR1000
Date: 2002-10-30 19:01:34 UTC
From: mike
Topic: 707 Message: 707

Hi all,

This interested me:-

>From: "Rob Choc" <cichockir@...>
>Subject: Decoding Data.
>Greetings,
>I have started to explore the decoding side of scanning; I must admit
>I am having a lot of fun in this area. There is so much software out
>there!

I had wondered about giving this sort of thing a go myself. Do you just take the audio output of the PCR1000 back into the soundcard of the same computer that's driving the radio, and use another program to decode the data, or are you using a separate computer????

I'd be interested in having a go at wefax and RTTY, that sort of thing and maybe even SSTV on the amatuer bands.

Any thoughts or advice much appreciated.

Cheers,

Mike.

Outgoing mail is certified Virus Free.
Checked by AVG anti-virus system (http://www.grisoft.com).
Version: 6.0.401 / Virus Database: 226 - Release Date: 09/10/2002

708. RadioCom5 users?

Date: 2002-10-30 21:29:48 UTC
From: peterxrm
Topic: 708 Message: 708

Is there any with the PCR1000 using RadioCom v5 software or what ever the latest version is.
Why I ask is it is advertised as covering all modes of receiving with it and eliviates having other software for the likes of sstv-rtty-cw-fax and a seperate input to a sound card.
If it does what it says it does it will do for me!

Hi Rob

Yep ! I have also filled out this form. In every group I belong to there are these little people and if you give them the time of day they become big monsters.I 'm sure I am pandering to its needs by sending this email but so what , I'm bigger than him and have had to deal with worse children like him before. I don't know if you remember the era of CB radio... we had little ankle bites like him all the time.

711. Just an idea.

Yahoo group: PCR1000
Date: 2002-10-31 09:09:18 UTC
From: Rob Choc
Topic: 711 Message: 711

Let me know what you think about this idea.

On the Yahoo groups page there is a link to a chat room for this group.
http://groups.yahoo.com/group/PCR1000/chat

I think it would be a great idea if we started to use it, that way we could walk each other through different aspects of our scanning hobby. It's a great way to learn off each other.

Maybe even have tutorial sessions, so we could all join in and have a go.
You can even stream your scanner live, for the rest of the group to listen in.
Great for things like SSTV, you would be able to hear what it is meant to sound like.

In theory you could probably work with the audio that's being transmitted in the chat room and do your decoding with that, great if someone can pick up weather satellite signals well. (it would be interesting to try this as an experiment)

Regards Rob

In the files area, you can find pcr1ksvc.zip, posted by DFW1417, wich
contains the schematics...

If you get what you're proposing, please, let us know.

Greetings from sunny Spain.

Yeah I'm up for it.

Word of caution for what content is streamed. I am missing one AR8000 because of streaming 'sensitive' material.

I am not sure if the quality will be good enough for data ie weather sats, but worth a try. I currently monitor around 8 passes a day...

If RadioCom 5 is anything like RadioCom 4, it probably will not work.
I have yet to get RadioCom 4 to work....no audio....TalkPCR and the
software from Icom both work with no problem whatsoever. The manual
is of no help, it is very poorly translated and sparse on details.

Hi Carlton
I have yet to get the ICOM supplied software loaded let alone work-
ICOM say it will not work on a clean install of Win XP-it seems to
work on updated systems from 98/95 to Win XP as they have underlying
software left behind to aid the installation.So I am left with
RadioCom 4.
The only tip I can add for RadioCom 4 is that the audio output
slider of the 'listen input' and 'listen output'need to be hard
over to the right. I then heard a chappy called Terry Wogan talking
about TOGS, sounded like he was from eireland.

Would be a great idea if I could get my chat to work!

I have tried everything to get it to work.

I have Windows XP Pro, have tried to install latest version of Java VM.

Microsoft no longer support JVM. They say that you need to install SP1, but this did not help.

Could someone else please try with Windows XP, here is the URL: http://groups.yahoo.com/group/PCR1000/chat

723. Radiocom 4

Yahoo group: PCR1000
Date: 2002-11-01 11:05:13 UTC
From: G3UGF
Topic: 723 Message: 723

I bought Radiocom 4 software when I couldn't get my Icom software to work on Windows 2000. (still can't)

The idea seems good but the frequency dial up is so slow and mysterious .

Unless you know what you are doing finding the right number of zeros and decimal points is a black art.
setting the squelch and audio is frustrating and you end up with no sound half the time.

I find the whole thing is trying to do too much and doing nothing well.
The option for pre loaded Marine version seems good but I am not really intersted in acres of things to do with audio shaping and sound card DSP , what I want is a radio,
It has no CTCSS tone decode function

There is no virtual radio display and the un trained eye just sees one big cluttered electronic mess on the screen which is difficult to drive and understand - that's my first impression of it.

Its, no good for demonstrating radio to first timers, which is what I wanted to use it for.

In short, I don't find it user friendly at all.

Richard.

>RadioCom 4.

I have tried it on both Win2k and Winnt4. After I figured out their
*ss-backward way of installing, the program appears to run, but
after that...might as well be a paper weight....

>The only tip I can add for RadioCom 4 is that the audio output
>slider of the 'listen input' and 'listen output'need to be hard
>over to the right. I then heard a chappy called Terry Wogan talking
>about TOGS, sounded like he was from eireland.

I have spent several hours playing around with those sliders, to no
avail....it's ashamed that Icom did not do a better job in picking a
software partner.....

Thanks for the reply, but what version of IE (if that is what you are running) are you using? [look in help/about]

Also do you know what version of JVM you have?

I realy wont this to work, but as it stands, I'm failing miserably :(

Regards Rob

728. RadioCom 4

Yahoo group: PCR1000
Date: 2002-11-02 14:34:24 UTC
From: peterxrm
Topic: 728 Message: 728

Hi All
I have been playing with RadioCom 4 and that the ext spkr out socket was telling me to do exactly that plug it into the puter sound input. There was not enough drive from that input to do anything of importance-so I input to the puter thro the mic input and it came alive!
I now have moderate success with the software all be it some what dated withs its modes of rx.

Hi All

first new to group
name is keith location London england

found group after playing with google looking for software for
pcr1000 after buying one on first day of sale in uk

re Radio com 4/5
i have downloaded V4.0 demo and not having any luck
interesting bit is i found on this site:-

http://www.javiation.co.uk/pcr1000.html

that Radiocom V4.0 comes with the radio when bought from them
so i guess it does work but how????????

P.S. Terry Wogan is an Irish Radio presenter working here in London
for the guy who said he heard him

cheers for now

From: Tom Adams
Topic: 730 Message: 732

Hello Rob.

The answer for me is "yes and no".

In situations where a ground is easily obtainable, I use it.
It helps with minor computer noise problems from the laptop I
usually use to run the rig. On LF / VLF it's a GREAT help in
reducing noise from TV horizontal oscillators, power line crud,
etc.

If I'm using the rig in a portable mode (i.e., away from the shack),
I'll use it with a clip lead if I can find a ground that's easily
accessable. BTW... do NOT try to use the AC power ground pin for
this. It may possibly be a safety hazard, or damage your rig or
computer. On top of it, the AC line ground seems to be very dirty
as far as noise is concerned; it will make your noise problems a lot
worse.

If there isn't a convenient ground connection, I just go without it,
and live with the radio noise.

73's,

Tom, W9LBB

733. Re: GRND

Yahoo group: PCR1000
Date: 2002-11-08 02:10:26 UTC
From: Roger S. (Bear) Yurek
Topic: 730 Message: 733

I have a good ground connection on mine ONLY because I put in a BUNCH of grounding wires (I Knew I would be too lazy to do it later)when I rebuilt my shack. I have quite a bit of interference from my computer monitor and tha ground doesnt help at all even when I put the radio on the other side of the room. I can hear a difference when I touch the ground wire while listening to the radio but cant say if it is helping anything or just slightly changing the pitch of the sound. It does SOMETHING but exactly what I dont know. Since I have a good ground readilly available I use one...if I didnt have one I wouldnt worry about it, though I might get nervous during those cold dry windy winter nights when I can hear static popping off my longwire's blitzbug static dissapator. Then again grounding the radio and NOT the Antenna under these
curcumstaces just gives the static a handy route to ground THROUGH the radio.Bottom line .....Dont worry about it.....I think......lotsa help I am.

Date: 2002-11-18 18:22:26 UTC
From: spacezephyr
Topic: 81 Message: 742

Hi All,

Q's:

1. Is the Icom UT-106 DSP Upgrade Kit of any value to install in the unit? Or a waste of money?

2. Has anyone used with above with the Bonito CS40 software? Some dealers here in the USA are including the software with the purchase of a new PCR1000. DSP is in this package as the ad's say. Does one need both for the best in DSP use? Or is JUST the Icom UT-106 needed?

Thanks in advance to all for any comments.

Greg

From: rich_skaw
Topic: 758 Message: 758

I have had a PCR 1000 for about a month now and have been trying to set it up. The system came with Bonito Radiocom ver 4 but I have given up on that and I now use Talkpcr instead. I have noticed that my hand held air scanner is able to pick up ground transmissions from Manchester Airport (UK) located about 70 miles from me whilst the PCR 1000 is unable to even though they both use the same VHF/UHF discone aerial, have i not set the system up correctly on the PCR?

Also can someone please advise me if a long wire aerial is better than an HF Discone and what length should it be and do i need a Balum or an ATU.

Thanks
Rich

Topic: 758 Message: 761

Hi Rich,
I dont know what is wrong, because I have a good perfomance in 118-137Mhz with my discone.
About the long wire I have two (7 meters long and 10 meters long) and because the radio is too sensitive you dont need a long long-wire.
I use the one with 7m for 40m Band and the other with 10m for 80m and 20m bands with good and clear reception.

Best regards
73

The PCR-1000 has Pass band tuning (using crappy ceramic filters) which allows you to narrow the IF bandwidth, but doesn't have a true narrow band (500 Hz or less Bandwidth) crystal filter. CW purists like myself always want a high rejection narrow band filter in at least the 3rd IF stage, and preferably in both the 2nd and 3rd. Those ceramics have a 6 to 60 dB bandwidth ratio of about 4 to 1, whereas a decent crystal filter has a ratio of less than 2 to 1. Huge difference to CW operators.

The PCR1000 does NOT have Pass Band Tuning, it have IF shift, and this does NOT narrow down the pass band, it only moves the pass band slightly.

Hi Martin and Mark
Both of you are correct, but here in Portugal a good 500Hz CW Filter
costs more than half a price of PCR-1000. I had installed an optional
CW Filter in other receivers that i have but not in PCR1K.

767. Icom Control program on XP

Yahoo group: PCR1000
Date: 2002-12-04 01:41:37 UTC
From: K5QQ@Juno.com
Topic: 767 Message: 767

I suspect this has been asked before but I didn't pay a lot of
attention as I was always running ME and the Icom Program
ran great there.

However...

I just got a new computer with XP and the Icom program
will not run on it. I even tried the compatability mode to
no avail.

Is it a given it will not work or am I doing something wrong?

Thanks

Jim

PS if nothing else, this is a nice break from all the spam ads
that keep telling us to check out some bogus web site.

Hi

OK but??? did you as other guy install into a new computer like the
other guy

or did you have it already running in earlier operating system
and do an upgrade to XP ??

If I remember there is a difference I think the XP upgrade asks if you
wish to retain previous settings during load

cheers for now

For what it's worth.
I run the ICOM SW on both Win 98 SE and Win XP Prof.
I have never had any problems running the program.
I haven't done anything special to make the program
run on XP.
But you are not the only one who have reported
problems running the ICOM program on XP.

I installed XP pro on a system recently and, although not extensively tested, the original Icom control program (ver 1.31)seems to work OK. This is running on an old PIII 450MHz PC. I never used compatability mode, just installed as you normally would. Moght all go pear shaped once other programs are installed but OK for now.

I bought mine receently from www.hamradio.co.uk.
Ordered it on the Saturday late pm, it was with me
direct from Icom on the Wednesday afternoon.

A very good service

Regards

Bill

799. Software Upgrade

Yahoo group: PCR1000
Date: 2002-12-20 14:53:57 UTC
From: avallent <avallent@yahoo.com>
Topic: 799 Message: 799

As an owner of the PCR1000 for some time, around the Windows95 to 98 era, ICOM states on their web site that the software is not compatible with the current Windows operating system, WIn XP. From what they say, Win 2000 is probably also not supported.

I also see that they sell the radio with the Bonito RadioCom software included. I think that ICOM should make that software available to us who are previous owners, so that we can keep our PCR1000's working well under the current Windows environment. Microsoft will soon no longer support Win95 and Win98 will probably become unsupported some time after that as well.

If you go to Bonito and buy RadioCom4 that will cost you $183. The new version, 5, is $259. ICOM offered the 1.3 as a free upgrade to the original software. I think they should do something similar for us now as the computer environment has passed them by and they are offering this Bonito software to new buyers as part of the product.

Tony Vallentine

802. Pcr1k Mini Available for Download

Yahoo group: PCR1000
Date: 2002-12-25 22:50:23 UTC
From: CrazyC
Topic: 802 Message: 802

Hi all, I have just uploaded my latest Project - Pcr1k Mini to my homepage. It's a mini version
that supports all functions from the PCR-1000 - Except EEprom Reading/Writing...

I have also included the Source Code :) that uses my Pcr1kComm.Ocx which brings all known functions that are available, including some that are not. The Mini program shows how to use it...

Install Program & Source can be found at:
http://104452.home.icq.com/pcr1kmini.html

Merry X-Mas :-)

.lzh files are compressed files. Something like .zip or .rar. LZH-files can
be decompressed by WinRar (which I use). I suppose WinZip also handles these
files, but I am not sure (and cannot check it since I don't use it)...

Good luck - and happy new year to all list members!

Yep, I did... Downloaded ok, ran WinRar to decompress - that went ok...
Tried to install on my Win95 box, but gave an error 11% though the process...
So, I then used a program called i6Comp to decompress the InstallSheild6 .cab files.
It runs fine now :)

811. RE: [PCR1000] FURTHER:- New file uploaded to PCR1000

Yahoo group: PCR1000
Date: 2003-01-01 13:59:51 UTC
From: Roger Butler
Topic: 805 Message: 811

I experienced no problems with the download although it took a while to find something to uncompress the .LZH file.
I found a DOS program to do that here -> http://www.winsite.com/bin/Info?500000022457

Turns out this is revision 2.0 of IC-PCR1000 for Windows 98/98SE/ME/2000/XP. I installed it on my XP machine and it looks to be the 'same old - same old'. I did notice that my installed DSP option did not crash the new revision at start up if the tool bar was showing. I have been running the older version under XP and had to either hide the toolbar or remove the DSP option. Hiding or relocating the toolbar has been deleted from the new revision. It simply displays all the time. The memory list displays and scrolls smoother and the com port dropdown now supports com 1 to com 10. The new revision installs in the Program Files\Icom\PCR1000 directory so it should not interfere with your current install of the old version.

Interestingly enough, the install script, MCH files and the Help file are all in Japanese. There is also an additional application (Darc32.exe) included but it too is all in Japanese.

Guess I'll have to brush up on my Japanese,

Roger

Hrm. Must be an issue with Yahoo's servers then.
I'll try it from a fast connection at work later.

Thanks and Happy New Year!

Hi Jim and all

must agree did a little better realdownload made it to 92 per cent downloaded then stopped saying download complete

cheers for now

Hi

Just had a quick read
you are obviously into op systems so

control panel
system
remove both comports you are using
close down as normal
then reboot[not restart]
win 9? will re load drivers for comports

one quick question
is he using one direct cable from pcr1000
to comport we don't have a connected second cable
which has turned around the pin numbers here do we???
i.e. turn mail to female gender benders come in two types

>Hi all:

821. Palm Control Software

Yahoo group: PCR1000
Date: 2003-01-04 08:01:26 UTC
From: b_napper <b_napper@yahoo.com>
Topic: 821 Message: 821

Was just playing with PalmPCR for the first time and noticed it only had 26 channels and no scan capability. That's not so good. Is anyone working on or does anyone know where to get the source for PalmPCR 3C? I don't know any code but i'll learn so that I can get the software perfect. Maybe an ability to plug in MCH or even TalkPCR's files into it. That would be perfect. Just thinking out loud.

Thanks
Ben

Andy, thanks for the link to

http://www.icom.co.jp/downloadfile/pc/pcr1000_jpn1.lzh
However I am having trouble decompressing this file, my lzh decompression programs will not support long file names and a search of the www for suitable programs has not located a suitable program.

My main program for this application is Winzip but even it requires some external files.

Could you please advise what program you used to extract the Icom files or alternatively maybe someone can recompress the files in the common zip format.

Regards

Can only support that remark. WinRar is a very good (de)compresser. Apart
from its own RAR-protocol (which compresses even better than ZIP - at least
text files), it also supports ZIP, LZH and loads of other types.

Frank

Why do you want one ?

Is not the "War Against Terror" enough reason for you to be barred from such technology ? After all Nasty brown people speaking Arabic may also be listening ????

Come to think of it - there are plenty of Nasty White people also listening !!! Many of them spouting the words "freedom" as well as "national interest".

So just why do you want to be able to listen to a mere 30Mhz of the Radio Spectrum..... I mean is not 0-1300 Mhz enough !!!!
Is it because it say so in your bill of rights - or some other antique (i.e. over 25 years old) document says you should some how be allowed access to the full radio spectrum (which incidentally simply did not exist in those days) ? Or are you just trying to have it because Mr Smith next door can not buy it ?

(If I am not offended anyone on terms on race/colour - please include yourself in the Arabic/White category as you see fit)

Shocked - stunned and rather amused by typical US ratings

A Brit - with an UNBLOCKED pcr-1000 - that I have never tuned above 30Mhz (Wanta-buy-it ??)

Tim

833. Winzip Version of IC-PCR1000 English Version 2 software

Yahoo group: PCR1000
Date: 2003-01-04 21:01:16 UTC
From: Paul J. Brooten
Topic: 832 Message: 833

Hello All,

I have unzipped the Winrar file and rezipped it with Winzip for those
without winzip. You can download it from here.

http://www.kb9tyc.com/modules.php?name=Downloads&d_op=viewdownload&cid=1

Hope this helps some people out.

Hi
I don't think we should be restricted from RECEIVING
any electromagnetic that impinges into my
space.
How much are you asking for your PCR1000?
Thanks.
Rene

Why do you want one ?

Is not the "War Against Terror" enough reason for you to be barred from such technology ? After all Nasty brown people speaking Arabic may also be listening ????

Come to think of it - there are plenty of Nasty White people also listening !!! Many of them spouting the words "freedom" as well as "national interest".

So just why do you want to be able to listen to a mere 30Mhz of the Radio Spectrum..... I mean is not 0-1300 Mhz enough !!!!
Is it because it say so in your bill of rights - or some other antique (i.e. over 25 years old) document says you should some how be allowed access to the full radio spectrum (which incidentally simply did not exist in those days) ? Or are you just trying to have it because Mr Smith next door can not buy it ?

(If I am not offended anyone on terms on race/colour - please include yourself in the Arabic/White category as you see fit)

Shocked - stunned and rather amused by typical US ratings

A Brit - with an UNBLOCKED pcr-1000 - that I have never tuned above 30Mhz (Wanta-buy-it ??)

841. REPLY:-SATELLITE LISTENING

Yahoo group: PCR1000
Date: 2003-01-05 15:11:31 UTC
From: KEITH D
Topic: 841 Message: 841

Hi All

sorry someone just asked about satellites in Israel and I hit a wrong
button so having to reply to the list

if you can sir obtain a copy of a U.K. magazine
called :- Short Wave
web site :- www.pwpublishing.ltd.uk/swm

it carries sections on all forms of recieving/scanning

the section you need is INFO IN ORBIT

the guy who edits this section seems to have a site:-

http://www.itchycoo-park.freeserve.co.uk

They are downloading from the weather satellites and all here
freq. is mainly 137.500

special aerial yes but they are quite small and will go in a loft easily
we can get them for about 35 UK pounds here
like a crossed dipole

there will be a page covering mail order in the mag

the mag also has a yahoo forum

send a mail to :-

swm_readers-subscribe@yahoogroups.com

I bet there are a few on there who will give you the full SP

hope this has helped a little

good luck

845. Help with recording from playback channels

Yahoo group: PCR1000
Date: 2003-01-06 11:59:51 UTC
From: robert_tarnell_se <raptor_ghost@hotmail.c
Topic: 845 Message: 845

Hello,

I having problem in finding a record software that alowes me to
record from the playback channel (wav) and not from the record in
(line-in/Mic).

Here is why,

Running ICOM 2.0 PCR 1000 Software, and using the exelent DSP filter
Ver 1.11E from JE3HHT.

The program takes the line-in and transfer the sound to WAV out, but
I cant record the DSP modded sound...

So any ideer´s? anyone?

Hi Bob

I would be interested in more details of what you have connected up.

As I read your first query, I didn't think it would work as I thought the
MM-DSP would be using the sound card processor to do it's processing
and thus you would not be able to also use the sound card to also do
the recording.

When I saw your comment indicating it worked, I went and looked at
the referenced recorder and didn't see anything special other than it
was able to do streaming audio. Maybe one of these two programs
does not use the sound blaster, which might explain how it works.

Anyhow, I think I have exhausted what little I know about how this
stuff works but would be very interested in how you did it.

Thanks

Jim

Hi Jim,

I have been playing with shortwave and so, but the disturbance have been to much for me, so I read about the ICOM DSP UT-106 that you could buy and install, with that you could play with filtering and so.

But on http://www.qsl.net/mmhamsoft/ I found the DSP program that do alot of filtering stuff, half of it I cant understand, but it sound good in my speakers :0)

The thing is that all recorders in windows is using the input´ports´ to record, so I needed to get a program that could get the wav stream from the player ´port´, and that is where the total recorded comes in, it records of the wav ´ports´ and thats after the DSP filter, so the recordings will contain the filtering.

852. PCR1000 with Bonito RC45 software

Yahoo group: PCR1000
Date: 2003-01-07 16:36:56 UTC
From: david_stahley <david_stahley@yahoo.com>
Topic: 852 Message: 852

Greetings
Have two PCR1000 using ICOMV1.31 software. (S/N 032XX & 057XX)
Reccently bought RC45 from ICOM via AES.
Loaded, ran OK.
Had some trouble with erratic com1-loss of link messages.
Do to a few other problems with existing WIN 98SE setup,
decided to reload WIN98SE, and remove/reload V1.31 & RC45.
New install of WIN998SE ran ok, new install of
V1.31 seems stable, ran OK. But.....cannot reinstall RC45.
CD spins up then displays error msg:

The MSVCRT.DLL file is linked to missing export
NTDLL.DLL:RtlGetNtVersionNumbers.

NOTE: Have MSVCRT.DLL & NTDLL.DLL on HDD, even moved copies into
new directory created for RC45.

I hope someone has seen this and will share the solution.
Meanwhile, the V1.31 software and PCR1000 keeps working OK.
Please reply to: DStahley@...

From: Tom Rohrs
Topic: 854 Message: 855

Do you have the registered version of the software? If not you can only use the options under the "Free" tab in real-time. You can check out the other features with .wav file inputs to see if they meet your needs before you decide to register the program. Once you register, all features are available.

Hi Rich,
As you have the line in socket connected and you are getting results from a wav file I wonder if you have missed some of the instructions given by SkySweeper. I found them very confusing.
The point is you have to tell the prog you want a wav file decoded.

I'll go through it step by step but ignore this if you have already done this, and accept my apologies for thinking you are a total beginner who like me took ages and a phone call to get going!!

In the opening screen you will see a loud speaker symbol. Click on that.
You are now in the IO Settings box.
In the "Output" column "radio" is checked. Click on "File(wav)"
A new screen appears. Double click on e.g CW and you are brought back to the IO Settings box.- clock OK.
You are now back on the original screen and the loud speaker symbol has changed to a box labelled "out wav file"

The system is now ready to decode the program you chose from the menu. Once you have got this far you should have no problems.It decodes ACARS very well for me.
Again, apologies if you had "twigged" the above but as said I took ages to figure it out and you may just be in the same boat.
Regards,
Mike.

Hi Mike

Thanks for the info I have carried out your instructions to the letter and yes I was able to decode ACARS after saving it as a WAV file. This copy of Skysweeper has been leant to me by a friend who has gone abroad so I was unable to ask him (he told me it was easy to set up :) The way I understand it is that you need to save to a file before you can analyze the output!!!! Seems obvious now but hey it always does once it as been pointed out to you.

Once again thanks for taking the time to reply

Regards

Rich

From: Bill Smith
Topic: 864 Message: 865

I use a lead from the Ext speaker socket of the radio
to the line in of my soundcard. If you use the mic
input, the audio is distorted. You will also have to
change the position of a switch in the radio, but the
handbook explains all this.

Use the audio recorder function on talk pcr to do
this.

You then get a log of freq, dates times etc, which you
can play back at your leisure.

Hope this helps

Bill

Bill,

Thanks for your reply, I'll have a go at that.

I found the logs for a scan searching a range of frequencies but not
the bank scan with programmed frequencies.
I've been using the help that comes with PCR is there a mannual
avaiable for download, or should I be looking more closely at the
PCR1000 mannual?

Regards,

Bill

Hi

I am using Skysweeper to decode ACARS HF Fax etc but i am having difficulty in being able to analyse the signal. The problem being that I am getting distortion (echo) from my wav output. The Skysweeper Help suggests that to avoid this you should mute the Line In input however, when I do this I lose the sound from the PCR altogether. Any advise would be most welcomed.

Hi Group,

I would appreciate some advice on logging and recording specific frequencies,for example London Mil, Lyneham Approach & Boscome Down.

I have used the search scan functionality but I only want to scan a set number of frequencies.

I am right in saying that the way to do this is using the timer recorder function or is there another way?

Having dabbled with the timer record function last night it seemed to lock onto one frequency rather than scan is there a way to stop this?

I would be grateful for some help with this,

Thanks,

Bill

From: Marty Grove
Topic: 757 Message: 875

Hey group!

This item showed up on another chat group, and I thought it might be a nifty item to share here as well. For you folks who are writing programs for the PCR-1000, this might make a wonderful tuning knob. It certainly looks and sounds like a solid unit.

The link is: http://www.griffintechnology.com/products/powermate/

Take care.

Marty

876. TalkPCR

Yahoo group: PCR1000
Date: 2003-01-15 12:48:25 UTC
From: obspost <ve6agv@hotmail.com>
Topic: 307 Message: 876

Hi Group,
After all the good comments about TalkPCR I decided to give it a try.
Unfortunately with little success. It occurs to me that it is not
compatible with WinMe as the download says for Win95/98/2000. Is that
correct?
The problems are that it locks up - "talkpcr is not responding" and
importing .mch files is nigh on impossible. I did manage to import
all in one block, but cannot do so with individual banks.
So, either WinME is a no go, or I am misreading the help file, or I
should try a fresh download.
Any comments from ME users or help from others appreciated.
Regards,
Mike.

Most assuredly it is a nice unit and works well- IF the program supports having a KEYSTROKE like "up-arrow" equals tune up.

Meaning, you set "turn knob right" to equal "up arrow". BUT "turn knob right" will not equal "right-mouse click". And the original iCOM software uses mouse clicks alone to tune up and down. Therefore Griffin's unit will not do what you want in the original PCR software. But TalkPCR is great with it

Thanks

The Powermate tuning knob really is cool and easy to use and program. It's made DXing much more fun, as it enables TalkPCR to "feel" much more like an actual tabletop radio. I've used it with Win98 and XP, but not on any other radio programs. Don't know if it's compatible with any others.

Hi Mike,

I'm no expert as I have only been using TalkPCR since Saturday.
However I have been running it on Windows ME without any problems.
I haven't had any files to import etc, I did just copy some files
from a Win 98 PC that I was using earlier in the week and that has
worked ok.

Cheers,

Bill

Probably WinME. It should run on WinME. With that OS anything can
happen !!!

Subject: [PCR1000] TalkPCR

Hi Group,
After all the good comments about TalkPCR I decided to give it a try.
Unfortunately with little success. It occurs to me that it is not
compatible with WinMe as the download says for Win95/98/2000. Is that
correct?
The problems are that it locks up - "talkpcr is not responding" and
importing .mch files is nigh on impossible. I did manage to import
all in one block, but cannot do so with individual banks.
So, either WinME is a no go, or I am misreading the help file, or I
should try a fresh download.
Any comments from ME users or help from others appreciated.
Regards,
Mike.

At long last, after 12months of tearing my hair out , thinking that
I had been abandoned with a pile of junk and on the point of
putting my PCR 1000 on e-bay I got a nice note direct from Icom
UK today .

I have downloaded the new version of software from the japanese site
direct and I am one happy bunny again !!!!!!!!!!!!

My laptop runs on windows 2000 (it doesn't like XP) and
everything is working fine.
I use it to demonstrate to high flyers in education, teachers,
educators and students that Amateur Radio is a modern hobby.
Most of them have never seen Amateur Radio before or have only a
historic concept of it.
They have certainly never seen a virtual radio with this kind of
capability.
Can'tell you guys what this mean to me to be back on line again.

Thank you Mr ICOM

Richard G3UGF

Director of Training and Education
Radio Society of Great Britain .

From: tbroystersr <tbroystersr@yahoo.com>
Topic: 896 Message: 896

I am running Windows XP Home Edition on a laptop. I have both versions (1.31 and 2.0) of the Icom software on my laptop. Version 1.31 works flawlessly. The newer Version 2.0 works, but I cannot program any of the Program Scan banks. The first bank is occupied with the 144.0000-146.0000 ham band. The only parameters that I can change are the mode and the filter. I cannot enter or change any other info.

I have tried creating a new file and also using an MCH file created with Version 1.31. No success!

Also, are there any enhancments of the 2.0 over 1.31? On the surface, both appear tobe the same.

From: Drew Wilson <drew.wilson@metuk.net>
Topic: 898 Message: 898

Hi,

recently picked up one of these receivers with no software or RS232 lead. I have downloaded the software from Icom but also have TalkPCR from when I previously owned one of these receivers.

My trouble is that I can't get the receiver to talk to the serial port on any of my PC's and I am wondering what kind of serial lead is used by the Icom.

Is it straight thru pin for pin or is it a null modem cable or what?

The cable I use to control my Kenwood TS-2000 is a straight thru pin for pin cable which is what I have tried with the Icom.

Any info appreciated.

Thanks

899. REPLY:-Serial Cable for Icom PCR-1000

Topic: 898 Message: 899

Hi

not sure if this helps but

I have

1] 9 pin from radio box to 25 pin male

2] 25 pin male into 2 way switch box

3] 25 pin male out of switch box to 9 pin comport

they are both standard cables [box is 25 pin straight through]

so I am going 9 pin---25pin---9pin

if you are thinking this is weird well I only have 1 comport
remainder are usb and I have 2 items which require a comport
switch box solves problem

one point are you selecting the correct port number from the cable icon
on tool bar of pcr1000

cheers for now

Keith D.

Potentially if someone knows the codes they want to send, one could probably use an X10 gadget connected to the PCR1000. All I can say is, back up its EEPROM first!! ;-)

I've been toying with an idea but it's somewhat hardware intensive and software-wise, rather costly as well...

I want to use a Citrix server to publish the PCR1000 software so that it can be run from any web browser. If Citrix can't handle the audio stream well, I'd use Real or Windows Media to broadcast the stream separately.

Big $$$ and not for the faint of heart.

I used an etherpad http://www.sanpeople.co.za and sent info on a port using perl...asp.php..all kinds of software. It worked like a treat and was very stable.

The etherpad acts as a serial to ip converter and listens on a port number.

Hi guys,
I've had my PCR-1000 a couple of weeks now & I find I'm not receiving some frequencies that I did at first. These are mainly in the 118 -136 airband, but also some at around 84 FM. Have I got something programmed wrong or have I a fault ? radio works fine every where else on bands which gives me a feeling I'm after setting something wrong. Also have Radio Com on my PC for fax, rtty etc. Any help appreciated. Incidentally I ran Talk PCR when I got my pcr & backed up the eeprom. It seems to check out ok. Any ideas appreciated.

Topic: 906 Message: 907

Hi guys,
I've had my PCR-1000 a couple of weeks now & I find I'm not receiving some frequencies that I did at first. These are mainly in the 118 -136 airband, but also some at around 84 FM. Have I got something programmed wrong or have I a fault ? radio works fine every where else on bands which gives me a feeling I'm after setting something wrong. Also have Radio Com on my PC for fax, rtty etc. Any help appreciated. Incidentally I ran Talk PCR when I got my pcr & backed up the eeprom. It seems to check out ok. Any ideas appreciated.

From: james wilkinson
Topic: 906 Message: 914

Hi,

The ranges would sugest this is just the usual transit traffic you get in these ranges... eg Aircraft, and Taxis... However, if it's other signals, check the modulation type you're looking for... perhaps you used AM first time round and Wide FM the next, this makes a great difference to what you will recieve. However if I'm teaching you to suck eggs... just ignore me!

I've had mine for a while which means I'm stuck with the old PCR1000 software from Icom, I've hear they come with Bonitos software now, did yours?

Also, to improve things generally, the PCR1000 loves a nice antena. I recently bought a Discone from maplins, ~?42... and it's re-opened up the PCR1000 for me. Before I didn't really pick up much myself, now with this thing, I pick up lots and lots all over the place, it's great.

Anyway, hope something here might help!

James

Hi all
Just joined group and wanted to introduce my self. I have just purchased a new PCR10000 and waiting for delivery. I have been scanning foir about 2 years now and really enjoy the hobby.

I live near Lizard point in Cornwall, but work in London during the week. So I have a great range of things to listen to. Marine / Mil Air / HF in Cornwall anf taxi's in London (I am so amazed at how many there are on the bands).

Before I try and install this (when it arrives), anyone got any tips, hints, Freq files that I should know?

Regards

Daedan

Well,

Make yourself a nice ground point... advice
elsewhere on the web.

Buy a Discone Wideband Antenna. The ant. that comes
with it, works, but doesn't pick a great deal up.

Daedan,

The first thing I would do is back up the EEPROM. There have
been reports (ss well as firsthand experience:( ) of the EEPROM
becoming corrupt, with symptoms including decreased
sensitivity/deafness in certain bands. There are several posts in
this group regarding backing up the EEPROM. ICOM charges a fortune
to reprogram the unit to factory specs, so I can't stress enough how
important I think this is! It's a great radio.....

Enjoy,

Mark

I've read the latest message for backup the memory of
PCR-1000.

If you want a little software to backup it, you can
found it to:

http://www.bonito.net/software/pcr_eeprom.htm

and the software is :

http://www.bonito.net/software/pcr_eeprom.zip

But, please backup the memory contents before ... your
test with radio control software in Internet.

Bye.

Hi Matty

I can't help you with satscape, but if you are trying to record satellite passes, have a look at my webpage and see what I use. It maybe of some use.

What's wrong with Satscape ?

I notice you wrote Satscop - was that a spelling error did you mean Satscape ?

Nobby, Try the following:

124.375
114.250
116.500
284.600
130.650
119.700

They are all for Newcastle airport.

You should also try:

135.275
299.975

Both London Military, and are usually very active. If
you are a mil air fan, let me know off group and I'll
point you to a couple of groups.

Cheers,
Bill

937. TalkPCR

Yahoo group: PCR1000
Date: 2003-02-09 13:10:20 UTC
From: chris_jc@btopenworld.com
Topic: 307 Message: 937

Hi folks,

I'm sure there must be a simple answer but since it is over a year since I had a look at TalkPCR but got sidetracked I have to be a coward and try you guys.

The prog fires up just fine, but when I hit >> for a scan the whole lot seizes up and I have to do a Ctrl Alt Del to get out of it.

I did originally download Talk as sharewhere a long time ago, but since it still allows me to open it I assume I have still got trial time left before I purchase.

thanks in advance, chris jc

I cannot give you an answer to your freezing problem, but as far as trial time is concerned I think the Betas were not time-limited. I seem to remember the definite versions (at this moment V 2.4) don't have a real limit as to trial time, the only limitation is that the nag screen appears more frequently depending on how long you have been using the trial version (as frequently as once per minute).
Unfortunately I don't have a solution to your problem (I am not much of a scanner hobbyist, so I have never experienced it, inspite of using the program for a couple of years now: I bought the definitive version once it was published - real good value for money) but I am sure someone in this list will have an answer to your problem (I have seen it mentioned before) and if not I am sure Pete Mahey (the maker, he is a very kind person, AFAIK) will look into it.

Good luck!

Chris,

Go to the site and download the latest version it is
no 2.92. You'll need version 2.4 installed. I have no
problems with either version

Cheers

945. New Logging Software /w PCR-1000 support

Yahoo group: PCR1000
Date: 2003-02-09 22:28:57 UTC
From: Robert Sillett <sub07@ridien.com>
Topic: 945 Message: 945

Shortwave Log v3.12 is available for download!

This new version lets you remote control your Icom PCR-1000 (or even PCR-100). What's different about my approach is that I integrate remote control with logging. If you click on a frequency in a data grid, the PCR-1000 will automatically tune to that frequency.

The Radio Control Module lets you remotely control the PCR-1000 over the network using standard TCP protocols. This means that you can use your home network or even publish your PCR-1000 to the Internet!

The best part is that you can publish to the Internet in under 5 minutes. All you need to do is download Microsoft's Windows Media 9 Encoder, open a firewall port or two, and you're set.

You can read more about Shortwave Log from the web page:
http://www.sillett.us.eu.org/swlog

Pres,

Right now I have my Lowe HF-250E available for remote control.
You'll either get that or my Icom PCR-1000. To attach to the radio,
use the Radio Control Client from within Shortwave Log and enter the
address of my server: www.sillett.us.eu.org.

There is no web interface at present. You must run Shortwave Log.

Sorry for any confusion.

> Japan web site.

It's also here at the Yahoo!groups website under FILES. Unfortunately it is
in some strange compression format. I will try to remember to re-upload it
here in something more normal.

968. Trunk Tracking PCR-1000

Yahoo group: PCR1000
Date: 2003-02-17 03:30:24 UTC
From: CrazyC
Topic: 968 Message: 968

Hi all...

This is just a heads up to let ya all know that I have a working TrunkTracking program for the PCR-1000. It uses the sound card to decode the control channel and has options to display the Control Channel Info info like Trunker including a dump listing...

It currently supports the Motorola type formats except APCO-25(9600 baud)..
In San Diego, I've tested it on the older TypeII system and Astro (Apco-25 3600 baud)...
With the TypeII system I get a signal of S-3 to S-5 and get a recovery rate from 90% to 100%.
And with the RCS South system I get a signal of S-7+, I get a constant recovery rate at 100%...

I started out this project using the code from MDT Monitor which uses the sound card to decode
mdt traffic. I added the basic code from Trunker to decode the Outbout Signaling Words. In this
way I was getting a recovery rate about 50% to 70% which wasn't good enough...

I then added code from the public released code from 'Capture' by Rick Parrish, specifically the Pll
section from that and the Pll section from 'Trunker'... After some tinkering I was getting a recovery rate
to %80, but still not good enough...

I then turned to my OLD decoding algorithms from my Atari 800 that I used to decode RTTY through the PIO
port... And after some tweaking here and there and trying different sampling rates I finally acheived 100% with a good signal source :-)

So now, I am in the finishing stages of adding the final touches to the GUI and program operation...

If there is something that you would like to see in the application, please let me know and I'll see what I can do...

I should be releasing it to the public in the next couple of weeks for trial and beta testing...

Regards,
Jay

972. IF shift (band pass tuning)

Yahoo group: PCR1000
Date: 2003-03-02 04:14:20 UTC
From: k5woR <rwmcdonald@prodigy.net>
Topic: 972 Message: 972

Maybe someone has the answer for this. The IF shift on my 1000 seems to be not centered in the band pass. That is if you center it via any of the software programs and switch from USB to LSB the band pass is shifted about 500Hz from center. Is this a eprom or an internal adjustment? I use the LSB and USB to copy AM (poor man's Syn)

Robbie

What software are you using? Icom's shipped software or TalkPCR or 3rd party software? It could be a corrupt eeprom at the worse case scenario. Some other members on here might be able to give you a better idea. Let's hope it's not your eeprom!!

Hello PCR1000,
Hi
My first post after purchasing PCR-1000. Could somebody explain to me in simple language (
For somebody who is past his sell by date)
What frequencies and settings are used for receiving HF.

Many Thanks

Barry

Loaded question ??

who/what do you want to here ??

hams use 14.200 USB

plus above this freq

you could also try this:-

http://www.grove-ent.com/mttopHF.html

983. Re: [PCR1000] Re: HF

Yahoo group: PCR1000
Date: 2003-03-11 16:05:25 UTC
From: Arcticpeak
Topic: 981 Message: 983

You may take a look at my "Guide to the radio spectrum
from 100 kHz to 30 MHz"
It can be found on my home page.
Direct link:
http://www.qsl.net/lc2aat/radiospectrum.htm

I will also recommend you to buy the World Radio TV
Handbook (http://www.wrth.co.uk)
and the Klingenfuss Super Frequency List
on CD-ROM (http://www.klingenfuss.org/)

Most broadcasters use AM. (Use the 6 kHz filter
setting for strong signals without distortion and the
3 kHz filter setting for signals with distortion.)

Most utility stations use USB. (Use the 3 kHz filter
setting.)

Radioamateurs use LSB and CW below 10 MHz, and USB and
CW above 10 MHz.(Use the 3 kHz filter setting.)

Good luck,
best regards Martin

From: Bill Smith
Topic: 975 Message: 984

I use a program called Talk PCC. It will log date,
time, frequency, signal strength and has many more
tools. This can be downloaded from the following:
http://www.qrosoft.co.uk

and follow the links for the operating system you
want. This is a shareware program which when you
register stops the reminder screen from flashing up

Cheers

Bill

985. Conrad RDS Manager with PCR1000?

Yahoo group: PCR1000
Date: 2003-03-15 06:45:55 UTC
From: Mike
Topic: 985 Message: 985

Hi All,

Has anyone had any success in linking a Conrad RDS Manager with a PCR1000?

If so, how did you do it? Although the Conrad worked very well with my Icom R7000, I cannot get it to work at all with the PCR.

Regards

Mike

Hey
I need some help , my montitor is DESTROYING my signal ,its so bad that I have to turn off the monitor just do do a propper scan. both my monitor and my scanner are wrapped in tinfoil . does anyone know where i can get a REALLY long rs232 interface so I can move the scanner away? ,If anyone has any experience withthis could you please help.

Cheers

Hi there,

I am very surprised at what you describe. The PCR1000 is so amazing with it's shielding, and even my past it's best monitor is no problem. I am tempted to suggest you have a more fundemental problem, like a missiing earth or an earth loop.
If you take your monitor power from the PC change it and take from the the same socket(s) as the PC for instance, same with the PCR, ie take them all independently from the "same place".
Check you have a bona fide earth on your mains supply.

You might want to get a shielded speecher cable between the prc 1000
and the computer. If i'm correct the author of Talkprc mentions this
on his web site.

Hope this works
Dave

Hey
the power lead aint coming off that monitor , not without a lot of brute force anyway ;) . She's stuck in pretty tight. you say monitors always have earths? , what do they do in Europe or the U.S.? I reckon that its a European monitor but I'm not sure , their voltages are different to the uk and Ireland. Agh ,I tried it with a flat screen and it was perfect , so I'm either going to buy a new monitor or buy a cheap 2nd hand laptop. Still , strange it should cause so much interference though isn't it?

I read your follow up re grounding the monitor.
Could you have the wrong power cable attached to
the monitor? I have seen a few "PC" power cables
that have 3 pin females for the equipment end,
but only have 2 pins at the wall end. You might
try another power cable. I have never seen
a monitor that was not designed to be used
with a grounded power cable. It could be a first.

Another thing that might help is to use very good
shielded coax to feed the PRC1000. "Leaky" coax
cable, like sold by Radio Shack, will allow noise
to enter the coax and can cause big problems.

When I set a friend up a PC to go with his then new
PCR1000, we had lots of noise. An electrician friend
supplied some new duplex power outlets, so we had all
the equipment plugged into good outlets. Some power
strips have lousy sockets. We mad sure that everything

was bonded by a seperate ground line to a common point.
We even tried 2 to 3 wire adaptors to make sure that
ground loops were not adding to the noise. In desperation
I scrounged a different VGA monitor and "poof" all, or
at least most, of the noise was gone.

We were able to reduce the little noise that was left
by following John Doty's "low noise" antenna plans.
http://www.anarc.org/naswa/badx/antennas/low-noise_antenna.html
We went with a MiniCircuits 9:1 transformer because we
are all to darn old to mess with super fine wire.
In my friends home we added a 1:1 transformer at the ground
block, were the coax enters the home. We isolated the outside
coax ground from the inside coax. In his home this made a big
imporvement. I tried it at my home and it made no difference.
This is a general discription:
http://www.lwca.org/library/articles/wa4ghk/gnd_isol.htm
Anther good site for antenna ideas is
http://www.webex.net/~skywaves/ANTENNA/antsys.htm
Most of the time you can reduce the RF noise to where you can
listen to all but the very weakest signals.
Terry

Just a suggestion about the shielding,
I have an AR8600 scanner that was constantly being hit by noise from the computer/monitor as well. I changed the 15 pin VGA cable to a FULLY shielded one made by IBM and this cured 85% of the problem. Seems the cable is emitting allot of noise from the video board. The cable I got was from BIG LOTS (a discount/buyout store) of all places. It was about $15.00 as I remember. Each monitor signal is shielded in it's own small coax and the bundle of individual shielded cables are shielded in another going around the whole cable. The cable also has gold plated pins and is 10' long. Luckily my monitor has a easily replaceable cable. (Plugs on both ends)

Hope this helps,
Rod

If you have ActiveSync installed on your computer then other software cannot find or use that port. ActiveSync is always checking the port which keeps it tied up so other software cannot use it. I just moved my PCR-1000 to com port 2 and now it works great.

>> Check your com port settings.
>> ----- Original Message -----

Hi

long shot but just in case

try this:-

1] start
2] settings - control panel
3] system
4] device manager
5] expand comports
6] check that they have not been re numbered
7] check that the comport number in pcr software
setup is correct after 6]

Highlight the comport number you think is correct

click properties

this should tell you if comport is working correctly

then port settings

should read from top

a] 115,200
b] 8
c] none
d] 1
e] Xon/Xoff

7] check that the comport number in pcr software
setup is correct after 6]

cheers for now

Keith D.

Agree... I used everything from 100 ft wire to Sky Scan Wip in the Uk and the best results for the PCR1000 was a Diskcone in West Sussex and in London.....(even tried our Antenas on the NZHC in Haymarket 20 Floors Up when I worked there)

I use one here in NZ also and have a 2 metre wip also conected through a BNC 2 way switch.

My other Antennas and the 100 ft long wire are used on diffrent receivers

Experiment is the best advice but I think youll find Icom also reccomend a Diskcone at least of 6 elements or more
But try all types out... as well ads Wips.....(A long wire on HF tends to Overload the Pcr1000)

1007. PCR1000 antenna

Yahoo group: PCR1000
Date: 2003-03-29 12:35:39 UTC
From: Pres Waterman
Topic: 1004 Message: 1007

One more "me-too"

The discone is perfect for the PCR1000 and perhaps iCOM could have stressed this in the manual, since they even sell one!

The low frequency section of the radio is hot amd makes up for the discone's reduced effectiveness down there. The discone really starts working at low VHF and up through high-UHF, just where the PCR covers normally.

BTW the discone's freq range is set on the LOW end by the length of the drooping radials, and on the high end by the ultimate narrowness of the junction on the top. It sounds reversed by this description but I have it on good authority that this is so. Furthermore, some discones have a stud on the very top where a whip can be added to improve its low range.

Thanks

Hello,

I noticed you have been working on a trunking program for the PCR-1000. I also noticed that you've released
software in the past using VB. Is this program written in VB? I'm not really interested in trunk tracking but am very interested in decoding
various telemetry data in VB using the soundcard. If it is VB code could you tell me (basically) how you're doing it?
I have figured out how to acquire data and load it into a FFT algorithm, but for the life of me I can't figure out how to get anything intelligible
from it. I'm also interested in how you get around different sample rates of various sound cards.

Sorry to bother you and thanks,

Jim Humphrey

Hi Jim,

The Trunk Tracking program in written in VB and VC++. The C code handles all the decoding and
the interface is written in VB. VB isn't fast enough to do both, you end up loosing blocks of data.

Since these trunking protocols use FSK, you don't need to use any FFT conversions. You can look
for the source code to MDT Monitor as a starting point to learn this.

I'll be playing with FFT soon enough, when I start on a RTTY decoder.
Right now the program assumes that a sound card can sample PCM at 44100.
If someone's sound card doesn't support it, I'll add an option for 22050....

Which telemetry data protocols are you trying to decode???

Regards,
Jay

Jay,

Thanks for your reply. I figured as much. Seems like a C++ DLL would be the way to go wrapped up in a class for VB.
I'll check out the program you mentioned and see how they do the C stuff. The data I'm trying to decode is mostly fairly low bitrate Zodiac binary GPS data and other housekeeping data from instrumentation we use at work. All FSK NRZ-l. You've got me thinking I might be going the wrong direction with the FFT stuff
for this application. Right now I'd just like to use a laptop soundcard to eliminate the need for an external PLL demodulator feeding the Com port.
Well this is starting to get off topic for this list ;) , But I appreciate the info.

Thanks again,
Jim Humphrey

Right now I have the program set to use just the PCR-1000 to decode the control channel
and as the scanner under control. The 'Dual' Mode is disabled in this version.

> Would a PCR-100 be just as usable in this configuration? I have a spare 100

If used as the scanner under control, then no. I don't have a PCR-100 to test with it.
Maybe some nice person out there with a spare, might like to donate it to the cause ;)

Quickest and cheapest method would be to access the machine it's on with VNC (to give you control) http://www.uk.research.att.com/vnc/winvnc.html

To stream the audio install Windows Media Encoder on the base PC and listen to the scanner with the Windows Media Player. (You will need to install TCP/IP for this tho - and there is a 5-10 second delay)

I sell an application for the AR8200 which does all this - (http://www.jaor.co.uk) . If there is enough interest I will look to develop a version for the PCR1000.

James

I've got 5 -6 PC's on a home network using NetBEUI. Can I get my PCR - 1000 to work on this protocol or do I have to change & if so what protocol is best. Has anyone out there done it and how difficult is it. I want to get out of this freezing shack & operate from the comfort of the house. Appreciate any help.
Regards Lipso.

1027. trunkpcr1k problems

Yahoo group: PCR1000
Date: 2003-04-04 15:00:33 UTC
From: djmartins2000
Topic: 1027 Message: 1027

Hi,

I have been trying to use trunkpcr1k but I get
the error "radio not responding, please check com port" etc.
I am using winxp, a belkin or a prolific usb to serial adapter,
and am sure of the com port. I DO NOT have any serial ports
or even ps2 ports on this motherboard, and no free slots
for an addon card for serial ports!
My pcr radio works fine for all other programs except for
trunkpcr1k, pcrpro1k, and pcr1k mini.
I'd really like to use the trunktracking software!!!!
I have been waiting for trunk tracking for a LONG time!
Anyone suggestions?

thanks,
Doug

Hi Doug,
That is due to to the USB port... This issue is under investigation...

Thanks for the report,
Jay

Hi,

I was afaid of that. That sux!
I did just buy a PCI card with serial ports,
I will pill a card and try it.
i have both Belkin and Prolific USB adapters,
and they work great with other software.
All your programs seem to be nicely laid
out, visually appealing, and useful.
I am impressed you have made a trunktracker
for one scanner, there seems to be no others out
there. Good work!

thanks,
Doug

1030. Re: trunkpcr1k problems

Yahoo group: PCR1000
Date: 2003-04-04 23:25:46 UTC
From: djmartins2000
Topic: 1027 Message: 1030

Hi again Jay,

Using a cheapo PCI com card I get it to work fine.
Under system info I show NO com ports if
I only have my USB serial ports hooked up,
yet under system/device manager they show up....
hmmmm.....

thanks,
Doug

1031. New PCR-1000 Owner... serial port pinout ?

Yahoo group: PCR1000
Date: 2003-04-05 05:11:58 UTC
From: Mike Melland
Topic: 1031 Message: 1031

I just bought one of the last few remaining PCR-100's from HRO Friday with the Icom 2.0 software ($259) and am looking forward to receiving it.

Can anyone tell me what the serial port pinout is on the pcr ? Which pins are in fact used ?

Regards,

Mike, W9WIS

1033. Antennacraft ST-2 (Scantenna) Transformer ?

Yahoo group: PCR1000
Date: 2003-04-06 22:59:59 UTC
From: Mike Melland
Topic: 1033 Message: 1033

I know it's not too critical for this type of wideband rx only antenna but has anyone made a different transformer for this antenna to go from the 300 Ohms to 50 Ohms instead of the 75 Ohms as supplied, and to get away from those silly F connectors to standard coaxial cable connector (N, BNC, PL-259/SO-239)? Anyone have any other ideas besides a tuner to better match the antenna to the 50 Ohm input of the PCR ? Splitting hairs as usual....
Regards,

Mike, W9WIS

1036. Re: New PCR-1000 Owner... serial port pinout ?

Yahoo group: PCR1000
Date: 2003-04-07 17:12:59 UTC
From: Jim
Topic: 1031 Message: 1036

I hope it is a PCR-1000 and not a PCR-100 as you mention, as the 100 is little more than an FM/AM Radio, with none of the PCR-1000's more interesting functions...

Just in case!

1048. New PCR-1000 Question....

Yahoo group: PCR1000
Date: 2003-04-10 01:54:08 UTC
From: Mike Melland
Topic: 1048 Message: 1048

I received my new PCR-1000 today and got it hooked up and working. Nice little radio, pretty sensitive ! I'm using a speaker right now because I couldn't figure out how to get decent audio into and out of my computer's built in sound card.... perhaps tomorrow <grin>. I plugged it into every available plug and got audio from the computer on one but low volume and it's not controllable with the volume control on the computer.... hmmmm.

I also am using the latest version of TalkPCR. So far I haven't had any real issues except for a very RF noisy computer monitor that even tosses noise into the PCR when it's connected to an outdoor antenna. I ended up putting the PCR on the floor on the far side of my desk and that pretty well helps. I can't figure out if the tune/center indicator on the software works in nbfm.... I can't see that it works at all. The green dot stays lit no matter how far off freq I tune.... comments ? What am I doing wrong ?

From: Marty Grove
Topic: 1048 Message: 1050

Hi Mike.

To start... have you switched the small slide switch inside the PCR1000 for audio out to the output jack instead of using the PCR1000's built-in speaker?

This switch needs to be toggled in order for the PCR1000 to output it's audio through the audio out jack (and into your computer).

Marty

Yes.... makes no difference into the computer. I get
audio out of the rear speaker jack on the PCR in both
settings.... only it's level changes. It's not an issue
with the PCR.... just trying to figure out the computer...
which of course is missing the manual for the soundcard
<grin>.

And I did figure out the tuning indicator in NBFM....
using a narrower bandwith and it works fine...was trying
to tune with too wide a filter.

If you connect the audio out from the PCR to the "Line In" plug of the soundcart his should cure it.
Don't know if you are aware, but there is also a group dedicated to TalkPCR users

tosses noise into the PCR when it's connected to an outdoor antenna.
I ended up putting the PCR on the floor on the far side of my desk
and that pretty well helps.

Sounds like the noise is coming from the monitor and not the antenna.
What kind of antenna are you useing? I use mine to recieve satalite
packet and GPS. I use the Rat shack discone antenna, these radios
love the discones. If you narrow the filter settings and or ts settings you will see the
tune / center indicator working.

I can't figure out if the tune/center
indicator on the software works in nbfm.... I can't see that it works
at all. The green dot stays lit no matter how far off freq I
tune.... comments ? What am I doing wrong ?

HF long wire for the moment... I also have a Scantenna and that will be at 35 feet. I was going to use a discone, but from what I've read the scantenna is good too and less $$$.

I did figure out the tuning indicator.... and the sound card. I had hoped to use the IBM M55 Bose monitor I use with the PCR ... but from what I can see one must run the audio from the PCR into the line in of the Aptiva's built ion sound card and then hook speaker(s) to the cards audio output. It looks like there is no way to utilize the card AND the Bose amplifier and speakers as it is...

1056. PC control and Analysis software

Yahoo group: PCR1000
Date: 2003-04-11 15:09:16 UTC
From: kurtmclain
Topic: 1056 Message: 1056

I am writing a control package for PC controled radios. This software is running my ICOM 706 MKIIG. It can sweep or scan any frequency range in any mode (am, fm, lsb, usb, cw , etc.) It will log any frequency that breaks squelch (FM) into an array and save to a file. It will plot this data on a graph (live) and display a list of frequencies and number of "hits". It will also do this for signal strength for am/ssb/cw modes. I can select the recorded frequencies to scan.

I am going to add a frequency exclusion feature to skip birdies and carriers or any other unwanted frequencies.

If anyone can think of other features let me know what they are. I was thinking of adding an audio record feature and analyzer to skip tones and carriers or even detect and skip data transmissions. I will work on other Brands and models (Kenwood). Screen shot to follow.

Can you add capabilites like decoding DTMF, CTCSS, or unblocking the
cell frequencies.

1058. FURTHER:-New PCR-1000 Question....

Yahoo group: PCR1000
Date: 2003-04-10 21:00:32 UTC
From: KEITH D
Topic: 1048 Message: 1058

Hi All

I had this

turns out that the newer sound cards do not have amplification

I was using a sound card with an old pair of stereo speakers
8 ohm and got same hassle when I hooked in a new sound card

I had to buy a pair of ?PC? speakers with there own amplification

just plugging old standard speakers into sound out socket of sound card
gave little or no result

cheers for now

Keith D.

Mark, I think the difference between this one and HRO is this one includes the DSP unit. So $300 isn't probably a bad price! Sorry, I have one though w/DSP.

Hi
not sure what you mean by data set

do you mean the 2 disks for the software

if so I have them from just about the first pcr 1000
bought and running here in UK some years ago now

I once sent all the files to a U.S. marines officer in Japan
who had bought one there and all the software was in Japanese

so if this is what you want

yes I have and I can send the files to you

please reply direct

cheers for now

You should try Martin Lynch and Son in Ealing, West London. Look up www.mlands.co.uk for details. Its a ham radio store but they sell scanners etc.

Be aware that in both the UK and Germany its an offence to use your radio to listen to anything other than Ham Radio, Broadcast Radio (with a licence) CB Radio. That said a blind eye gets turned to certain things like airband/taxi's/mosques. DO NOT get caught listeniing to any public service stuff.

No, not blackmail....

This program can replace some of the Trunk Tracking Scanners that cost in excess of $300.... If someone uses this program on a regular basis and saves them from buying a new scanner, then a donation of $40.00 seems quite cheap in comparison don't ya think???

The more users that send in donations = more $$$ I can spend on items such as:
1). USB RS-232 adapters to ensure compatibility with different makes...
2). Add a bigger hard drive so, I can partition and set-up for multi-boot platforms such as WIN2000,
Win98SE2, WinME so I can test the software before releasing it to the public...
3). And any other harware differences that might pop up...

The more users that Support me in my efforts in turn will be Supported by me...
Thanks,
Jay
Hmmm... Kinda like BLACKMAIL heh????

:=(

Hi

1]

www.scannerantennas.com

not a million miles from LHR [Heathrow] !!

out to the west of London you will need a
car for this one I am sure but it appears to be
the best place to get your needs if you can make it

2]

www.hamradio.co.uk

not in advert in mag but they will have them

Ealing is west London again a short drive from LHR

If you are not using a a car this can be got to
by the underground system

1] is a dead cert to have them as per advert

others I would phone first to check stock
if the involve a detour

any more help just knock

cheers for now

1084. PCR-1000 for Sale

Yahoo group: PCR1000
Date: 2003-04-13 19:17:14 UTC
From: Monty
Topic: 1084 Message: 1084

I have a brand new Icom PCR-1000 fresh out of the box for sale.
Hooked it up and decided that I like the old fashion knob turning
radios. Hasn't been out of the box 24 hours. Has the new Radiocom 4.5
with it and it is the blocked America make of radio. This is a bargin
since I'm taking a little loss on this. Asking $325.00. Email me it
you are interested and we can work out a transaction.

ke4nxw@...

1085. Messages thate appear to be from me are NOT Sent by ME

Yahoo group: PCR1000
Date: 2003-04-13 19:24:38 UTC
From: Jay
Topic: 1085 Message: 1085

The message that states:

>my software is great to work with the pcr1000!
>Send me money at paypal, and you can download it!
>This isnt spam.
>
>My paypal account is crazy__c@... go to www.paypal.com and
>give me money.

WAS NOT SENT BY ME!!!

Due to this HOAXER, message will NOT be sent to this
mailing list...

Jay

1086. HOAXER Update:

Yahoo group: PCR1000
Date: 2003-04-13 19:37:00 UTC
From: Jay
Topic: 1086 Message: 1086

If you look at the headers of these so called messages from me you
will see:
X-Mailer: LingoMAIL - Multilingual Email program - V1.0 (22) [Win98
4.10 2222 A] +
From: crazy__c@... <crazy__c@...>
X-Originating-IP: [65.197.214.131] crazy__c@...

1). I don't run WIn98
2). My IP is not "65.197.214.131"
3). My PayPal account isn't linked to crazyc__@...

Look over the real post by me and you will see the difference...

Bye,
Jay

From: anaram
Topic: 1089 Message: 1089

One things for sure

the software i use [not outlook] has a reject button

it auto sends the origional sender a reject message

and none of the 6 i have sent so far has bounced back to me !!!! so someone has got them

i also have a message trace button we will see next time

chers for now

Keith D.

1092. Re: Trunk Tracking PCR-1000 v0.5.40 Beta Now Available...

Yahoo group: PCR1000
Date: 2003-04-15 00:26:50 UTC
From: Mark Phillips
Topic: 1011 Message: 1092

I am having no luck at all in decoding any of the trunking mi my
area. I have an NJ State Police transmitter about a mile down the
road from me which I can hear very well but cannot decode it.

I have found that when decoding data with my PC setup I have to
select 32k or 22k samples before I can decode the data properly.

I am using a sound Blaster Platinum Live in a Athlon 1.4GHz machine
under Win2K

Any help would be great.

Thanks

: radios.

I understand your position. However, I found a very interesting thing in the PowerMate, a USB knob that will tune your radio within the software. It made a BIG difference in enjoyment of the radio for me. You may want to try this ~$40 toy before giving up on an excellent radio.

1094. New PCR-1000 Question....

Yahoo group: PCR1000
Date: 2003-04-15 15:44:48 UTC
From: Pres Waterman
Topic: 1048 Message: 1094

I also am using the latest version of TalkPCR. So far I haven't had
any real issues except for a very RF noisy computer monitor that even
tosses noise into the PCR when it's connected to an outdoor antenna.
I ended up putting the PCR on the floor on the far side of my desk
and that pretty well helps. I can't figure out if the tune/center
indicator on the software works in nbfm.... I can't see that it works
at all. The green dot stays lit no matter how far off freq I
tune.... comments ? What am I doing wrong ?

There is a specific TalkPCR group for questions about the software:

1097. RE: [PCR1000] New PCR-1000 Question....

Yahoo group: PCR1000
Date: 2003-04-15 23:26:15 UTC
From: sadtip
Topic: 1048 Message: 1097

I have an AR8600 MKII scanner/receiver that was constantly being hit by noise from the computer/monitor as well. After some experimenting, I changed the 15 pin VGA cable to a FULLY shielded one made by IBM and this cured 85-90% of the problem. Seems the cable is emitting allot of noise from the video board. The cable I got was from BIG LOTS (a discount/buyout store) of all places. It was about $15.00 as I remember. Each monitor signal is shielded in it's own small coax and the bundle of individual shielded cables are shielded in another going around the whole cable. The cable also has gold plated pins and is 10' long. Luckily my monitor has a easily replaceable cable. (Plugs on both ends)

Hope this helps,
Rod

Topic: 1048 Message: 1098

Thanks for the tip on the cable. Unfortunately this is one of those hoky IBM/Bose monitors with the "built in" cable. I have access to other monitors so I think I'll just swap and see if I can get a quiet one. All the noise is caused by the monitor... it doesn't affect my ham equipment much but that antenna is much further away from the house. Turn off the monitor all the noise goes away. The balun for my long wire is just above the window and the monitor is just inside....

I have rf chokes on the PCR's power cable, serial cable etc but they don't help at all. I notice my hand held receiver is also affected by the monitor..... on the other side of the house about 50 ft away <grin>.

1100. TrunkPCR1K issues with Win2K

Yahoo group: PCR1000
Date: 2003-04-17 14:03:14 UTC
From: Mark Phillips
Topic: 1100 Message: 1100

Hi folks,

I'm trying to listen to the NJ State Police and after much messing about I finally was able to decode the data when I invoked the reverse polarity option. Whilst I now get some group information displayed in the "screen" I'n not able to hear anything but the data. Am I right in thinking that the radio will hop about so that I can listen to the currently used channel or is data all I can expect to get?

I'm running it on a Win2K machine and am having some other problems too. If I stop the decode by pressing the Trunk button again it won't resume properly when I press the trunk button again. Also, I cannot create a bank of channels from within the software. I find I have to edit a TalkPCR file and then import it.

Also, is the website down? I'm unable to connect to it.

Thanks

1101. Software for decoding rtty etc...

Yahoo group: PCR1000
Date: 2003-04-17 17:24:07 UTC
From: Mike Melland
Topic: 1101 Message: 1101

What are you all using to decode rtty and other modes ? What
software has the best bang for the buck.

I have aquired a Universal Radio M-1000 decoder card for a PC which I
had hoped would work but I understand it probably won't function with
a computer above a 486 processor, and mine is a P2 266 MHz...
Looks like the card will be up for sale soon...

Mike, W9WIS

1102. Re: [PCR1000] TrunkPCR1K issues with Win2K

Yahoo group: PCR1000
Date: 2003-04-17 20:31:54 UTC
From: CrazyC
Topic: 1100 Message: 1102

Hi Mark,
Yes, when all is working properly the program will hop to the propper frerquency to listen to the voice channel.

After the 'Trunk' Button is pressed(1st time) the indicator to the right should turn Green indicating the
sampling routines started ok. When pressed again, it should turn Red indicating that samplimg has finished.
If after a couple of seconds, if it doesn't turn Red then it's still sampling the sound.
I encountered this problem on my XP machine. Haven't resolved it yet! - But looking into it...

To add Banks or Channels, you should be in 'Conventional Mode' (Not Trunking). Press 'Manual'
if searching/scanning to stop. Then under the 'Edit Menu' you should be able to add new banks or add/insert
additional channels to an existing bank...

The web site is either busy at times, or the ICQ network is under a heavy load. It happens to me to from
time to time...

Thanks for the info,
Jay

From: M. King
Topic: 1105 Message: 1105

OK, I'm new to this group. But I have had a PCR1000 for about 2 years. Been using it as is for awhile. I mostly use a JRC-525 or my RS Pro-2002 for listening. But I decided to take my PCR1000 to work and hook it up there. Never really had the need to listen to "those blocked" frequncies. But I saw on the net were there was mods to do so.
So I guess just because you could, I wanted to. Well I did the resistor change and the grounding of "the" pin. It did not work.
I then got TalkPCR and uploaded another eeprom file. Still no change.
Unit works fine, just did not get the desired effect. So whats up?
Maybe because it is sn 05451? Thanks.

Subject: [PCR1000] PCR1000 mods did not work...help???

OK, I'm new to this group. But I have had a PCR1000 for about 2
years. Been using it as is for awhile. I mostly use a JRC-525 or my RS
Pro-2002 for listening. But I decided to take my PCR1000 to work and
hook it up there. Never really had the need to listen to "those
blocked" frequncies. But I saw on the net were there was mods to do
so.
So I guess just because you could, I wanted to. Well I did the
resistor change and the grounding of "the" pin. It did not work.
I then got TalkPCR and uploaded another eeprom file. Still no change.
Unit works fine, just did not get the desired effect. So whats up?
Maybe because it is sn 05451? Thanks.

Hi

Just out of interest

my software has a reject button as well as a delete button

if I hit the reject the e-mail is auto deleted plus!!!

the sender [originator as against yahoo group]#
gets a mail back saying it has been rejected

I have done this on several occasions

have you received any of these reject messages ??

as I have not had one returned as undelivered so far
so someone somewhere must have got them

cheers for now

Keith D.

Hi Keith,
No, I haven't received any of those reject messages.
Looking through the header that the hacker sent, it has my email address in place of my name or
nickname. If your email program goes by what email address it 'sees' in the header, then it would
probably send it to me instead of the hacker.

In the hacker's header it shows: X-Originating-IP: [65.197.214.131] crazy__c@...
as the Originator and you'll see my IP shows a different one.

Thanks,
Jay

From: Mark Cheavens
Topic: 1067 Message: 1114

Here is my bit of detective work.... The IP address of 65.197.214.131 is a UUNet address range. There are no computers or routers on that address right now that respond to a ping request. Here are the services and other computers in the same subnet as that IP with the services that are running on them:
065.197.214.001
065.197.214.004
065.197.214.005 SMTP HTTP
065.197.214.010
065.197.214.021 FTP SMTP HTTP
065.197.214.022 FTP SMTP
065.197.214.023 FTP SMTP
065.197.214.024 HTTP
065.197.214.127
065.197.214.129
065.197.214.145 gw.watg.com
065.197.214.161 host161.hunsakersd.com
065.197.214.223
065.197.214.224
065.197.214.225 uunet-gw.savantinc.com
065.197.214.228 DNS HTTP

The web servers on 5, 21, and 24 are all for Southern California Fire/rescue authorities/departments.
http://www.watg.com/ is an engineering/architecture company that has offices in Newport Beach and L.A. (as well as others)
http://www.hunsakersd.com/ is a Southern California surveying company.
http://www.savantinc.com/outerContact.html is data warehousing company that has offices in So. Cal. as well as other locations.

There are currently about 600+ users subscribed to the list. Of which about 150 have bad addresses or are currently bouncing for one reason or another.

The user is obviously in the So. California area and I would bet that they are a subscriber that has been around since sometime just before the first post was made.

Unless the user was smart enough to spoof the originating IP address as well (return address is for total amateurs). If it is really bothering someone then they should contact the abuse department at UUNet.

This is the start of the work. This work will either aggravate the offender OR make them go away.

Mark

From: Michael Melland
Topic: 1117 Message: 1118

I don't have a schematic but one of the parts in any receiver to suffer from gross overload are the signal diodes. I suspect much of the pcr may be surface mount so it ain't gonna be easy. Check the diodes in the front end and replace those blown.

Mike, W9WIS

From: jimandleah2000
Topic: 1120 Message: 1120

Hi All,
I blew out the front end of my PCR1000, but I can see the 2 parts that I fried. Can anyone tell me the part number or value of these parts. There are 2 of them, identical at the VERY FRONT of the PC board (or front of the radio). They are surface mount. The first one is the first part to the very left of where the RF connector attaches to the PC board. The other part is at the other end and or the trace to the first part and is identical. Any help would be appreciated.
Thanks, Jim

I found a schematic.... it looks possible that they are 1SV307 diodes.... the pcr makes use of lots of them. Or those surface mount components MAY be the two caps first in line .... C1 a .1 parralelled by C4 a .001.... without actually looking at the board I can't visualize just what ones you have that are fried. But at least you can see them <grin> ... I still suspect they are the diodes.

1130. Icom Revision 2 Software

Yahoo group: PCR1000
Date: 2003-04-22 18:48:03 UTC
From: unidenman2002
Topic: 1130 Message: 1130

Has anyone figured out how to copy & paste alpha tags on the Icom memory list in this software. I got it to copy one tag and then I could paste it one at a time, but I couldn't have 12 lines of data in there and the alpha tags blank and copy a different tag and paste it to all the lines where there was not tag.

No biggie, it just took a little longer but not bad since I only have to do it once then save it in a file. Just wondering....

:-!

I believe it will but you will also need a null modem adapter to use
with it.

:-)

Have a look at the following site.

http://www.qrosoft.co.uk/tpv20/tp2_92.exe

I have been using Talk PCR with XP although I have a
problem with the USB to serial converter.

There is also a user group. To subscribe send a mail
to TalkPCR-subscribe@yahoogroups.com

Hope this helps

Topic: 1144 Message: 1145

Greetings,

Just to add to Steve's post a bit...I was a member of the beta testing team for Probe1K and have been a long time user of Probe software. This is an absolutely outstanding software package and works with the PCR1000 to scan and search from 25 MHz to 1300 MHz.

For a mini-review of Probe1K, please check my website:

http://www.scancapecod.net/data/probe1k/probe1k.html

As previously posted, full details of the software can be found at:

http://www.probe1k.com

I am not affiliated with Datafile Inc., and have derived no compensation for my review or this message. I'm just a long time satisfied user of Probe that was thrilled to see it reworked to utilize the PCR1000. There have surely been some great software packages created for the 1000. However, anyone familiar with Probe should find the release of Probe1K very exciting. If you're not familiar with Probe and are serious about high performance scanning with the 1000, you owe it to yourself to take a look at the info on Probe1K in the above links.

Unfortunately, not directly. However, provided that Probe1K is run on a Windows system it can be used in conjunction with the software available at this site:

http://www.davee.com/scanrec/index.html

I have not tried this software as of late, I tried it years ago when it first came out. It appears to have a timestamping capability.

> Also does it work with Windows
> XP

Yes it does. It may be necessary to implement a third-party software to allow it to access the com port directly. This is available at http://www.direct-io.com. I run it on a Dell Latitude laptop using WinXP Home and it works superbly.

The beauty of this being a DOS based program is that it will run on a computer with very little horsepower. An old 386 or 486 can be dedicated to its operation. I'd love to see it have its own recording and timestamping capability but as it's a DOS program that makes it difficult. As far as I'm concerned this is the only limitation of the software.

From: Scott Halligan
Topic: 1144 Message: 1150

> Must've been a real quick look. They say that it works with XP
but no
> mention of audio recording capabilities.

Just to clarify, Probe1K does have a very sophisticated logging feature, but has no direct way to record audio to the hard drive and time stamp it with frequency and time received info. It will work adequately with the third party scanner recorder software as outlined in the previous message. In order for this to happen however a line from the 1000's external speaker jack to the line input of the soundcard will be necessary.

Probe1K will run fine with Windows XP, but MAY require the use of Direct I/O software to provide optimum speed. I am using XP as I type this, running Probe1K with Direct I/O and achieving about 50 channel per second scan speeds.

Again, detailed information can be found at the following links:

http://www.probe1k.com - The Probe1K Website
http://www.scancapecod.net/data/probe1k/probe1k.html - My mini-review
http://www.strongsignals.net/access/reviews/reviews.cgi?type=display&rtype=rev&class=soft&num=006 - The Strong Signals review of Probe software, on which Probe1K is based and nearly identical to.

From: Dominic
Topic: 1152 Message: 1152

Just wanted to let everyone know that I've had success with the Belkin USB/serial adapter I bought at CompUSA. I have a new Toshiba Satellite (sans serial port) running WinXP and I use TalkPCR. The adapter F5U409 cost 39.99, although their website shows a newer, cheaper model which they call a USB PDA adapter (24.95). I had to change to Com 4 and it worked great. Now I have to find out if my Griffin Powermate will give me any troubles... I couldn't use it and my mouse at the same time on my old Compaq laptop, but I'm running a much more powerful machine now, so we'll see.

I wonder if it's something other than XP. I've run it on two XP computers, one a Dell Latitude Laptop 1 GHz Pentium III with 512 MB RAM, and the other a homebuilt AMD Thunderbird 1 GHz with 512 MB RAM. Both are XP Home Edition with Service Pack 1. It's been flawless for me on both. Compatibility settings were not needed. I just received my 1000 so I have Radiocom 4.5. Do I have a newer release or is this the version that has been shipped all along?

1156. DRM Capable PCR1000

Yahoo group: PCR1000
Date: 2003-05-04 17:28:31 UTC
From: Mark Phillips
Topic: 1156 Message: 1156

Hi Folks,

I'm putting an order together for a bunch of the Sat-Schnieder 12KHz convertor boards that will enable the decoding of Digital Radio Mondial (DRM) with the right software (available from www.drmrx.org). This board is about an inch square and installs into the PCR1K and taps off the 455KHz IF converting it down to 12KHz which is then presented onto a spare pin on the line socket.

The cost of the board is $25 US plus $2 shipping to any Con-US address. Payment will be upfront by paypal and delivery should be about 2 weeks from time of order placement.

For an extra $30 I'll install the board and tune/test it too if you send me your radio with return shipping.

Drop me a line if you're interested.

This is a problem with radiocom 4.0 or 5.0. Some of
the functions will lock up when it is used with
windows xp. I have talked to the company that
developed the software and did not get any help.
Radiocom works good with 98se, but when it comes to xp
there is a problem. There is no answer to the problem
because the manufacture will not support their
software. A person can live with the problems or use
other kinds of software to control the prc1000
software. I found it hard to use with the prc1000.
Good luck with you problem.

1158. Networking PCR1000 Thanks

Yahoo group: PCR1000
Date: 2003-05-04 22:37:20 UTC
From: thelips.geo
Topic: 1158 Message: 1158

Many thanks to James Hazell for his help with networking the PCR1000.
VNC is a great little program & Windows Media Encoder is working fine
on the audio end of things.
If I get really going on this I might try a live broadcast of my
friends band playing in the local venue. Thanks again James.

James et al, I actually got around to cobbling together a Citrix solution with nFuse and Secure Gateway to "webify" the PCR1000 application. Really slick being able to use a web browser to fiddle with the app!

Then I tried Windows Media Encoder but the latency between analog and encoded output (at least seven seconds and often drifts longer) is absolutely ridiculous. Fiddling with the buffering options and audio quality was pointless.

Everyone tells me that latency is always going to be a problem but I have trouble understanding why, when most videoconferencing protocols have delays of just fractions of a second.

I liked the idea of WME because of it being a lowest common denominator approach, but are there better options with less latency?

Thanks,
Brad

you can also try WinAmp's SHOUTcast to broadcast the audio... also check javaradio.com ... tons of PCR1000's online live.

1161. Anyone hearing the BBC on DRM from Sackville now?

Yahoo group: PCR1000
Date: 2003-05-09 23:09:01 UTC
From: Mark Phillips
Topic: 1161 Message: 1161

So it's 2305 and I can just about see that the BBC are transmitting but cannot get better than 4 or 5 db. This happened yesterday and a few days ago and then suddenly they went from S2 to S9+60db for the rest of the show. Methinks that the interns over at CBC have started on the Molson early and are beaming the wrong way.

Can somone on the West Coast confirm this?

Mark Phillips G7LTT/KC2ENI

1164. Talk PCR latest ver giveing problems

Yahoo group: PCR1000
Date: 2003-05-11 13:13:38 UTC
From: wizprang
Topic: 1164 Message: 1164

Hi, I have talkpcr2.4 with the beta 2.9 over the top. I have to have the beta as I use a belkin usb/serial adapter which will not work with the 2.4 ver due to usb problems. I am getting problems with program lockups and computer resets whilst running talkpcr. What is the best speed for the cable transfere 9600 or 115000. Is the person who wrote the program still updateing it. Im quite willing to pay to register if I can get it working right.

Roy.

1165. Re: [PCR1000] Talk PCR latest ver giveing problems

Yahoo group: PCR1000
Date: 2003-05-11 15:13:13 UTC
From: Michael Melland
Topic: 1164 Message: 1165

I've been running the same set-up on a Win95B P2 266 MHZ with 128 MB RAM for several months via the serial port (not USB). It's in use for several hours nearly every day and I have never had a lock-up. I've never even looked at the port communications settings...

Sounds like perhaps a software clash over the port control ? Do you have other USB devices as well ?

Mike

1166. ICOM PCR-1000 vs. TenTec RX-320

PCR1000

Replace D1, D2, D3, D6 and IC-4. Though you need to send it to
service anyway! EPROM need to be re-tuned the after installling new
components. And i doubt you have Eprom tuning software.

1168. few questions...

Yahoo group: PCR1000
Date: 2003-05-15 00:39:38 UTC
From: billy_the_cat2000
Topic: 1168 Message: 1168

I have a few questions maybe someone could help me with.

I have been a Mac user since 1995 with VERY limited knowledge of Windows and just became a ham in 2002.

I saw an ad for the PCR1000in QST mag, and while being a scanner and shortwave hobbyist for many years... I decided to send for one and also order a refurb. laptop...ThinkPad T21 running Windows 98. The PCR-1000 arrived today from HRO but I am still waiting for the computer.

Questions...

1.Will I have any problems installing the Icom disks running Windows 98, or will I have to get the update from the Icom website and install that also? I have a cable modem for my Mac and do not know if I will be able to get on the net with the Windows laptop using my current set-up.

2.The CD software included in my box was the Rad Com 4.5.Is this as good, better or about the same as the TalkPCR software?

3. Should I back up my EEPROM if I do not use the TalkPCR and what software would I use if I wanted to back it up?

Any guidance in these matters would be greatly appreciated.

Bob

I ran the Icom program and TalkPCR on Win98 without any problems
(but on a Gateway and now a Dell).

> 2.The CD software included in my box was the Rad Com 4.5.Is this
as good,
> better or about the same as the TalkPCR software?

It isn't necessarily that one is better than the other. In my
opinion,FWIW, they serve 2 seperate purposes. The Bonito software
(RadioCom) is built around digital decoding (FAX, RTTY and such).
TalkPCR is strictly for controlling the radio. While you can
perform most of the control fuctions using RadioCom, TalkPCR is
better suited for general listening and memory bank management. I
think that the general consensus of this group is that you can take
the Icom software that comes with it and toss it in the trash.

> 3. Should I back up my EEPROM if I do not use the TalkPCR and what
> software would I use if I wanted to back it up?

Absolutely, yes! If there was one thing I could pass on to
another PCR owner, it would be to back up you EEPROM (whether or not
you use TalkPCR). The EEPROM on my PCR was somehow corrupted about
a year ago and I had to drop a lot of money (in the neighborhood of
$200) to ship it to Icom and have them realign it. TalkPCR has the
backup feature built in. I bought a 2nd PCR a while back and this
was the first thing I did.
Check out: http://geophysics.ou.edu/ahern/home/pcr1000/
This should give you some options for EEPROM backup if you choose
not to use TalkPCR.

Good luck and enjoy!

Mark

I got Bonito with my PCR1000, and I not very impressed with it, it very hard to manage a lot of frequencies. You should check out TalkPCR it is great bit of software, I use it for my HF listening.

On another note, I just got my copy of Probe1k (http://www.probe1k.com/) (~$70). It is an DOS program, but it is by far the best software I have seen for any scanner. Check out the web site, it has some pretty impressive features not found in any other software (ie SmartScan, TacScan). Only one problem, it doesn't do HF, but I hear that might be added in future releases.

Good choice!! If it was me, to get a good start, I would read all the archives here first, and then start contrasting the different software that's out there. Also, try to keep in mind the type of listening you plan on doing, in order to match the right software with your particular needs. Don't know if you have thought about an antenna yet, but seems like popular opinion is that a discone with a low band (30-50 MHz) whip works well across the spectrum (HF/VHF and up). Make sure you use the best coax and connectors you can afford.

Good luck and have fun with the new radio!!

Order the 12KHz IF convertor board and listen to some DRM broadcasts.

IMHO, backing up the EEPROM is essential. Check out the last
paragraph on message 1170 for more info.

Enjoy!

Mark,

Where is this board available? I just checked Icom's site and don't see it listed there, and in a relatively quick search elsewhere found no reference. Thanks.

Shawn: Strongly consider the purchase of Probe1K software. Visit http://www.probe1k.com for details. I'm not affiliated, just a long time satisfied customer of Probe software.

DOH! I didn't look too hard. There was the info right in front of my nose...sorry folks. :(

Speaking of boards, I am considering the DSP board for my PCR1K. Despite Icom's "high recommendation" of having them install it, I would guess it's relatively simple to do. Any thoughts? Thanks in advance.

DRM = Digital Radio Mondiale. Go to: http://www.drm.org/

I've read somewhere about someone who had modified a PCR-1000 for DRM, but I have not seen an add-on board for the reception of DRM.

Scott,
The DSP board is very easy to install. The instructions that accompany the board are very straightforward. Just make sure you are grounded (or should I say make sure you have eliminated any static electricity that your body may have) before installing the board.

Well, I didn't have any problems installing the DSP board in my beast. The only thing that's a bit tricky is threading the ribbon cable into it's connector.

Methinks the one who told Icom to reccomend dealer installation on that DSP is the same guy who came up with that sorry excuse for stock software that they sent with the radio! <<grin>>

I encountered the same problem with my newest pc. I've tried the GoldX GMXU-1200 serial to usb adapter. The pc didn't crash, but the comm port connection continuoisly dropped out. This is with XP pro. The pcr-1000 is currently hooked up to an older pc that does have a serial port. No problems.

1193. Re: [PCR1000] PCR 1000 connection aka USB Port Drops

Yahoo group: PCR1000
Date: 2003-05-26 18:09:46 UTC
From: Michael Melland
Topic: 1193 Message: 1193

Many times if you are experiencing USB port drops in XP it is due to the default port power control. Unclick the box that states "Allow Windows to manage power for this device" or the like and you may never disconnect or drop the port again.... it worked for me.

Control pannel/device manager/USB Hub (all of them)/ find the checkbox listed above in the USB Hub properties and try unchecking it.

From: Mark Phillips
Topic: 1193 Message: 1194

I have tried a number of USB<>Serial adapters and have found that they all have the same problems. Either they drop off the USB bus after a short time of use or the software doesn't recognise that the device (eg a PCR1000) is there.

I have found that the cure for all of my devices is to use a hub with external power. Since doing this all 5 of my adapters can be used with everything I have.

For the record I'm running Win2K with a no name USB hub/PSU and the following USB adapters;

3 off USB-1200 nameless brand 9 pin serial
1 off SIIG JU-CS0012 25 pin with single port hub/loop through
1 off Entegra U1-S25 25 pin

Hope this helps

I run one of the USB-1200 with TalkPCR and my PCR1K and another with my RX320 and Clifton Turner software. Both work flawlessly when the USB hub is powered.

1196. HF Comparisons

Yahoo group: PCR1000
Date: 2003-05-28 19:09:42 UTC
From: bill40612
Topic: 1196 Message: 1196

Hi All,

I would be interested to know on your views with regard to the HF performance of the PCR1000 with DSP compared to dedicated HF sets at the budget end of the market eg Realistic DX 394 Target HF-3

I have been using the PCR1000 with DSP, long wire balun and seem to get reasonable reception on 11175 and various other airways freqs.

I'm considering another HF box and would get another PCR1000 but I'm not in a postion to compare so your feedback would be appreciated,

Thanks,

Bill

1198. Sound card problem

Yahoo group: PCR1000
Date: 2003-05-31 01:17:36 UTC
From: jwwarrenva
Topic: 1198 Message: 1198

Hi,

I am new to the group and also new to the PCR1000. My problem is that I can get the PCR1000 to work through its internal speaker but cannot get any sound when connected to my PC's sound card.

My hardware configuration: New Icom PCR1000, emachine etower 533i (533 MHz). The emachine does not have a separate sound card; audio processing is integrated into the motherboard. The Windows control panel says I have a Crystal CS4281 audio processor-I guess that's a chip on the motherboard. So when I write "sound card" I really mean the chip or whatever.

My software configuration: Windows 98 SE, Icom IC-PCR1000 rev. 2.0, Bonito RadioCom 4.5 special edition.

I have two questions: First, does the sound card offer a major improvement over the PCR1000's internal speaker? And if so (my second question), do you have any advice on how I can get the sound card to work?

Here's what I have tried so far. As I said, the PCR1000 works fine through its internal speaker, using either the Icom or Bonito software. But the Bonito setup said to connect via the sound card, so I set the PCR1000's output level switch to the "Phones" position and connected it to the sound card Line In with a cable with a 1/8 inch mono plug on the PCR1000 end and a 1/8 inch stereo plug on the sound card end. There is no sound using either the Icom or Bonito software, although I have set the PC's Volume Controls, both for recording and playback, to their maximum positions. If I disconnect the cable from the sound card and connect it to headphones, I can hear sound. I thought the Line In on the sound card might be faulty, but it works OK when connected to the headphone output of a little pocket radio. I have also tested the sound card with a microphone and that works OK. So it seems there is some incompatibility between the PCR1000 and the sound card, although each seems to work separately.

I would sincerely appreciate any advice.

From: Eivind
Topic: 1198 Message: 1199

Try to connect the speakers from the pc direct to your pcr1k if there is sound now.. Whit the cord that the speaker connect to the pc with. Replace the sound cord whit a new one (I accidentally run over mine whit the swivel chair.

If stil no sound there is a small dipswitch underneath the casing of the pcr1k if this is in-between its positions maybe you can expiries this fault.

1200. PCR1000 .MCH files / Frequency Accuracy

Yahoo group: PCR1000
Date: 2003-05-31 10:49:00 UTC
From: John Faulkner
Topic: 1200 Message: 1200

Hello!

This is my first mail to the group. I am trying to get all the UHF TV channels (audio and video) programmed into one memory file, plus I would like to set up files for many other bands. I heard there was a website where you could download pre-set .MCH files for just about any band/frequency range you could imagine, though I have not been able to find it yet. Having to manually type in all those frequencies would be a bit time-consuming to say the least.

A point regarding the PCR1000 is the accuracy of its displayed frequency. I have a keen interest in TV DX and note down the TV offsets of the old VHF band 1 TV system. The PCR1000 seems to be an excellent performer around 50 MHz. I was able to receive Canadian and US TV during last years sporadic E season and am looking forward to this years. I also managed to get TV from the middle east and far east via F2. My grumble is the receiver's lack of precision when displaying the correct frequency - the *displayed* frequency* is different to the *actual* frequency, which of course is to be expected to some degree. But I have found my own PCR1000 to be up to 40 Hz off at 50 MHz. so have to rely on a knwon tx with absolute accuracy (such as the German Grunten transmitter on E2 - 48.250.422 MHz, or the Buxton ham repeaters on 50.000.000 and 70.000.000 MHz).

I understand the PCR1000 can be as much as 100 Hz + off frequency in this manner. Does anybody have any experiences of this? What are the reasonable limits one should expect?

I am a member of the British FM & TV Circle and we now have several members who use the PCR1000 for TV and FM DX as well as the ham bands. The rx's popularity seems to be increasing dramatically. I have certainly not found any hand-held scanner to come close to the performace of the PCR1000. Even below 30 MHz it performs reasonably well for the type of rx it is.

Good DX and happy scanning!

I don't really think the problem is the cord, because I am able to use the cord to connect to earphones successfully. However, I will try a new cord anyway.

Thanks for the advice.

I may have missed part of the thread.... but have you tried PCR-1000
software other than Radiocom?

It's sometimes takes some trial and error to get it set up properly for the
soundcard audio.

Try TalkPCR or PCR1k and see if it works properly. If so, go back to
Radiocom and play with the audio driver settings.

1204. TalkPCR .WCF File Strangeness???

Yahoo group: PCR1000
Date: 2003-06-01 21:54:24 UTC
From: Michael Melland
Topic: 1204 Message: 1204

I've been using TalkPCR on the PCR for several months under Windows 98SE and never had a glitch.

I upgraded computers after my old P2 died and my new box running XP also works very well.

I have noticed though spmething odd with the .WCF files. If I record them all the features for record and playback work great... but if I tag all and then delete all (or one at a time) when I exit the WCF control screen I get a TalkPCR error message that: "Warning WCF File is out of sync. Recommend that you start a new WCF file." Sure enough.... the next recordings don't start with number one... but with whatever number comes after the last deleted .wcf file. Deleting thne .wcf file entirely via windows explorer fixes this for the next use...

Anyone know why this is happening ? I never noticed it in Win 98SE ? Maybe I just didn't look....

Mike

1205. Re: Sound card problem and other phenomena...

From: johnpq2001uk
Topic: 1198 Message: 1205

Hi, I have seen this problem too. The solution turned out to be very simple - I found that the Bonito software was muting the audio channel. I'm not sure when this happens - maybe on exiting the program.. So, try opening the 'Volume Control' panel - or whatever mixer panel your sound card uses - then make sure that the line or Mic. input channel (whichever input you use)is unmuted.

Incidentally, I found that the Bonito software can corrupt the EEPROM in the '1000. It did it a number of times to my receiver. Fortunately I have backups available so all was restored. I do not trust that bonito software at all. TalkPCR does everything I need - with external decoders when needed.

I've noticed 2 other odd problems with the '1000 -

1. The sensitivity seems to drop by 2-3 dB as it warms up. Not a serious problem but annoying.

2. The frequency accuracy has deteriorated over the las few years (my set is about 4 years old). I put this down to crystal ageing. I've reset it using the PCBUR software, but the calibration of my frequency counter is suspect. I'm building an 'off-air' frequency standard (locked to TV timebase which is very accurate and stable).

Has anyone else noted these odd changes ??

All the best,

John
G3PNJ/DJ0MBK

I too have found that the Bonito software can corrupt the EEPROM
in the 1000. Had it happen a number of times to my receiver. Thought
the rx was going bad ... started using TalkPcr and problem went
alway ..fortunately!
I had a backups so I restored the EEPROM.

The frequency accuracy of the 1000 really SUCKS!!! I have to use
PCBUR about once a week to keep it pretty close. I use the USB and
LSB as a poor man Syn detector. All is pretty good up to about 10Mhz
but really starts getting off above that. Would be nice if it had an
external Osc. input.

From: Eduardo Carvalho
Topic: 1209 Message: 1210

Try a Discone (goes from 25.000 Mhz up to 1.300.000 Mhz in most cases) they aren't very good for low HF such as 80, 40, 20 meters but at a decent hight you will do good. I use to hold a node on javaradio.com and they don't accept PCR-1000 with less then a discone.

You can buy one at radio shack.

HI
Can you hear any thing that you connect to you In-Line jack? Such as a Walkman, CD player... anything you plug in...? If no, then you are to check your mixer "Recording" settings. Open up the mixed and go to File / Properties... select "Recording" and "OK" it... then make sure you have the main recording control selected or... the Line-in selected... if you had "Mic" selected then you would only hear the microfone and so on.... if this is not the case then you have weird situation.

jwwarrenva <jwwarrenva@...> wrote:
Hi,

I am new to the group and also new to the PCR1000. My problem is that I can get the PCR1000 to work through its internal speaker but cannot get any sound when connected to my PC's sound card.

My hardware configuration: New Icom PCR1000, emachine etower 533i (533 MHz). The emachine does not have a separate sound card; audio processing is integrated into the motherboard. The Windows control panel says I have a Crystal CS4281 audio processor-I guess that's a chip on the motherboard. So when I write "sound card" I really mean the chip or whatever.

My software configuration: Windows 98 SE, Icom IC-PCR1000 rev. 2.0, Bonito RadioCom 4.5 special edition.

I have two questions: First, does the sound card offer a major improvement over the PCR1000's internal speaker? And if so (my second question), do you have any advice on how I can get the sound card to work?

Here's what I have tried so far. As I said, the PCR1000 works fine through its internal speaker, using either the Icom or Bonito software. But the Bonito setup said to connect via the sound card, so I set the PCR1000's output level switch to the "Phones" position and connected it to the sound card Line In with a cable with a 1/8 inch mono plug on the PCR1000 end and a 1/8 inch stereo plug on the sound card end. There is no sound using either the Icom or Bonito software, although I have set the PC's Volume Controls, both for recording and playback, to their maximum positions. If I disconnect the cable from the sound card and connect it to headphones, I can hear sound. I thought the Line In on the sound card might be faulty, but it works OK when connected to the headphone output of a little pocket radio. I have also tested the sound card with a microphone and that works OK. So it seems there is some incompatibility between the PCR1000 and the sound card, although each seems to work separately.

I would sincerely appreciate any advice.

I just ordered the AOR SA7000 from Universal Radio. I don't know if it truly is the best option, but according to Universal:

"--The AOR SA7000 super wide range receiving antenna covers from 30 kHz to 2 GHz. This 6 foot (1.8 m) passive antenna has two vertical elements with a built-in duplexer. The aerial is designed for areas where space is a problem or when an unobtrusive installation is essential. The SA7000 is a passive arrangement providing two whip elements: a long element for short wave up to 30 MHz and a second shorter loaded whip aerial for frequencies up to 2 GHz, the loading coils are tuned around 150 and 800 MHz to enhance performance of the VHF and UHF bands. A single coaxial lead feeds both whips in a weather proof enclosure which in turn bolts to a suitable supporting mast (not provided).

The SA7000 is easy to assemble and use, an instruction sheet is supplied with the aerial, "V" bolts and clamps are included but a small stub mast will be required for installation which should be as high as possible and in clear space. This antenna includes 50 feet of RG-58 coax lead-in with a PL-259 to plug into the antenna base and a 50 ohm BNC plug to go into the radio.

The SA7000 is a strong choice for the AOR AR8200, AR8600, ICOM PCR100, PCR1000, Yaesu VR-5000 or other wideband receiver with a single antenna input."

I'll post my results when I get it up & running.

Ed is absolutely correct about the discone. The pcr-1000 works very well with these antennas, mine works well on hf and is only 25-30 feet in the air. The dsp module makes hf listening more pleasant. I like the radio shack discone at only $60, but have often wondered if the better made, more expensive discones would work any better & or last longer?

Subject: Re: [PCR1000] Best antenna

Try a Discone (goes from 25.000 Mhz up to 1.300.000 Mhz in most cases) they aren't very good for low HF such as 80, 40, 20 meters but at a decent hight you will do good. I use to hold a node on javaradio.com and they don't accept PCR-1000 with less then a discone.

You can buy one at radio shack.

HI
Can you hear any thing that you connect to you In-Line jack? Such as a Walkman, CD player... anything you plug in...? If no, then you are to check your mixer "Recording" settings. Open up the mixed and go to File / Properties... select "Recording" and "OK" it... then make sure you have the main recording control selected or... the Line-in selected... if you had "Mic" selected then you would only hear the microfone and so on.... if this is not the case then you have weird situation.

jwwarrenva <jwwarrenva@...> wrote:
Hi,

I am new to the group and also new to the PCR1000. My problem is that I can get the PCR1000 to work through its internal speaker but cannot get any sound when connected to my PC's sound card.

My hardware configuration: New Icom PCR1000, emachine etower 533i (533 MHz). The emachine does not have a separate sound card; audio processing is integrated into the motherboard. The Windows control panel says I have a Crystal CS4281 audio processor-I guess that's a chip on the motherboard. So when I write "sound card" I really mean the chip or whatever.

My software configuration: Windows 98 SE, Icom IC-PCR1000 rev. 2.0, Bonito RadioCom 4.5 special edition.

I have two questions: First, does the sound card offer a major improvement over the PCR1000's internal speaker? And if so (my second question), do you have any advice on how I can get the sound card to work?

Here's what I have tried so far. As I said, the PCR1000 works fine through its internal speaker, using either the Icom or Bonito software. But the Bonito setup said to connect via the sound card, so I set the PCR1000's output level switch to the "Phones" position and connected it to the sound card Line In with a cable with a 1/8 inch mono plug on the PCR1000 end and a 1/8 inch stereo plug on the sound card end. There is no sound using either the Icom or Bonito software,

although I have set the PC's Volume Controls, both for recording and playback, to their maximum positions. If I disconnect the cable from the sound card and connect it to headphones, I can hear sound. I thought the Line In on the sound card might be faulty, but it works OK when connected to the headphone output of a little pocket radio. I have also tested the sound card with a microphone and that works OK. So it seems there is some incompatibility between the PCR1000 and the sound card, although each seems to work separately.

I would sincerely appreciate any advice.

I have a antenna that is mfg by Antennacraft as their Model ST-2 and sold by various firms at differing price levels... $25 to $70 as the "Scantenna".
http://antennacraft-tdp.com/st2.pdf

I have yet to use it... I'm told that they are good performers with the PCR but have no experience myself as of yet. Lightly constructed ala TV antenna but looks rugged enough considering it's relatively small footprint.Currently I'm using a 40 ft wire up about 15 feet...

Anyone have any specific experience with the ST-2 ?

I too have found that the Bonito software can corrupt the EEPROM
in the 1000. Had it happen a number of times to my receiver. Thought
the rx was going bad ... started using TalkPcr and problem went
alway ..fortunately!
I had a backups so I restored the EEPROM.

The frequency accuracy of the 1000 really SUCKS!!! I have to use
PCBUR about once a week to keep it pretty close. I use the USB and
LSB as a poor man Syn detector. All is pretty good up to about 10Mhz
but really starts getting off above that. Would be nice if it had an
external Osc. input.

Aha, that was the problem!

I found that the RadioCom software mutes the audio volume controls for both the Master Volume and Line In Volume when the software starts up. Then it puts the volume controls back in their original positions when the program exits, which is why I didn't notice this was going on. Sneaky, eh?

I guess the next question is whether there is a fix for this problem, other than switching to other software. Of course, I guess I can just "manually" readjust the controls each time I start up.

Thanks very much for your help.

I have heard that iCOM's previous position was that corrupted eeprom was not warranty and only "their" software was allowed to be used. Third party software was not to be trusted and will always blow your reciever.

Now, they are supplying Bonito with newer radios, even though their archaic Win3x -era software has been slightly updated to work on XP.

So if the "official" Bonito software blows eeproms... what does iCOM say to that?

Thanks

Hi Todd,

As I reported in another post, my problem seemed to be due to the RadioCom software's resetting the PC's Volume Controls. It also turned out to be necessary to connect to the Microphone jack on the sound card rather than the Line In, because even after I fixed the Volume controls the sound was very soft.

I am curious about your reference to page 67 of the owner's manual, however. The manual that came with my PCR1000 ("Icom Instruction Manual; Communications Receiver for Computer IC-PCR1000") is only 12 pages long. Is there another manual?

John

I think the Bonito software is very well designed but I will never run it on my PCR. it has bugs and I am waiting for bonito to come out with a new version. I didn't have the sound problems you are having. I dont know if thats because of different sound cards/software configs. For my use, the original icom programs works well. My suggestion is... drop the bonito stuff and wait for a new version. Mean time.. there are more programs that work well on PCR1000

1229. HELP - Backup File anyone ?

Yahoo group: PCR1000
Date: 2003-06-07 08:10:35 UTC
From: Tim Seed
Topic: 1198 Message: 1229

My PCR has lost its settings - can anyone supply me with a copy of their saved EEPROM Data ?
I did not take a copy (hangs head in shame).

Please reply to me off list so not to cause too must wasted bandwidth

Thanks and best regards

Tim

Howdy John,

You should have recieved two icom instruction manuals. One is 84 pages long & the other is 12 pages.
I don't know for sure but if its not on the website, you could always ask for one from icom or the dealer you bought it from.

regards, Todd
jwwarrenva <jwwarren@...> wrote:
Hi Todd,

As I reported in another post, my problem seemed to be due to the RadioCom software's resetting the PC's Volume Controls. It also turned out to be necessary to connect to the Microphone jack on the sound card rather than the Line In, because even after I fixed the Volume controls the sound was very soft.

I am curious about your reference to page 67 of the owner's manual, however. The manual that came with my PCR1000 ("Icom Instruction Manual; Communications Receiver for Computer IC-PCR1000") is only 12 pages long. Is there another manual?

John

I also only got one manual - short, pretty hopeless.

Is this second manual the print out of the help file with the Icom software? Saw that being shuffled about at one stage. Possible to do that yourself by using the shareware utility help to rtf which produces a rich text file from any help file and if you prefer the printed word it solves the problem. Plastic ring binding is cheap and easy and you end up with a useful booklet with margins in which you can scribble cryptic notes!

Rgds, Graham

Hi,
I just finished a session of remote control using my laptop as the master and my Dell desktop as the slave running my PCR-1000 remotely. I use Netmeeting to establish contact with my wireless network cards and utilize the remote sharing feature. I stream the audio into the mic input on my soundcard of my Dell and listen on my laptop. My Dell runs XP and my laptop runs 98 first edition. I need to work more on my audio streaming as I want to use the line input, but heck it works and that is what counts. It's simple, its gotta be if I can do it.

Hi
I use Radmin (www.famatech.com/) as remote desktop software and shoutcast (www.shoutcast.com)as an audio server. This way i can listen and control my PCR1000 ,over the internet, in my office at work. There is a few seconds delay on the audio when changing frequency but the quality is not bad.
By the way my PCR1000 is connected to a laptop that is connected via a wireless access point to my internet broadband router and i have no problem with bandwidth with audio or radmin (although the laptop can only just manage - its an old PII300 lol)

Andy

The higher the freq the more critical the coax becomes, you want the best low loss coax you can afford. Just something to keep in mind and of course it all depends on YOUR listening preferences and budget.

1252. PRC1000 with Bonito And Wndiows 2000

Yahoo group: PCR1000
Date: 2003-06-09 18:11:53 UTC
From: Norm
Topic: 1252 Message: 1252

I have a new unit, which was purchased last week. It seams to have a bit of an issue when the "RadioCom4.0" is closed. Windows is leaving some of the executables running which will not allow me to re-launch this program without a reboot. UGH!

Also has anyone successfully used the PCR1000 with the satellite software wxtoimg? If you did, how did you handle the two software application interacting on the microphone in? (They both seam to want control)

Thanks:
Norm

P.S. The reboots allow plenty of time to drink a beer, but the little lady is complaining, So she would appreciate any advice on the solution to the RadioCom issue.

1253. pcr 100 vs pcr 1000

I have a PCR 100 that I have stopped using as I moved onto then to Windows 2k and linux.

Is it advisable to try out the EEPROM backup on my PCR 100 and the software, or is it that the PCR 100 is totally different compared to PCR 1000.

Awaiting your advice.

Mitesh

Best bet is not to use the Bonito software. It has bugs. Some people had their EEPROM corrupted using that program. Try the original Icom software. You can download the latest version from Icom's web site.

Or, wait for Bonito to come up with a newer version.

I have not used WXtoImg yet.

Todd is correct.
Make sure you also have the correct connector to hook up on the radio and to ground the unit otherwise you will suffer with RFI.

Hi there,

I realise this is a group for the great little PCR (which i also have along with my R10) but i thought you guys might be able to help me.

Just email me direct if you dont want to post it public.

I have a Icom IC-F410 and I would like to repair my cable so I can program some new frequencies to the radio, can you please point me into mthe direction of where i can find a diagram for the programming cable and also a current link to the software as I have formatted the computer and lost the software. This would be greatly appreciated as I need to add some channels ti the radio and have used Icom for many years in my company.

Email would be the best option.

Regards

Jason

All The Best
Dancing_Priest

// ... That's exactly what I did with a holiday group who sent me HUNDREDS of e mails each week. Could I get off their list? Repeated requests to them to remove me did nothing (predictably) other than let them know mine was a genuine e mail address for more spam. Since I have a high speed internet connection I set everything up to repeatedly e mail them a copy of a (5 MB) Steps song called "You'll Be Sorry" .... Very childish but INSTANT SUCCESS! They removed me the same day! and I even got an e mail apology from the company director.

Spam the b&%$??"^ back!

Cheers

John

From: David Voss
Topic: 1281 Message: 1281

Some of them are, but many are well-financed hucksters sitting on top
of very big bandwidth and making tons of money for the Russian mob,
the Asian triads and various domestic criminals. These people are
also too ugly to have a life, but they are very rich. The thing that
definitely won't work is to reply to them - the email headers are
totally forged and your reply will just wind up in some lazy
sysadmin's null folder.

And now back to topic -

I've just ordered a PCR1000 and I'm terrified by all this talk of
EEPROMs turning to toast. What exactly are the conditions under
which this happens and what software should I avoid? I'm planning to
back up the unit as soon as it is turned on...

with thanks

David Voss (defrocked physicist and former ham operator)

Does no one moderate this group to prevent SPAM?

It's not an arduous task and keeps out this sort of undesirable material.

From: John Walters
Topic: 1286 Message: 1286

The only E group I belong to which is not experiencing problems with spam.
Is a registration or perhaps it is called subscription group where the
Moderator accepts new comers. This group is a related to an unique
medical condition and is still trouble free from spam.

The main problems, from my experience, seem to be associated with
three Amateur radio groups and also the three Sony digital camera E groups.

We can ignore the spam easily but at some stage we will have to address
the problem.

The problem in trying to reply and irritate these unwanted sources is that they
have a fake address that is not registered, there is apparently something
In their html code that has the correct source address but we only see
an address that is of no significance and it bounces.

This is a valuable group to us all with PCR1000 and it is important to keep
It going so that we can solve our problems, discuss software and help new
purchasers of the PCR1000.

Some form of registration or membership control seems to be the only answer.

Regards

John VK3EJW

This is the ONLY answer but the moderator (is there one?) needs to action.

I use 'Mailwasher' for my email and this at least prevents the SPAM getting right through, but is ineffective with
groups such as this as he SPAM comes in the back door as I can't block the group address. Mailwasher is free BTW.

Cheers.

Hey. I hadn't thought of that idea.. Why don't we simply ask the spammers to "MOVE TO ANOTER FORUM". That should take care of the problem.. <grin>

Who ever started this thread labeled "kids" is right on the money. My eight year old daughter spends a lot of time in my den (which is also my radio shack). She enjoys "listening to other countries" as much as I do. she is fascinated by it. My computer is always on, not only driving the PCR-1000 but also doing other chores like checking for emails. including this forum.

One would think that the last place pornography would be rampant would be in a shortwave / scanner discussion board.

1296. RE: [PCR1000] kids

Yahoo group: PCR1000
Date: 2003-06-14 12:56:02 UTC
From: Marty Grove
Topic: 1277 Message: 1296

I have run across some old files (mpegs, avi□s, etc...) of the like on various radio boards and have tried tuning SSTV with various software (the Bonito software, for one). But SSTV never really much interested me. Not because of the content, but I guess I□m one of those guys who listens to my various radios for just that to listen. I prefer to get away from my television set and not watch more TV (SSTV). With radio, I can be listening and doing other things (like programming).

Years ago, Art Linkletter hosted a show titled □House Party□ (I think Bill Cosby hosted a similar show called □Kids say the darndest things□ many years later). This show was on in the early 1950□s . when television was in it□s early years, but radio was still going strong and full of very □colorful□ radio shows. Anyway, Art Linkletter asked one of the kids this question . □Which do you like better; radio or television?□, to which the kid replied □Radio because the pictures are better!□

I guess I□m one of those □kids□ .

1297. MODERATED ICOM PCR1000 GROUP

Yahoo group: PCR1000
Date: 2003-06-14 14:05:43 UTC
From: Richard Wiglesworth
Topic: 1297 Message: 1297

OK,

I have read a great deal of what has been going on and instead of me complaining about the spaming problem and moderation problems I have decided to start a New group relating to the ICOM PCR1000. There will be no spamming and by chance a member spams he or she will be removed from the group. I understand peoples concerns and that is why I have chosen to do this. All of my Yahoogroups are moderated to help eliminate unwanted messages. The new group is in the Ham Radio section of Yahoo Groups. The name of the group is ICOM_PCR1000.

Thanks,

Richard Wiglesworth / N0NKU

1300. Re: [PCR1000] MODERATED ICOM PCR1000 GROUP

Yahoo group: PCR1000
Date: 2003-06-14 15:01:02 UTC
From: Frank(ee)
Topic: 1297 Message: 1300

Hi Richard,

I appreciate your good intentions, but I would suggest you first scan people who want to contribute to your mailing list, because the way you want to do it (banning those who spam) won't be much use: spammers use a different (fancy) e-mail address for every message and by the time you have banned them, they have already sent their new crap from a different address.

Hi

Looking forward to this but !!!

be careful there is one for the Icom Pcr 100 i nearly joined that

i cannot find one with Icom_Pcr1000

there is however a group called PCR-1000 which already has 376 members
and is moderated already

is this the new ? group or one we have missed in the past

cheers for now

Keith D.

I bet it goes for over $300. That would be $40 more than if you bought it
new from HRO. Its already upto $285 and has met the "reserve".

I wonder if its owner had a reserve or $250 on it?

Ebayers are such fools!

Topic: 1315 Message: 1320

I don't think that HRO has the PCR1000 in stock anymore at the $269 price, only the more expensive Bonita(throw it away) Version. So, the one I'm selling must be worth at least the current price (374.95) less the Bonita Upgrade price (68.95). I don't know, but I'll take what I get ($$$) !

BTW, I listed with no reserve on this, just a $1.00 minimum bid !

I don't think EBAY buyers are fools, it's just about what the true market value is on what you sell. From a sellers perspective it's great. As a buyer, well I want the lowest price... sometimes you find that on EBAY and sometimes not.

$0.02 worth from me.....

I bought 5 of the $269 models last week and they claimed they had plenty in stock. The Bonito version is one of the options rather than a replacement.

So if you listed it with no reserve why does the auction say "reserve price met"?

I think you got a good deal on what you bought !!
When I look at the HRO WebSite, it says:

Manufacturer: ICOM
Item : IC-PCR1000 BLKD
Description : ***system stock only*****COMPUTR CONTRLLD RCVR CELLBLKD
Price : $269.95
Additional information :

Now discontinued. See IC-PCR1000 02 BON
Stock status: __________

Looks to me like they refer you to the BONITA version , at the higher
price ?

I think I'll conceed that this model is discontinued. Have you tried looking elsewhere? Places like Lentini or AES etc?

Looks like Icom are pulling an Ten-Tec. Same product with different packaging that nobody wants equals more profits.

FWIW,
You can buy non-blocked PCR-1000's from Radioworld
in Toronto. Albeit, a lot more expensive than the $269 specials.

Try also:

KJI Electronics
The Ham Station
KK7TV
R & L Electronics
GigaParts
Hamcity
Texas Towers
Burghardt (the ones with the really tasty shop assistant!)
chq-inc

All of these places have a .com address so numbers should be easy to find.

Good luck and don't forget to tell us if you strike gold.

1330. Giving Up On Bonito

Yahoo group: PCR1000
Date: 2003-06-18 14:32:02 UTC
From: Jerry
Topic: 1330 Message: 1330

Hi, I purchased a PCR1000-BON with the Bonito software a couple of weeks ago. The radio works great, but the Bonito software won't run on my computer. Everytime I start the program, I get a "IntAudioIn" error. It appears the software doesn't like my soundcard. I'm using a Creative Ensoniq soundcard. Yes, it is bi-directional as per the software requirements. I've tried every combination of soundcard settings that I could find and installed the latest drivers.
I run a bunch of other DSP and decoder programs on my machine and soundcard and all work fine.

Icom told me to contact Bonito, Bonito was far less than helpful, basically telling me "good luck". Soooo..up goes the software for sale on Ebay. Maybe I can make enough back to almost pay the registration fee for TalkPCR, a software package the really DOES work!

Topic: 1330 Message: 1331

Jerry... welcome to the club! In my opinion, the Bonito software is absolute crap.

Frankly, when I purchase software, I expect it to work on my computer. I have three computers I have tried it on here at my house, and all three fail to run it (for various reasons). I too have tried many times in the past to get information from Bonito about the problems I have had, without any success at resolving the problem(s).

First, the use of a dongle... no one requires such a device anymore.

Second, for the longest time (and this goes back a couple of years to when I acquired my RC-5 software), I had NO English version of the documentation; although I was repeatedly told it was coming. So I put the software aside (because I couldn't get it to operate without the documentation), waiting on the operators manual. It took nearly a year after I purchased the software until I finally got an English version.

But, even after the documentation, I could not get it the software to work. I had some limited success with the RC-4 software, but I had spent the extra money for the RC-5... and I felt I deserved to have a working version of the software.

Finally, the support is practically non-existent.

From what I've been told, some of those who have had success with running the RC-5 software say that it isn't all that impressive anyway.

Yeah... I admit I'm displeased. I have spent a lot less on software that has performed much better, provides occasional updates, and has nearly excellent support.

For all these reasons (and I'm sure many others), Bonito's RC-5 sales may have been dropping off... which probably led them to work a deal with Icom to bundle the software along with the radio.

Oh well... live and learn. This software has always been a huge pet peeve of mine. I won't be doing any business with Bonito in the future over this experience, and I will take every opportunity to inform others about my experience with this software.

Marty

1339. PCR1000 MINT NEW for sale

Yahoo group: PCR1000
Date: 2003-06-19 21:41:50 UTC
From: Richard Shaward
Topic: 1339 Message: 1339

Hello list -
I have an MINT unblocked PCR1000 unit that I purchased in March and I have only used it for about a total of 5 hours. I have not had the time to play with it and do not foresee myself having time to use it to its potential and I would like to unload it. My hand held uniden is sufficient for what I listen to and I don't have to carry around a computer to do it !!!!! It is still in warranty obviously. Offers accepted. Any questions just ask. My ebay username is jarminius if you wish to check me out and see that I am legit.

From: Richard Shaward
Topic: 1339 Message: 1341

I paid 520.00 total in March (bought it from Europe). I will consider any fair offer down from there. It is mint with box, manuals, software etc in mint condition. It is unblocked and comes with Icom version 2.0 (latest) software.

Richard

Picked one up from Ham Radio Outlet web (hamradio.com) about five weeks ago. They may still have them.

<mark>

1345. PCR-1000 without Bonito Software

Yahoo group: PCR1000
Date: 2003-06-22 02:03:35 UTC
From: Kenneth Brahmer
Topic: 1345 Message: 1345

Good news: I found one today. I drove 100 miles to the HRO in Atlanta, where they had a sign in the store indicating the desired unit at $269.

Bad news: They had ONE! It was their demo...they were using some third party software. I said I was interested even in their demo. They didn't know where everything that came in the box was. They seemed content to offer there was a Bonito version available and the earlier version was discontinued. The sales people were more interested in chewing the rag with each other...the phone was ringing off the hook and the personnel tried to see who could ignore it enough until someone else got it. Then I explained interest in an antenna as well...they looked for software on the internet I could download to supplant the ICOM software disks that they knew were missing...didn't know what else was missing. Some Dude (not an employee but a "regular" there) was explaining how the disks wouldn't read and he'd done something about something...a kid you wouldn't want touching your rig. Then an employee explained it wasn't until (some short time ago) that they had a PC to hook it up to...and no one seemed to know what software they were using...but it wasn't ICOM, TALK PCR or Bonito. The "regular" took over the conversation and the salesman walked off to play with another radio in the rack.

Summary: As employees and "regulars" chatted away ignoring me, I ambled toward the door...an employee brushed by to go outside and have a smoke...and I left.

Conclusion: HRO in Atlanta doesn't need customers...they need sales personnel.

Comment: In my place of business...I'd fired them on the spot...to have let a customer with money to spend and specific about what he wanted...an item that was there in the store...walk out without a "kiss my foot" from anyone employed there.

1346. IC-PCR100 vs IC-PCR1000

Yahoo group: PCR1000
Date: 2003-06-22 10:21:12 UTC
From: johnjewitt20032003
Topic: 1346 Message: 1346

What is the difference between the IC-PCR100 and the IC-PCR1000. Does both recievers come with the same software, if not what software does the IC-PCR100 come with. Is the software for the IC-PCR100 compatible with windows xp, if not is there a download for an updated version. Where can I find some screenshots of the software that comes with the IC-PCR100. Hope someone can help, thanks in advance, john.

1348. SV: [PCR1000] IC-PCR100 vs IC-PCR1000

Yahoo group: PCR1000
Date: 2003-06-22 16:29:50 UTC
From: Folke
Topic: 1346 Message: 1348

There is also some other differences. You can´t put the DSP-unit inside
PCR-100
and it can´t decode DTMF. Beside this I think the PCR-1000 is slighty
better designed
in the front-end, filters and so on, this will be noticed when using
them in areas with strong
signals, the PCR-100 is easier overloaded. For more details, log in to
ICOM:s web.

/Folke

I found your commennt on HRO not so funny, i had a similar experience at HRO San jose store.It seams if your not a member of the club you must stand on your head to get service, sometime its difficult to tell who is an employees and not.And for gods sake dont tell them that your not a ham .I made that mistake and the sales man rolled his eye at me. I did get my pcr 1000 for the 269 several months ago.

I am guessing that you mean the command list.
Try:
http://users.pandora.be/on1dqd/PCR1000.htm
<http://users.pandora.be/on1dqd/PCR1000.htm>
Scroll down to the bottom of the page and there are
three different sets of command.
Good luck
Terry

1357. Trunk PCR1K not turning on my PCR1000

Yahoo group: PCR1000
Date: 2003-06-25 05:46:40 UTC
From: milk4fires
Topic: 1357 Message: 1357

Hello Group,

I've been using TalkPCR without a hitch, but just discovered Trunk PCR1K (PCR-1000 v0.5.40 Beta) today. Unfortunately, the PCR1000 is not powering on with Trunk PCR1K. When I go back to TalkPCR, it powers on fine again.
Do these two programs use different methods to turn power on to the PCR1000? I imagine there is a pin on the serial line that must go high or low which turns on the PCR1000, but for some reason, Trunk PCR1K is not sending that command?
Anyway, if nothing else, I thought I read months ago something about a modification to the PCR1000 to allow it to continue to stay on and active even when the serial line is removed. If I can't solve the software turn-on problem, possibly I could just strap the PCR1000 to always be on if the rocker switch on the front panel is on? Does anyone have details about this mod?

Thanks,
Kelly
Salt Lake City

Nothing to it.

Plug the unit into the serial port with the supplied cable... install the software... decide on your antenna (more then the portable antenna supplied), route the coax and mount the antenna.

Next, you may want to get TalkPCR software, as a better choice than the supplied stuff. Immediately back up the eeprom with the TalkPCR as it is a bitch to repair if its brains get scrambled otherwise. Find info at: http://groups.yahoo.com/group/TalkPCR/

The best overall antenna for the PCR series is the discone, possibly still available from Radio Shack, or certainly Universal Radio (http://www.rffun.com)

BTW this group got SPAMmed pretty badly recently and most people are on a new group: http://groups.yahoo.com/group/ICOM_PCR1000/

From: Frank(ee)
Topic: 1365 Message: 1366

Navtex is not available all the time. Typically a station will only broadcast messages for a maximum of 10 minutes. The next slot of 10 minutes will be occupied by another station, perhaps distant from where you live. You can find more detailed information about the Navtex stations and time slots here: http://www.iprimus.ca/~hepburnw/dx/navtex.htm
I get best results when I tune into 517 kHz (in USB mode 2.5 kHz bandwidth), but when the station is strong enough, you will also hear the signal on 518 kHz.

Good luck!

Frank

Easiest thing would to write some custom webserving application that will control the Icom, and the
stream the audio over via Realplayer or Other "Audio Streaming" Device.

From: Crazy Californian
Topic: 1381 Message: 1381

Hi All,
The latest version of Trunk PCR is now available for downloading.
It now works with the Icom PCR-100 too..

I have tested it out on Windows Versions 95, 98SE2, ME, 2000 Pro, & XP Pro.
It was tested with a Belkin F5U409 (cheap) USB Serial Adapter, so it It should work with other USB devices too...

Check out the web page for all additions and bug fixes...
If you find any other bugs or have comments, please send 'em...
http://104452.home.icq.com/trunkpcr/TrunkPcr.html

The UT-106 is for audio DSP processing. This option will not help you
receive
digital radio transmissions of any form. For police bands, you may consider
a Bearcat 708 with the new digital capabilities, www.universal-radio.com or
if you
are interested in digital AM broadcast radio reception, Ten Tec has upgraded
their
PC receiver to receive these new BCB signals www.tentec.com.

1384. Modifyable or Not?

Yahoo group: PCR1000
Date: 2003-07-21 02:53:48 UTC
From: russ_gladden
Topic: 1384 Message: 1384

Hi Everyone,

I'm considering getting a PCR-1000, probably a U.S. model with a serial number in the 6000 range. I've seen mixed reports as to whether or not the hardware modification floating around the 'net will work to restore full coverage to a model this recent. If anyone with a PCR-1000 of this vintage has attempted the mod, please post your results here. I'm located in Canada where full coverage is legal.

Russ.

Dave,

I suggest you look into buying the USB adapter sold by the
Pfranc group (they also have nice GPS cables):
http://www.pfranc.com/usb/usb.shtml

They UK-based representative is:
http://www.lynks.co.uk/

This adapter is supported on all the OS out there (used it fine
under Linux) and it's priced reasonably, IMHO. I have bought
one more than a year ago and it always worked flawlessly.

Bye, Luca ON/IK2OVV

1391. Problems with new PCR1000

Yahoo group: PCR1000
Date: 2003-07-25 14:26:39 UTC
From: Jason
Topic: 1391 Message: 1391

Just got a PCR1000 yesterday from Universal Radio. I've found that sometimes after changing through maybe 30 different frequencies, the frequency on the radio doesn't change despite what the display says. It's like the radio is locked up. I'm having the same problem with ICOM's and Bonito's software. My COM port is set at 115200 so I guess it's fast enough to communicate.

When you click on the dial to rotate through frequencies, it goes quickly... that is great but after I stop clicking it and listen for a bit and hold down the mouse over it again, it goes really slow. Is this typical?

So far, I'm not really happy with it. if you run ICOM's software and close it, you can't run Bonito until a reboot. Bonito gives a COM port error. Really not impressed with Bonito at all. I think I'll stick with Icom's software!

Thanks for the help,

Jason Bishop KE4ZKY

1392. Re: [PCR1000] Problems with new PCR1000

Yahoo group: PCR1000
Date: 2003-07-25 14:59:40 UTC
From: Frank(ee)
Topic: 1391 Message: 1392

Hi Jason,

I don't know the Bonito software, but I was never satisfied with the ICOM software. Also tried their new version not too long ago, but I am still not convinced.

A couple of years ago, however, I bought TalkPCR, which may not be as handsome (graphically), but does all its tricks (at least as far as I have tried them: I am old-fashioned enough to still manually tune through interesting bands - must be my Short Wave background) flawlessly.
You can download a fully functional demo at http://www.mahy.demon.co.uk. If you want to use it, it is not expensive at all (don't know its actual price, could not find it at the site, but when I bought it, it was -I seem to remember- ? 25 or 35 [pounds sterling, in case you should not get the actual symbol]), and it is well worth its every penny - as other users will be able to confirm...

Anyway, Jason, the PCR1000 is a wonderful little box and I hope you will enjoy it as much as I have been doing for the past 4 years.

Good luck

Jason,

if the speed it set too high on the com port it may
lock up the system, the best com setting is like 9600
baud. its more stable and not as susecptabe to
electrical noise. also check the cables the hardware
could be some of the problem.

1394. Best Place to buy Icom UT-106 DSP?

Yahoo group: PCR1000
Date: 2003-07-26 02:58:09 UTC
From: stalkermon
Topic: 1394 Message: 1394

Looking for the lowest price any of you have seen for a Icom UT-106 DSP module...I really need one, and have finally gotten it cleared by the wife :)

Any good places here in the US?

Thanks,
Scott Dernbach

P.S. I found that the Belkin F5U103 USP to Serial converter works GREAT with the Icom PCR-1000 and ALL the software I have tried so far seems to work great! (I found them on eBay for $21.00!!!)

I got my FIRST fax transmission Thursday night, and was SOLD! I now need to clean up the SSB so that the faxes come out cleaner.....Also want to try SSTV, but never seem to find any signals for this.

The big problem I have is that I live in a gated community, and they do not allow antennas, so I need to find some good plans on a home built antenna for the 6-22 Mhz bands.....any ideas? I already have the Scantenna in the attic, which works GREAT, but want to do some lower freq work!

Thanks for responding to my post!

Try listening around 14.230MHz for SSTV. Its not always there but that's the hot spot for activity.

Mark,

If you use a piece of lock wire made from stainless
steel if small enough can be strung on the eves of
houses and it is very hard to see, i have done this
many times in the past .

Howdy, Mike!

We seem to be addicted to the same sorts of receivers! <<grin>>

Re. Bonito software; either I've been very lucky or more persistent than most, but I've been pretty successful with the Bonito software package.

The manual (and Bonito customer support) really DOES blow. The software itself isn't very intuitive or user friendly. And if the manual blows, dongles SUCK!!! <<grin>>

Maybe I'm not asking too much of it, but I find it quite capable of handling my needs in controling the radio, dealing with RTTY, handling weather satellite downlinks, and decoding HF FAX... all on an ancient laptop running a 120 MHz Pentium.

See ya at the Baraboo hamfest???

73's,

Tom, W9LBB

PS - Today, the Racal bug bit me again. Got high bid in on EBAY for an RA6778C.

1405. null modem help

Yahoo group: PCR1000
Date: 2003-08-04 15:40:49 UTC
From: wes5502000
Topic: 1405 Message: 1405

I recently purchased the palm M150. I'd like to use it to run my pcr 1000 with pcr pilot. At one end of the hotsync cable i have is a usb connection. how do I install the null modem adapter there? Do I need the pin layout to make my own?

1407. 9600 baud port. Anyone using this?

Yahoo group: PCR1000
Date: 2003-08-05 16:18:16 UTC
From: Jason
Topic: 1407 Message: 1407

Anyone using their 9600 baud port for decoding? I've got some
decoding software that will work with either a 9600 baud connection
or a tap off the discriminator.

Any help with this is greatly appreciated as I'm new to the
PCR1000 family.

Thanks!

73's

Topic: 1198 Message: 1408

Hello Mark.

The Bonito software is only half of the problem.

As a copy protect measure, the software won't run unless you
have the dongle that comes with it.

Dongles can be had from the Bonito distributor, but be prepared
to pay in the neighborhood of $100 for it. One way or another,
Bonito's gonna get thier pound of flesh.

1411. DSP Have I Got It ? Stupid Question ?

Yahoo group: PCR1000
Date: 2003-08-09 08:11:27 UTC
From: originalcom
Topic: 1411 Message: 1411

Hi All !

I've just purchased a PCR1000 second hand after using a PCR100 for a couple of years. So far I'm very impressed :-) My question is have I got the DSP option, as when I choose DSP from the toggle button and then switch it on from the DSP panel it seems to work ! Is this the full DSP option or is it a basic noise blanker that all 1000's have - like the PCR100's ? It seems to work well whatever it is.

Regards Jon

What happens when you open up the unit and look at the DSP socket?

Would you buy a house without looking in the basement?

Would you buy a car without looking under the 'bonnet'?

What else is in THERE?

Best of luck,

Topic: 1411 Message: 1413

Hi Jon

If the DSP is not installed, you don't get the toggle button in the Icom software.

The noise blanker on/off is a different on-screen button.

If you open up the case (carefully cos of the speaker wire) it's obvious whether you have the UT-106 installed or not. It sits loose inside the PCR-1000 top back left as viewed from the front, connected by three cables.

Mark

From: faramacho
Topic: 1415 Message: 1415

I have been reading this board for about a month with the hope of learning more about what the PCR 1000 is capable of; and although i have learned alot from reading the posts, i'm still not sure what most people are listening to on their PCR 1000's. i know the frequency ranges, (and i am a long time police scanner user), but still don't know what type of broadcasts you guys are listening to. any help or education would be appreciated. (I'm hoping to graduate from police scanners to something more exciting and sophisticated) Fara

Pirate broadcasters.... ham radio... MARS stations... intellegence services numbers stations (CW/SSB) ... USAF Global HF Network (USAF aircraft to various base stations... routine traffic, occasional in flight emergencies... and of course the EAM's "Sky King Sky King do not answer, message follows...."), SatCom traffic... Digital modes like PSK31, RTTY, SITOR etc with decoding software...it's endless.

my PCR1000 + DSP

73 MARCO
Hi All !

I've just purchased a PCR1000 second hand after using a PCR100 for a couple of years. So far I'm very impressed :-) My question is have I got the DSP option, as when I choose DSP from the toggle button and then switch it on from the DSP panel it seems to work ! Is this the full DSP option or is it a basic noise blanker that all 1000's have - like the PCR100's ? It seems to work well whatever it is.

Regards Jon

So then does the dongle that currently ships with the PCR-1000 also work with later versions of RadioCom (like 5.1), or must a new dongle also be purchased when upgrading? Is it a serial or parallel port dongle?

Russ.

Serial. Seeing how the upgrade is available over the internet, I'd imagine
you'd
use the dongle shipped with your radio.

Thanks. I've just ordered a PCR-1000 and wondered what my upgrade options would be. Given the lukewarm reviews that RadioCom is receiving, I'll probably end up using TalkPCR as my default listening program anyway.

The ICOM software is not that bad, but it lack some
usefull functions.

The Talk PCR is not that good, the program has several
bugs, that have never been solved, and have a hisory
of killing Eeproms, but the functionality is better.

The choise of software all depends on how you want it.

I will recommend you to try both.

I don't have any experience with the radcom software.

1431. Com port setting

Yahoo group: PCR1000
Date: 2003-08-17 07:57:42 UTC
From: Frank
Topic: 1431 Message: 1431

I just purchased the PCR1000 and after five hours of trying everything, can not get the radio to communicate through COM1 (on either of two Toshiba notebook computers) with the Version 2 Icom software. I had the Bonito software running via a Serial/USB port for awhile and when I turned the computer off and back on, I have once again lost communication...but now on the serial/USB port. What are the com port settings suppposed to be for the Icom software, etc?

1432. Re: [PCR1000] Com port setting

I couldn't get mine to communicate on com port 1, also. So, in the bios of my laptop (Dell XPI-CD), I changed the serial port to com port 3 and in the options of the software I change that to com port 3. Works fine here now for 2 years non-stop.

1433. Re: [PCR1000] Com port setting

Yahoo group: PCR1000
Date: 2003-08-17 18:34:36 UTC
From: mark@dxradio.demon.co.uk
Topic: 1431 Message: 1433

Some laptops are set-up by default for things like Infra-Red comm's or other things on "COM1". Therefore you shouldn't assume that com 1 refers to the 9-pin serial port.

You'll maybe need to go through the BIOS for the laptop or check the manufacturer's website for how to configure it.

1434. Zapro

Yahoo group: PCR1000
Date: 2003-08-17 21:53:37 UTC
From: john.pethard@surfeu.de
Topic: 1434 Message: 1434

Hi Everyone,

I've been following the debate on Zapro with a lot of interest.
Are we all thinking about the same problem ??
I wonder....

There are three states to consider when that vast and black CuNim looms up..
I just disconnect the antenna - and hope for the best.

First of all - the direct strike - on your antenna.. Forget it, there is no real protection. Lots of power dissipates
in your antenna, feeder, receiver, house wiring etc...
I've experienced a few direct strikes over the years in aircraft. Loud, very bright, but generally harmless. Ok, there is probably a burn at the entry and exit points. There is a high probability of the compass system being somewhat unreliable afterwards - a good excuse for returning to base !! However, this is a demonstration of the Faraday cage. You are quite safe inside... Of interest, we never experienced radio problems afterwards - apart from HF, with the loss of the wire antenna.

Secondly, the indirect strike - where the 'impact point' is within a few hundred meters. It doesn't matter which way the current flows - cloud to earth or earth to cloud. The main point is that the current involved is high - very high. This happens in a very few milliseconds. So, we have an immense current pulse with a fast rise time and a fairly fast decay.
Not unlike EMP - but that tends to be on a rather different scale. Basically, we have a pulse of RF energy with considerable power - probably enough to destroy any semi-conductor front-end. Protection available? - Possibly.
In the olden days the use of a tiny neon lamp across the input discharged the pulse - probably.. However, the striking voltage of such a lamp is of the order of 70 - 80 V...
But:
The circuit diagram of the PCR1000 shows that the antenna connector is isolated from the front-end by 2 capacitors in parallel (0.1 and 0.001 uf). I doubt whether these would survive more than 60 or so volts... The path to earth (well, the board ground) is via a combination of resistors totalling 1.3k and a parallel path containing expensive ICs.... I say no more. The use of 2 diodes across the antenna input would limit the voltage to about 0.6V - until they fried, followed by the demise of the rest of the front-end.
There are a number of other devices designed to protect receiver front-ends but what will fail first ??.

However, diodes and VDRs do seem to have a role in limiting (but probably not eliminating) damage in the third case - Static.

So, Static buildup on your antennas could be the primary cause of premature death of a PCR1000 (or any other semi-conductor based receiver). When we think of it, the majority of antennas we use do not have a direct ground connection. Consider the 1/4 wave whip, the dipole and the discone - all bits of metal isolated from ground and connected directly to the receiver front-end. Static buildup will happen. Polarity is immaterial. I've drawn a 1" spark when reconnecting a HF vertical some 30 minutes after a thunderstorm had passed. Thankfully, the ATU provided a direct ground path (DC wise) and the receiver was old (valves/vacuum toooobs), so no damage apart from a fright. So, what can be done? A direct bleed to ground of the antenna is obvious. Something like a folded dipole provides such a path. I've also seen recommendations of a resistor across the input - even as high as 100k - just as a static bleed. Lower values would be more reassuring.. Parallel diodes would limit the standing charge to about 0.6V.

In summary:-

Direct strikes - no chance - disconnect antenna and hope for the best....

Indirect strikes (and EMP) - disconnect antenna and again hope for the best..
In the olden days they (the authorities) recommended placing all comms gear in an RF tight box for the duration of a possible EMP hazard period.
After all, lightning produces a massive RF pulse - enough to fry most things.

Static buildup - either a direct DC path to earth for the antenna - antenna type or bleed resistor to earth or diodes.

The choice is yours..

Let the debate continue..

John Pethard

1436. Re: Software

Yahoo group: PCR1000
Date: 2003-08-19 04:29:18 UTC
From: radiotronicgizmo
Topic: 680 Message: 1436

I guess I have the same question -- I am trying to dig through all the messages, but It is difficult -- I am in a hotel with a slow laptop.

I bought the pcr1000 today, the bonito software that came with it is almost useless, I waded through several pages till I got the talkpcr and tried it.. but it isn't what I hoped it to be.

In fact --- the Icom software seems to be pretty good. In fact, I had an R7000 for 10 years, got rid of it last year, and this software seems to emulate the r7000 exactly.

so, in my first 2 hours of owning this radio, I have tried the bonito, the ICOM, and the talkpcr. I am throwing the bonito cd out the window, deleted the talkpcr, and using the icom 2.0.

what else is there to try? So far i am just using command/control, no data decode, etc. I like the bandscope function on the icom and the ability to click on a signal to tune to it.

i'll keep looking, but when you ask about software, folks usually come out of the woodwork, I would like to hear the pros and cons of any PCR1000 software -- and it the meantime, i'll dig through the archives and see if i can figure out the answer -- and try all the broken links on all the pages listed and see if i can keep from getting lost...

cheers,

stuck in a LA hotel

:) but with a PCR1000 radio and laptop.

Hi Radiotronic,

I'm afraid I won't be able to give you advise you like, because I would suggest you TalkPCR, which is what I bought, after trying out every piece of PRC1000-software I could find. However you may want to check the PCR-1000 Resources website at this URL:
http://planet.gcn.ou.edu/ahern/home/pcr1000/index.html

Good luck!

Frank

Dear Scott,

Indeed the Icom (I love this trading mark) software looks like a RxTX but it s allmost like CanadaDry "looking like whisky but it is not"
in fact, the way you will manage the Icom V2 will help if you take the time (just few days) by using the TalkPcr
that has nothing to do with the Icom's
just have a look to Dan web pages :
http://www.webdeals.net/talkpcr.htm

he talk about the talk Pcr with word that may convience you.
have fun with your PCR 1000 !

Subject: [PCR1000] Re: Software

I guess I have the same question -- I am trying to dig through all the messages, but It is difficult -- I am in a hotel with a slow laptop.

I bought the pcr1000 today, the bonito software that came with it is almost useless, I waded through several pages till I got the talkpcr and tried it.. but it isn't what I hoped it to be.

In fact --- the Icom software seems to be pretty good. In fact, I had an R7000 for 10 years, got rid of it last year, and this software seems to emulate the r7000 exactly.

so, in my first 2 hours of owning this radio, I have tried the bonito, the ICOM, and the talkpcr. I am throwing the bonito cd out the window, deleted the talkpcr, and using the icom 2.0.

what else is there to try? So far i am just using command/control, no data decode, etc. I like the bandscope function on the icom and the ability to click on a signal to tune to it.

i'll keep looking, but when you ask about software, folks usually come out of the woodwork, I would like to hear the pros and cons of any PCR1000 software -- and it the meantime, i'll dig through the archives and see if i can figure out the answer -- and try all the broken links on all the pages listed and see if i can keep from

getting lost...

cheers,

stuck in a LA hotel

:) but with a PCR1000 radio and laptop.

Ok you may need big powerful and speed CPU.
I use an old PC bought at a brooker for 200 € last year,
with a 450 Mhz and it manage well all my radio solftware ... Except, may be (!) when I try to use DSP softs ...

good luck with your PCR,
in France PCR1000 is sold with no software except the Icom's and that's a good idea ; then one can choice if one use the Icom's or a third party one,
but the Bonito make me laught, is it lile Captain Kurk "enterprise" controlling desk !!!

Sincerly ;

Subject: [PCR1000] Really Great Posting!!!

Many Thanks! That was a really great article on Talk PCR. After I first
got my PCR I was having troubles with RadioComm. The folks at Bonito
told me up upgrade my CPU. At the time (just 1 year ago) I just got
a P4@2.40GHz and there really wasn't anything else... Then I discovered
TalkPCR and sent in the $ very quickly. Mainly out of gratitude. It's a shame
that you can't buy a new PCR without the Bonito package. They were going for
about $265 without, now $335 with Bonito.
That 2.4GHz CPU is now sitting on the shelf. I'm hoping to find a microATX motherboard
to run a MusicMatch jukebox/radio/dvd/mpg3 player. Plus I'd like to have a
scanner/shortwave,too.

Thanks Again!

1441. PCR1000 Software : Scanner VS Reciever

Yahoo group: PCR1000
Date: 2003-08-19 19:32:20 UTC
From: radiotronicgizmo
Topic: 1441 Message: 1441

I guess one of the things that makes using bonito and talkpcr frustrating and ICOM's appealing to me is something to ponder.

I thought about what I didn't like on all 3, and realized that there are two kinds of users --- communication receiver types and scanner types.

I am used to communications receivers and want the software to behave like it is controlling one. ICOM's software does this. You can control the volume and squelch by sliding a bar back and forth and the radio reacts instantly (for an example).

On the other two programs, you get a real great VISUAL represntation of a knob, but it doesnt act like one. You have to click away, or hold your mouse down and watch it slowly ramp up or down, and hope you stop where you want it.

THe comm rx software treats it like a real-time control- the others, make it look pretty but doesnt act like a real control.

Same thing with the frequency selection. WIth a comm receiver, you want to be able to change frequencies quickly, spin the dial, punch a memory key and off tune from it, etc. The BIG tuning dial is the inteface between radio and person.

With a SCANNER, everything is viewed as memory assignements and channels. tuning is not done --you ENTER a frequecy and store it in a bank for later recall or scan.

two completely different concepts.

seems to me -- and I still have less than 2 hours using the PCR1000 or either of the 'big 3' control programs, that ICOM is a communications reciever program and the other two are scanner programs.

I'll download talkpcr again tonite and try it again. I got frustrated last nite when I kept clicking and clicking the megahertz display/button and it rolled down the 100khz, etc. ICOM lets you use the keypad to tune easily. Bonito - was so freaking slow on everything, it kept getting behind on keystroke actions and hanging up.

I tried using bonito 4.5 3 times and had to reboot 3times after about 2 minutes.

one of the things i like about the ICOM is the bandscope funciton.

You look at a small spectrum and when you see a bar jump up, you can click on it and it tunes the radio to it. THis is a great way to scan. (ok not scan -- but look for things to listen to in an unkown environment, like sitting in a hotel room on the other side of the country -- pick a freq, like the middle of business comm - - and see what is active in the bandpass, and quickly listen to what pops up)

I couldn't find a way to do that with the talkpcr -- maybe someone could help me. there were a bunch of pop up windows for controls and one was a spectrum display, but it seemed totally unrelated to the radio, I.e. it wasnt centered tuned to the current radio tuned freq, etc.. looked like an independent utility. and I gave up after a few minutes.

maybe if someone could give me a few tips on how to use talkpcr like a radio would be a great help to this newbie moron.

thanks in advance.

1442. Re: [PCR1000] PCR1000 Software : Scanner VS Reciever

still no agree with you I have spent long night hours in my youth years scanning with Icom Rx,
and have had also the experience about the scanners , I still say that talk Pcr is a software to pilot a Rx.

But you may be right when you say you'd rather try again talk Pcr.

I do agree with the fact that Icom's fancies much more than the TalkPcr does.
But except this precise point all technical point are forecast by talkpcr.

What I do agree is when someone will sell a sort of "job control" pad for radio that makes you feel as is you had a job control a rx in yhz buour hand, assurely I would by it.
The big button, ready to turn, into two speed ... What a big deal it would be.

But for other aspects, sorry Talk Pcr is a fantatic soft.
You may use the big button and click right to sick with you mouse or dble click to de-stick it.
Of course, scanning with the figures 100 hz by 100 hz, I would already be dead !

Take you time, forget that talkpcr is allmost uggly, when you remerber Icom's ; forget Icom and take your time again to scan, search, tune, and so on.
When you will have tryed all the possibilities of talk, I guess you will forget the look.

After, when you'll be for Talk, let me know.
by the way, you konw there is a forum specially made for this soft that s called TalkPcr yahoogroups, you may ask people there.

Here is a for for users of PCR1000 whetever the soft would be.

Sincerly ;

From: liam_mcf
Topic: 1445 Message: 1445

Hello guys!

I have an Icom PCR1000, and i am getting rid of my laptop, so wondering if anyone out there would be intrested in swapping there base scanner/Reciever for the Icom PCR1000! May consider handhelds too!
Post or drop us a line at liam_mcf@... if intrested..
Im in the Glasgow area!

Cheers

1446. a knob

Yahoo group: PCR1000
Date: 2003-08-20 14:03:01 UTC
From: Pres Waterman
Topic: 1446 Message: 1446

With all the comments about software acting like a radio should, I thought I would remind the group(s) about a USB knob I use with TalkPCR. It does not work with iCOM software because they left out the ability to tune with keystrokes.

See it at http://www.griffintechnology.com/products/powermate/blackpm.html

Basically, it is set to emualate -> when turning right and <- for left, or up-arrow and down-arrow as you turn it.

Different things happen when you push in the knob and turn also. It can mute and control volume. It can also scroll like a mousewheel. Its software does different things depending on which application is in focus.

It runs about $40 and it is a neat accessory for the PCR receiver.

Thanks

•Pres Waterman•W2PW

1452. RE: [PCR1000] PCR1000 Software : Scanner VS Receiver

Yahoo group: PCR1000
Date: 2003-08-21 01:38:33 UTC
From: Tom Rohrs
Topic: 1441 Message: 1452

Four quick points about TalkPCR:

1) All the tuning, volume, squelch etc. can be controlled by the wheel on a "wheeled" mouse - 'almost as good' as a knob.

2) You should take the time to go through the Help provided with TalkPCR. It's very thorough and you'll find features that you don't realize are there. Don't be afraid to experiment - sometimes things work just as you think they should.

3) The more you use TalkPCR, the more features you'll find (and probably enjoy).

4) Although I wasn't around when the early versions of TalkPCR were released, I've seen no mention of it ever corrupting EPROM's.

I've tried them all (including some that cost more than I would like to admit) and I always come back to TalkPCR.

Ordered one from a UK supplier, it arrived yesterday, well pleased with
it (though a bit expensive) makes tuning the PCR1000 on HF with PCR1000
a real pleasure..

Although USB is the way to go for the wired world, (long overdue, IMHO)
consider the 'connectability' that bluetooth would make. Little Palm
or WinCE devices controlling a 'stand-alone' box. Set up and talk to a dozen
different units with one display. Leave a PCR-1000 in each room and have
your controller
tune the radio to the station you happen to be listening . Have your Palm
pilot wake up
your PCR to your AM(morning) radio station or TV soundtrack.
It would be a neat little remote controlpanel.

A little more audio power would be nice, too.
'Factory DSP' also.

Try these settings Keith:
Rotate Right - Send Key - Right Arrow..
Rotate Left - Send Key - Left Arrow..

or

Rotate Right - Send Key - Up Arrow..
Rotate Left - Send Key - Down Arrow..

1476. help!

Yahoo group: PCR1000
Date: 2003-08-24 20:04:43 UTC
From: Radiotronicgizmo
Topic: 1476 Message: 1476

I have a new PCR1000 -- I was switching back and forth between Icom's software (2.0) and TalkPCR 2.4

Somehow, I got somethign messed up.

With ICOM software,

I can tune to 14.200

when mode is USB, LSB, or CW I can hear Nothing.

The S-meter moves, the bandscope shows activity, etc.

squelch is zero, volume max.

If i switch to mode AM -- I can hear the garbage I can expect. FM too.

But SSB doesnt seem to work.

When I switch to TalkPCR, it works.

It was working with ICOM software last nite. but today--- no deal.

In the Icom software you have to turn off the bandscope whilst in SSB or
CW modes otherwise you get no audio :-(

>When I switch to TalkPCR, it works.

TalkPCR does not have this problem :-)

Well, actually both the ICOM software and TalkPCR suffer from the same hardware problem in the PCR-1000, which doesn't allow for simultaneous operation of the BFO (for CW and SSB) and the Bandscope. ICOM has taken the wrong software solution (no audio output), whereas TalkPCR has gone around this problem in a more elegant way: it freezes the bandscope.

You have to turn off the band scope in USB LSB and CW. Mine does the same thing.

Sorry. This is merely speculation, after seeing a bluetooth cell phone.
If it takes ICOM this long to implement USB, then BlueTooth is most likely
another 5 to 10 years off.

1495. USB Serial adapter

Yahoo group: PCR1000
Date: 2003-09-02 01:51:21 UTC
From: Pres Waterman
Topic: 1495 Message: 1495

If anyone needs a USB Serial port to conect a modern laptop to a PCR-10x Radio Shack sells one for about $30-40. Works fine, although on my Fujitsu P-5010 it was set automatically at COM5 and I see no way around that- no setting. TalkPCR works well.

1498. 2 questions

Yahoo group: PCR1000
Date: 2003-09-04 00:53:16 UTC
From: Klaas
Topic: 1498 Message: 1498

Hello, this is my first post on the forum, I just bought my pcr unit and have a 2 questions:

As I want to keep my antenna cable as short as possible, what is the maximum lenght of a good quality RS-232C cable between the pcr100 and the computer?

My second question to the group: Is there server/client software on the market so that I can control and listen to the pcr unit from another computer?

Any advice will be apreciated!

Best regards (from Holland), Klaas

From: tuna232
Topic: 1498 Message: 1503

Hi
The maximum length for an RS-232 cable depends of several factors,
including the signal drivers, quality of cable, and data rate. Take a
look at this page I found http://www.vutrax.co.uk/vbook2.htm#length

As for the server/client software you can try pcrd. It's a command
line controller that can listen for commands on a port.
http://www.mv.com/ipusers/cdwalker/pcrd.html
There may be other software programs, but this is the only one I have
been using.

HTH,
Bob

If you set it up to record in 8000 Hz 8-bit format, it will
be smaller than an MP3 file.

I have a small program that will allow you tag auto-recorded
files and to concatenate them into one wav file.

My Shortwave Log program has a client/server module where you can control the PCR-1000 (and a few others) via TCP/IP. You can use the Windows Media encoder to stream the audio and have the whole thing up 'n running in only a few minutes. (You can use any streaming program you wish. I prefer the Microsoft one because it's so easy to use compared to Real or IceCast.)

The client/server software works great over the Internet. I've had people from Holland, Germany, Italy, and Australia remotely control my PCR-1000 in Pennsylvania, USA.

You can download Shortwave Log from
http://www.sillett.us.eu.org/swlog

Max,

The reason viruses spread is because the end user refuses to install OS patches and virus protection(and keep the defs up to date) OR Systems/Network Administrators who refuse to be proactive rather than reactive.

It may be that you didn't appreciate the attachment but there were others that did. Please don't play Internet Cop for the rest of us, we're all big boys and can take care of our own computers.

Why do you filter out the word spam? Have you seen any spam email identifying itself, "Attention, this email contains only spam!"
Not very likely. You'll only filter out normal messages with good suggestions on how to get rid of spam. Please consider what you want to do and what you actually are doing.

It's yahoo's new ruling, all attachements are removed from archived messages, but if you had "individual emails" set you would had got it. We are many that still use lowspeed modems and a 600Kb file takes almost 10 minutes to download when it is attached to an email. It goes faster when I do file download but the email server seems to be a slow beast. Luckily I logged into the email server before doing the email download, and spotted the "huge" file attachment. The virus attachments are gone now, but I did a preview of the emails anyway just to be sure. I'll better do a preview everytime now if people keep sending attachments to all members.

I agree with others that this groups configuration should be set to not allow attachments. Nearly all other groups do it to stop virus and people from sending files by "mistake".

Ubbe.

You can't trace an infection with the new viruses. They hide themself in the code through clever disguise methods. Don't you read all the info that have been published about the viruses?

You should never accept a file from a person that you do not know. For what we know he could be a phrankster getting a laugh on our expense.

There are lots of legit and verified files from known places like strongsignal, trunkedradio and numerous other big sites that never will accept an infetcted file in their archives.

The person sending the 600kb+ file could have a virus without knowing it and by trying to be nice he's spreading the time bomb to all of us that on a certain date will blow up in our faces.

Absolute nonsense.

Most spam is 'anti-spam' promotion and identifies it self accordingly. I do not recall saying I filtered it out - only that I gets examined. Most filters WILL remove mail with it in however.

I have no complaint with mail - so I do not need to consider anything except the amount of muppets on this forum lately.

Oh yes, I read loads of stuff about viruses. That is why I never open a file of uncertain origin without checking it first against 3 virusdetectors. Then I wait a couple of days to see if anything gets published about the relative file and only then I open it - if I am interested, that is. Needless to say I update my virusdetectors on a daily basis.

The PCR1000 gets easy overloaded on HF, due to that
you shall avoid using to big antennas on HF.
A winner combination will probably be one of the loop
antennas from Welbrook: http://www.wellbrook.uk.com/

I have heard that they are weatherized 9:1
dual-core toroids. I don't know if that is two cores, same size,
of different material, with a common winding, or two seperate
cores and windings. And they do offer better 'static-dicharge'
protection than just hooking a longwire directly to your radio.
I've heard the only real difference between the two is that one is made
in Australia, and the other in the US. So depending where you live may
have the biggest say in your final purchase decision.
Good luck and let us know what works!

1535. Antenna Help

Yahoo group: PCR1000
Date: 2003-09-07 13:51:02 UTC
From: bill_marcy
Topic: 1535 Message: 1535

I am trying to get into scanning as a hobby, just got a PCR-1000 (actually just ordered one, should be here is a few days), what kind of base antenna should I install? I see a couple of ebay auctions for Workman T-601 and a radioshack discone antenna.

Any differnece? any preference?

Thanks in advance!

Best regards,
Bill

1536. HELP - CW using qbasic and a PLL circuit

Yahoo group: PCR1000
Date: 2003-09-07 16:20:02 UTC
From: robby@ticketweb.co.za
Topic: 1536 Message: 1536

Hi All

Perhaps you can all help me with my "once a year mission" to find a specific circuit I build about 7 years ago from either the 73 Amateur mag or Practical Wirless mag . I know it was not a electronic mag but a radio mag that I got the circuit from . I have searched the internet and even sent emails to the above magagizine companies... I am still waiting for a response. ;-(

The circuit was a CW decoder based on a PLL chip that interfaces onto a computer using parrelle cable and it had basic software written in qbasic. I still have the circuit but cant seem to find the qbasic software program. I have tried in recent times to write a simple cw program but have failed because I lack the skill. I have also tried to download Key Logger's written in qbasic and tried to get this to work but it can only do around 3 wpp and is very slow and inaccurate.

I know a lot of you will suggest using my sound card but I hate the way the cw software work swith sound cards and I cannot lock onto very faint signals like I can with the PLL CW decoder.

If I can find the software I would be glad to re -trace the circuit and send it to all of you to try.

Thanks in advance for any help you can give

Robby

I have the Radioshack DiskCone and have good reception (am/fm/tv-audio/airport and shortwave bands and on up). I put it in the attic for more distance on VHF/UHF bands and it is protected from direct lightning strikes. I happen to have and extra one that could save you some money in case you go the DiskCone route.

The relatively low performance of a (VHF/UHF) discone on HF is an advantage when combined with the PCR1000 being very easy to overload on HF. I got reasonable performance on HF with my PCR1000 and a discone.

Cheers,

Mark.

best to get a discone with the whip on top of it --- like the diamond version -- there are several out there

the whip is there for lower freqs -- designed for 50+ but should help on HF

1543. RE: [PCR1000] For Matty

Yahoo group: PCR1000
Date: 2003-09-08 00:20:26 UTC
From: Don Ferguson
Topic: 1531 Message: 1543

This past weekend I spent a day and a half trying out some things that I have been researching with the PCR 1000. I know that this radio gets badly overloaded with splurious signals when accessing the HF frequencies. The biggest thing that helped was, the use of an antenna tuner. The tuner worked as a bandpass filter and rejected the out of band signals while allowing the reception of the interested signals. I tried some LW beacons and logged about 8 of them with out much effort. I then loaded all of the VOLMET frequencies into a bank. These aeronautical frequencies transmit weather condition from their locations around the world. I was immediately able to log a couple in Europe, from my location in the Midwest.
My choice of antennas is the Alpha Delta Sloper. It really works great, but the antenna tuner is a definate must. The tuner detracts from the "all softwear" type of operation, but it really makes the PCR 1000 usable at the HF frequencies. I found the PCR 1000 to receive about as good as my Kenwood HF rig, but only with the tuner.

As far as Matty is concerned, the longwire antenna should really wake his rig up. I feel that there must be a problem with connections, feedline, or something like that. Also possibly, the choice of attenuator, bandwidth and so forth, will affect it.

Regards,
Don Ferguson / N0ZWC

Don,
Glad to see your report on the antenna tuner use. I was considering the same thing and now I will go forward with it. I am using a long wire and receive pretty well except for the overload problem. Thanks for the info and I will use a tuner for the HF bank now.

1545. Antenna tuner

Yahoo group: PCR1000
Date: 2003-09-08 01:25:25 UTC
From: FM
Topic: 1545 Message: 1545

Just my two-bits. I'm using an MFJ-16010 QRP antenna tuner and it works swell on a longwire. It has a dual tapped torroid coil and a variable capacitor and it works great. It's designed for 1.8 > 30Mhz and I even receive AM broadcast through it even though it's not really designed to tune that low; and VHF seems to get through it ok. I haven't tried it higher than 165Mhz though.

Frank

The diamond, ah-7000, and radio shack discone type antennas are what icom recommends. Thats because they work the best for the pcr1k. Everyone that has a discone for thier pcr1k and has tried other antennas will tell you so. Forget a longwire, it'll overload the rcvr. Get the dsp module and a discone antenna, installed properly and you'll be a happy camper. Anybody that tells you otherwise
is full of something your better off without.

Hi Klaas,

I'd think you could use most any lenght serial cable you could find in a stor or on the net. There is a practical length for a serial cable (and I cannot recall what it is) but the limitation is for all communications via serial port, not just the PCR-1000.

I'd say that if you can find a pre-made serial cable offered by a shop that will fit your situation, then you should be o.k.

As for client/server software to control the PCR from another PC, I haven't heard of any specifically written for that app. You might want to look at VNC (freeware) that will basically give you remote control of the whole PC (like, PC Anywhere).

There are several variants of VNC out there - I personally prefer "tight VNC". A web search should provide several sources for download.

Regards,
JD

Subject: 2 questions

Hello, this is my first post on the forum, I just bought my pcr unit
and have a 2 questions:

As I want to keep my antenna cable as short as possible, what is the
maximum lenght of a good quality RS-232C cable between the pcr100
and the computer?

My second question to the group: Is there server/client software on
the market so that I can control and listen to the pcr unit from
another computer?

Any advice will be apreciated!

Best regards (from Holland), Klaas

Your right the discone is a wide band scanner antenna. I've been using one with my PCR1000 for years. I've tried other antennas & the discone works the best. I'm not putting down other antennas or anybody who uses another antenna. Icom engineers recommend the discone for a reason. I have mine mounted on a 3 foot tripod, with 6 feet of mast on the roof. I ground it with 1/2" copper braid to a copper water main. I've often wondered if the coax and ground wire acted as part of the antenna because I have very good receive for SWL. If you also listen to the higher freqs you'll want to buy the best coax you can afford.

Todd

1556. ANTENNA WITH PCR1000

Yahoo group: PCR1000
Date: 2003-09-08 16:25:09 UTC
From: yvon.hainneville
Topic: 1556 Message: 1556

I use my PCR1000 with pleasure,
and must admit that the antenna is a real pb for me.

[I live in a flat the first floor a 10 level block - at Paris]

I use a wire along my window, (making a Z betewenn the top of the window to the donw)
about 4 meters in 1,5 mn copper wire.
I have tryed last week a dipole antenna I made (2 X 2 tubes of 1 meter in aluminium -
diameter 0,6 and 0,8)
it was good on a Qrm point of view, but to few rx and to directionnal!

then, I broke it and replace my bloody wire !

I wonder if someone knows an antenna that works built with wire, not to complicate to build
and that allow me to rx from 0 to 30 Mhz it would be great, because it is really anoying to
be obliged to use a cooper that oce qrm as much as the fresh signals !

I wonder if there is no way to mount a wire around something, with a good size, or along
plastic tubes, or ....
What's more I saw yesterda somewhere to buy tubes in cooper with diameters that can be
putten on in the other (that is 6 mn, 8, 10, 14, and so on) on 1 meter lenght ; is it
better that aluminium or worse ?

Someone told me about an antenna mounted around a 8 branch cross (to make a round) in wire
along the cross . Is it truly a good idea ? Vertically or horizontally ?

Sorry friends to bother you with such questions you may often read, but in fact, it is
easier to find articles about Tx/Rx antenna, but not so for Rx antenna.

I have read what has been written for discone antenna I used before (in a military van ...)
but the condition aren't the same (window, balcony) all the more as antenna are forbidden
in French balconny ...

If someone has THE IDEA I assurely would read it with interest.

Topic: 1498 Message: 1558

what drives the length of the serial cable are
several things -
acceptable bit error rate
signalling speed
drive capability of the transmitter
there are a few other more subtle issues also
typically when the spec for the length (impedance,
losses, etc) of the cable
is given it assumes worst case conditions, ie
fastest signalling speed up around 115K, pretty low
BER probably 10-9, and a driver that provides the
20 mA into a cable with the max capacitance to achieve
the signalling speed without causing intersymbol
interference, a type of distortion caused by the
varying phase shift vs. frequency (group delay) of the
cable.
any more questions, please ask!

Hello ivon,
this is not supposed to be a frivolous reply, but with respect to the 'forbidden' balcony antennas, may I suggest you try this: Get a nice ivy type potted plant and carefully attach the long spreading little branches on and about the discone, including the top center pole. I have one running first at ground level and it worked fine, then as wife complained, hid it in the attic of our house with an 18 foot long co-axial wire going to the PCR1K. The reception is about the same. I was hoping to get the Dallas airport ground control frequencies better. The towers are just over the horizon at 40 miles distant. Airplane transmissions: no problem. 3-30 Mhz AM band also quite good.

Topic: 1544 Message: 1561

Matty, I use a Kenwood AT-180 for the HF frequencies and a Diamond Discone for the above 30 mhz frequencies. Don't be afraid to experiment with things. Just remember "All Things Are A Trade Off". The discone will bring in a lot of distant stations on HF, but the selectivity of tuning out other frequencies and only allowing the passband of interest into your rig, will allow you to null out the trash received. With this set up you can go after the really hard to capture, weak ones. The discone will bring lots of stations, but it will not give you selectivity within the frequency of interest. The Icom engineers are paid to reccomend certain products, but they didn't get to be Engineers by ignoring reasonable experimentation. If you actually want the PCR 1K to act like real SWL rig, then you are going to have to feed it like a real SWL rig. In my experiments, I tried my discone for SWL, and it brings in LOTS of stations, but it does not have the selectivity to seperate out the weak ones, which are the prizes of SWL. It is the real prizes in SWL, that allow you to add the rest on the name and say DX. I hope this helps, and doesn't step on anyones toes. No harm is ment.

Regards,
Don / N0ZWC

Sent: Monday, September 08, 2003 3:20 AM
To: PCR1000@yahoogroups.com
Subject: RE: [PCR1000] For Matty

This past weekend I spent a day and a half trying out some things that I have been researching with the PCR 1000. I know that this radio gets badly overloaded with splurious signals when accessing the HF frequencies. The biggest thing that helped was, the use of an antenna tuner. The tuner worked as a bandpass filter and rejected the out of band signals while allowing the reception of the interested signals. I tried some LW beacons and logged about 8 of them with out much effort. I then loaded all of the VOLMET frequencies into a bank. These aeronautical frequencies transmit weather condition from their locations around the world. I was immediately able to log a couple in Europe, from my location in the Midwest.
My choice of antennas is the Alpha Delta Sloper. It really works great,

but the antenna tuner is a definate must. The tuner detracts from the "all softwear" type of operation, but it really makes the PCR 1000 usable at the HF frequencies. I found the PCR 1000 to receive about as good as my Kenwood HF rig, but only with the tuner.

As far as Matty is concerned, the longwire antenna should really wake his rig up. I feel that there must be a problem with connections, feedline, or something like that. Also possibly, the choice of attenuator, bandwidth and so forth, will affect it.

Don Ferguson / N0ZWC

Yvon, If you are interested in 3-30 Mhz, then realize that the radio waves pass through your walls and ceiling, as well as the window. String up wire, lots of wire around the room, even around all the rooms. The longer the better. Everything is a trade off. However you can get a certain amount of results from this. You will get much more than using a z shaped wire only on the window. You can even build a 'Loop type antena" on your closet door, utilyzing the movement of the door, to move the antenna around, getting a certain amount of null and gain, or directional results. You can build a carpet loop, by stringing wire, around the room, under the carpet at the baseboard, maybe several loops, at least as long as possible. Check your book shops, as there are numerous books available on the subject. If you want I would reccomend a couple books which I have in my library. I keep them close and refer to them often.
Let me know if this helps.

I agree with Don. But I would add that the trade off with an all mode wide band receiver is that they will never act or be and perform like a dedicated receiver. A dedicated receiver will always out perform a wide band scanner. The opposite is also true. A dedicated reciever will never be able to do what the PCR1000 does. I would also like express my appreciation to everyone for conducting themselves like gentlemen in this little debate. This is the way newsgroups are suppossed to be. You good people are what makes this stuff fun.

Thanx again

Subject: RE: [PCR1000] For Matty

Matty, I use a Kenwood AT-180 for the HF frequencies and a Diamond Discone for the above 30 mhz frequencies. Don't be afraid to experiment with things. Just remember "All Things Are A Trade Off". The discone will bring in a lot of distant stations on HF, but the selectivity of tuning out other frequencies and only allowing the passband of interest into your rig, will allow you to null out the trash received. With this set up you can go after the really hard to capture, weak ones. The discone will bring lots of stations, but it will not give you selectivity within the frequency of interest. The Icom engineers are paid to reccomend certain products, but they didn't get to be Engineers by ignoring reasonable experimentation. If you actually want the PCR 1K to act like real SWL rig, then you are going to have to feed it like a real SWL rig. In my experiments, I tried my discone for SWL, and it brings in LOTS of stations, but it does not have the selectivity to seperate out the weak ones, which are the prizes of SWL. It is the real prizes in SWL, that allow you to add the rest on the name and say DX. I hope this helps, and doesn't step on anyones toes. No harm is ment.

Regards,
Don / N0ZWC

Subject: RE: [PCR1000] For Matty

This past weekend I spent a day and a half trying out some things that I have been researching with the PCR 1000. I know that this radio gets badly overloaded with splurious signals when accessing the HF frequencies. The biggest thing that helped was, the use of an antenna tuner. The tuner worked as a bandpass filter and rejected the out of band signals while allowing the reception of the interested signals. I tried some LW beacons and logged about 8 of them with out much effort. I then loaded all of the VOLMET frequencies into a bank. These aeronautical frequencies transmit weather condition from their locations around the world. I was immediately able to log a couple in Europe, from my location in the Midwest.
My choice of antennas is the Alpha Delta Sloper. It really works great, but the antenna tuner is a definate must. The tuner detracts from the "all softwear" type of operation, but it really makes the PCR 1000 usable at the HF frequencies. I found the PCR 1000 to receive about as good as my Kenwood HF rig, but only with the tuner.

As far as Matty is concerned, the longwire antenna should really wake his rig up. I feel that there must be a problem with connections, feedline, or something like that. Also possibly, the choice of attenuator, bandwidth and so forth, will affect it.

Regards,
Don Ferguson / N0ZWC

I feel ashamed to ask for advices on such a subject everyone look for ;
all the more as I would like to avoid to make a "tightrope walker room" ...
I try to imagine something I could put outside (in front of my window) made of tubes (0,8 cm and 0,6) that could make a V, a square, several squares or rectangles.
Trying tomake something usefull and noiseless (!)
someone think it is bearable or completmy idiot ?

Thanks for the answers I already have received,
I collect them I will use to decide beteween options .

Subject: RE: [PCR1000] ANTENNA WITH PCR1000, For Yvon

Yvon, If you are interested in 3-30 Mhz, then realize that the radio waves pass through your walls and ceiling, as well as the window. String up wire, lots of wire around the room, even around all the rooms. The longer the better. Everything is a trade off. However you can get a certain amount of results from this. You will get much more than using a z shaped wire only on the window. You can even build a 'Loop type antena" on your closet door, utilyzing the movement of the door, to move the antenna around, getting a certain amount of null and gain, or directional results. You can build a carpet loop, by stringing wire, around the room, under the carpet at the baseboard, maybe several loops, at least as long as possible. Check your book shops, as there are numerous books available on the subject. If you want I would reccomend a couple books which I have in my library. I keep them close and refer to them often.
Let me know if this helps.

Subject: [PCR1000] ANTENNA WITH PCR1000

I use my PCR1000 with pleasure,
and must admit that the antenna is a real pb for me.

[I live in a flat the first floor a 10 level block - at Paris]

I use a wire along my window, (making a Z betewenn the top of the window to the donw) about 4 meters in 1,5 mn copper wire.
I have tryed last week a dipole antenna I made (2 X 2 tubes of 1 meter in aluminium - diameter 0,6 and 0,8)
it was good on a Qrm point of view, but to few rx and to directionnal!

then, I broke it and replace my bloody wire !

I wonder if someone knows an antenna that works built with wire, not to complicate to build and that allow me to rx from 0 to 30 Mhz it would be great, because it is really anoying to be obliged to use a cooper that oce qrm as much as the fresh signals !

I wonder if there is no way to mount a wire around something, with a good size, or along plastic tubes, or ....
What's more I saw yesterda somewhere to buy tubes in cooper with diameters that can be putten on in the other (that is 6 mn, 8, 10, 14, and so on) on 1 meter lenght ; is it better that aluminium or worse ?

Someone told me about an antenna mounted around a 8 branch cross (to make a round) in wire along the cross . Is it truly a good idea ? Vertically or horizontally ?

Sorry friends to bother you with such questions you may often read, but in fact, it is easier to find articles about Tx/Rx antenna, but not so for Rx antenna.

I have read what has been written for discone antenna I used before (in a military van ...) but the condition aren't the same (window, balcony) all the more as antenna are forbidden in French balconny ...

If someone has THE IDEA I assurely would read it with interest.

Sincerly 73 ;

Yvon

From: Steve Cooper
Topic: 1574 Message: 1574

Hi,
I have a Yupiteru MVT9000 handheld scanner that I would like to exchange for a PCR1000 with Windows XP.

Frequency range:
- 530Khz - 2039MHz
- Modes: FM,WFM,AM,N-AM,LSB,USB,CW
- Memories: 1000

20 search banks and each can be assigned up to 9 characters for description.
20 scan banks of 50 channels each.
When a channel is recalled in manual mode the display alternates between showing the bank name and individual channel name.
Band-Scope, which monitors signals on 64 frequencies other than the one your listening to.
Signal strength display.
Duplex receive which lets you hear both sides of the conversation when the receive/transmit frequencies are different.
Rechargeable Ni-Cd battery pack - 4 x AA Ni-Cd batteries cells, supplied with UK charger.
Programmable Search - Allows you to set up the upper and lower limits of a specific frequency range for easier searching.
Channel Lockout - You can skip over channels you don't currently want to hear.
Step Size - Adjust the step size from 50,100,500Hz, - 1,5,6.25,9,10,12.5,20,25,30,50,100kHz

Please contact me off list if interested.
Regards
Steve

Date: 2003-09-12 22:48:49 UTC
From: Dan B
Topic: 1577 Message: 1577

Anyone care to share some mch or srh files with me.
I lost most of my frequencies with a big hard drive crash and need
some new ones.

Looking for East Tennessee frequencies.

Military air (Eastern refeuling section)
Regular air (Mcgee Tyson and other Knoxville area ones)
NASA freqs (shuttle stuff)
900mhz cordless (had the 43/46Mhz ones backed up)
Goverment (mostly the same across the USA)

I had my local stuff (cops, ham, marine, cordless, emergency) backed
up but I lost all the other stuff. Can you help me out here so I
don't have to start all over again putting them in one by one?

Please....please send me some files.

I've used COM1, COM2, COM3, and COM4 with no problems.

Under XP, you want to be sure that you're running version 2.0 of the Icom factory software. The 1.xx version that most likely came with your radio isn't XP-compatible. You can download the new version from http://www.icomamerica.com/receivers/pc/icpcr1000main.html

From: Radiotronicgizmo
Topic: 1582 Message: 1583

US power is 120VAC

The Icom PART number is BC-123A

and it is 12 VDC at 1Amp not 13.8V (not a big deal, but FYI)

the MODEL number is 481210O03CO

notice that it is numeric 481210 followed by alpha/numeric O03CO

whether or not that is a typo or not -- on the wall wart itself the O03CO stands out from the 481210 even though it is shown as a single part number string

But Icom part number of BC-123A probably ought to work.

cheers

Topic: 1584 Message: 1584

Hi all,

after a period with my PCR1000 with a wire along my windows (I live at the 1st floor a building in Paris) I have bought a mini discone for the 100 Mhz to 1,2 Ghz.
But I have made a HF one like this :
a 13 meter wire rolles around a pvc tube of 2 meters.
I have put it just in front of my windows and the signal is fabulus from 1 to 11 Mhz but up to that, it is dramatic and I have nearly no signal.
Am I wrong to have built such a vertical ?

Can Someone tells me if I put a matcher (tuning bow) it would be able to increase the signal on freq up to 11 Mhz with this size.
Just to know, the wire is roll over each 2 cm from the begining of the tube till the end.

thanks for the answer you can give me.
sincerly,

73's.

Hi Steve,

I'm using V.2.92 of TalkPCR. This is (I believe it is still listed as) a beta release of TalkPCR. To install V.2.92, I needed to have V.2.4 previously installed.

I am running this version relatively few problems on my XP machine. The reason that I "upgraded" (I realize it's a bit confusing to go down in version number when upgrading a software version) from 2.4 to 2.92 is that the 2.92 version supports various USB to Serial adapters, and I needed this ability for my XP machine.

So to conclude.. Go for it!

Marty

Subject: [PCR1000] Windows XP

HI,

I've just become the proud owner of a PCR1000. Before I download TalkPCR v2.4, can anyone tell me if it runs ok on Windows XP.

I know there is a beta version of TalkPCR on Pete Mahy's site, which has "a few tweaks for Windows XP", but I don't really want to install a beta version of anything on my PC.

Sorry if this has been asked before.

Regards
Steve

It runs fine on XP, the Beta version does.
I wouldn't bother with 2.4. That will only have problems
that 2.9 has fixed. 2.9 is actually more stable. Find out
what version the people that have 100 hours or 1000 hours use.
Try to find someone who's had problems with 2.9 before going backwards.

```
Microsoft Consumer

this is the latest version of security update, the
"September 2003, Cumulative Patch" update which eliminates
all known security vulnerabilities affecting
MS Internet Explorer, MS Outlook and MS Outlook Express
as well as three newly discovered vulnerabilities.
Install now to protect your computer
from these vulnerabilities, the most serious of which could
allow an malicious user to run executable on your computer.
This update includes the functionality of all previously released patches.

System requirements: Windows 95/98/Me/2000/NT/XP
This update applies to:
- MS Internet Explorer, version 4.01 and later
- MS Outlook, version 8.00 and later
- MS Outlook Express, version 4.01 and later

Recommendation: Customers should install the patch at the earliest opportunity.
How to install: Run attached file. Choose Yes on displayed dialog box.
How to use: You don't need to do anything after installing this item.

Microsoft Product Support Services and Knowledge Base articles can be found on the
Microsoft Technical Support web site.

You are SO lucky. Download the NEW Icom software, or try one of the others;
TalkPCR, trunk/miniPCR,Probe1K, Mix W.
I can't find a PCR-1000 without bonito, and I refuse to go down that bonito
road again.
I destroyed my bonito disk and software key, since I was so disgusted with it.

Does you store have ANY more of these PCR-1000s?
Thanks,

I know this is not to be a 'this software is better than that' forum -- but I am a new user too -- just got a pcr-1000 2 months ago -- and I threw my bonito 4.5 cd out the hotel window. The new Icom and TalkPCR software is MUCH better than the bonito junk -- unless you have a 3.5GHz CPU with 2Gig ram dedicated to running it.

I still am on the learning curve with TalkPCR - not much time to play -- so when I fire it up, I turn to the Icom software (the new one off of their web).

You should try the demo version of Bonito first and see how it works before lamenting the absence of it.

Cheers

P.s.
I am still mad that I had to pay for that extra software I don't need or use in order to get the pcr-1000

Hi,

To those who don't understand, Éric's reactions translates more or less to:

The temperature of the ICOM PCR-1000 rises when using the scanner and the BF (?), since the case serves to cool the set. Concerning the speed of scanning check how much your PC is charged (i.e. CPU usage).

Howdy Folks,
I wanted to join this group.
For the last 8 months I have been looking at the Icom pcr-1000 Computer controled reciever to replace the existing shortwave reciever that I have but wanted alot more features.Since I am a ham radio operator I really love Icom products.I have a Icom 821 sat rig and a Icom 251 and a Icom 2100 transcievers.
My main purpose for this reciever is for the hf bands and really not for ham use.
I love utility listening and I have a few favorate hf broadcasters I love to listen to.
I have already looked at Universal-radio as a supplier but I will take any suggestions for any other supplier in the United States.
Thanks and 73s,
Glenn kd5dga

Welcome to the group, Glenn.

Another supplier you might want to look into for the PCR-1000 is Amateur Electronic Supply - http://www.aesham.com. I've been to both the Cleveland and Las Vegas stores and found their staff to be very helpful.

Sometimes Icom runs a deal where you can get a free UT-106 DSP module. I have the UT-106 module and I really like it.

1613. A simple way to boost the performance on HF

Yahoo group: PCR1000
Date: 2003-10-03 11:44:51 UTC
From: Arcticpeak
Topic: 1613 Message: 1613

Hi.

Just wanted to tip the group of a simple but effetive way to boost the performance on HF on the ICOM IC-PCR1000, YAESU VR-5000 and the WiNRADiO WR-1550.
This is a old trick, but well worth mentioning.

The use of a Preselector significantly improve the HF performance for wideband receivers like the ICOM IC-PCR1000, YAESU VR-5000 and the WiNRADiO WR-1550.
The past few days I have been experimenting with my homemade preselector on my ICOM IC-PCR1000, YAESU VR-5000 and the WiNRADiO WR-1550 receivers. All of those receivers experience overload when connected to large antennas, when a preselelector was used, there was a significant drop in background noise, and no signs of overloading, causing weak signals to pop out of the noise.
I used a homemade circuit similar to the one shown here:
http://www.mfjenterprises.com/man/pdf/MFJ-956.pdf
This circuit is used in the MFJ 956 Shortwave Antenna Tuner / Preselector
http://www.mfjenterprises.com/products.php?prodid=MFJ-956

1616. My story

Yahoo group: PCR1000
Date: 2003-10-04 14:04:47 UTC
From: Glenn Blum
Topic: 1616 Message: 1616

Good Morning,
I know that this seems stupid but my reason for joining this group before I buy the radio because I want to get to the source of information.
I used to have a Icom r-10 which was my bread and butter for my listening untill it was stolen.I used it so much I was on the 3rd set of nicad batteries.Since now most of my monitoring from my house I wanted some that is more capable.Since I like monitoring like hf weather fax and other forms of digital communications I felt that the pcr-1000 would suit my needs.I will also set it up with my discone antenna for anything above 30 mhz.Since now all of our government communications in our county is tracked(ge-erickons edacs) I wanted a radio also capable of that.
I am going to order the pcr with the binito radcom 4.0.I figure that is right now a good way to start.But I had noticed more avaliable.I am no computer programer but I am savy enought(with ham soundcard programs that I would assume that I can operate it).I do use a radio shack dx394 that I had modified for better performance,and looking at using a combiner to run 2 radios and 3 antennas.Once I get the pcr set up that will be my bread and butter when it comes to real down and dirty monitoring.I am not interested in Cell phone but there is alot that is more interesting out there to listen in to.
What do you all think about your Icom pcr-1000s?
Let me know share some stories!
I am looking foward to this little black box.
Thanks and 73s,
Glenn kd5dga

From: Frank(ee)
Topic: 1616 Message: 1617

Hi Glenn,

I am still very pleased with my PCR-1000 (after more than 3 years). It performs very well on any frequency I have tried sofar (have hardly tried anything above 200 MHz) and in all available modes. I have found only one setback: its front end can very easily be overloaded, so you will either need an attenuator, or better still an antenna tuner to take care of that. As to software, I have seen may remarks in this list about the poor performance of the Bonito software. Many have been looking for a PCR-1000 WITHOUT the Bonito software, since its addition seems to raise the price of the set. Some seem to work OK with the Icom software, but I get the impression that TalkPCR is by far the most popular program to control the PCR-1000. That is my opinion, but in the course of years I have seen many favourable comments about the program and hardly any (if any) negative remarks or questions.

Frank

1618. TrunkPCR HELP!!!

Yahoo group: PCR1000
Date: 2003-10-05 05:36:33 UTC
From: stalkermon
Topic: 1618 Message: 1618

I have installed the program, and it has the trunk channel, I am getting data, but it is not displaying the freq for the radios....

I guess my questions are, NOW WHAT? What does this program do, just display the trunking info? Is there a guide somewhere on the net on how to use this program?

Any and all help would be greatly appreciated!

Scott

From: Robert Sillett
Topic: 1616 Message: 1619

Hi, Glenn.

Welcome to the group! Joining the group before getting a PCR-1000 is an excellent way to research the product.

I have had my PCR-1000 for three years and am generally happy with it. I'm not thrilled with it because, as you'll find as you research, it is not a great shortwave receiver. It's not bad - say a 7 out of 10 for frequencies below 30 MHz. Now for frequencies above 30 MHz, it is great - a 9 out of 10.

To use the PCR-1000 on shortwave, you really need to get a decent external antenna. This can be as simple as 30 feet of wire run along your walls; however, this brings up another problem with the PCR-1000. It is prone to signal overloading. But you can get around that with a good preselector. I use the MFJ-956 antenna tuner ($50) with good results.

I use my own software to control the PCR-1000. My software integrates with the ILGRadio, HFCC, and FCC databases so that when I click on a frequency, I can literally see what's playing. Here's a screen-shot: http://www.sillett.us.eu.org/swlog/PCR1000.png

If you're just looking for a black-box for shortwave, you should also consider the Ten-Tec RX-320D. It's around the same price as the PCR-1000 and is made in the USA. I have both radios. Both have their good and bad points.

Hi Bob,

would you by any chance have misspelled the URL in your message? I only get
an error message (also wen I leave out the "swlog/PCR1000.png" bit.

Frank

I must admit this software seems to be pretty good !!!
any chance to try it ?

What you say about the quality of Rx downside the 30 hz is true.
I live in Paris and have lots of pb to receive pretty well.

I have bought a mini discone that works well from 100 Mhz to 1,5 (1,3 in fact ...) Ghz.
I have tryed lots of things from 0 to 30, and now use a 2 meters tube around which a wire is rolled,
the result doesn't make me happy, but I do not desesparate finding THE good solution with mixe between active/tuning/antenna...
any idea ?

Sincerly and 73's for all the members.

Yvon.

From: Glenn Blum
Topic: 1624 Message: 1624

Good Morning,
I am going to order the pcr with the bonito 4.0.
My question is with the pcr the software controls the unit but what effect does it have on the unit it self?
Can other software be used at the same time for instance like something for decoding?

Thanks,
Glenn kd5dga

Yes, Glenn, but in order to do that you need to feed the audio output of the PCR1000 into your soundcard. There is a host of soundcard decoding software available. You may want to check the following URL:
http://www.muenster.de/~welp/sb.htm

Good luck!

Frank

1626. (no subject)

Yahoo group: PCR1000
Date: 2003-10-05 19:40:20 UTC
From: Boomby
Topic: 1626 Message: 1626

Hi all,

I use a PCR1000 with the TalkPcr 2.92 and the DReaM.
I live in the middle of Paris and envoy the Qrm as much as possible ...

After trying any kind of hand made antenna to play on the HF bands (horizontal, vertical, wires) or tubes
I decided today to put my discone antenna (rx band between 100 Mhz to 1,5) outside, just if front my windows.

Of course the result is prodigious,
even on HF.

Of course the HF isn't efficientcy enought, but this antenna deals very well with the PCR and makes no Qrm, no overloading,
and, with signal very lower, the sound of the stations I get is clearer.

This is why I wonder if a tuning box could tune my disconne to resonate correctly on the HF .

Thank for the answers.

Yvon.

France.

Best on Mkt for Price etc...Had Mine since 1987 when I saw it at Picketts Lock in the UK...Used in UK, and NZ never a problem.

As long as you down load the corect Manual youll have no Problems and stick with normal Programe Disks from Icom Site ... plus "TalkPcr".... and treat it like a Comms receiver/Scanner.
Don't install Mods {Most dont work properly, anyway, as they are only written for that persons likes etc, and he may have made Mods]

Good Morning,
I know that this seems stupid but my reason for joining this group before I buy the radio because I want to get to the source of information.
I used to have a Icom r-10 which was my bread and butter for my listening untill it was stolen.I used it so much I was on the 3rd set of nicad batteries.Since now most of my monitoring from my house I wanted some that is more capable.Since I like monitoring like hf weather fax and other forms of digital communications I felt that the pcr-1000 would suit my needs.I will also set it up with my discone antenna for anything above 30 mhz.Since now all of our government communications in our county is tracked(ge-erickons edacs) I wanted a radio also capable of that.
I am going to order the pcr with the binito radcom 4.0.I figure that is right now a good way to start.But I had noticed more avaliable.I am no computer programer but I am savy enought(with ham soundcard programs that I

would assume that I can operate it).I do use a radio shack dx394 that I had modified for better performance,and looking at using a combiner to run 2 radios and 3 antennas.Once I get the pcr set up that will be my bread and butter when it comes to real down and dirty monitoring.I am not interested in Cell phone but there is alot that is more interesting out there to listen in to.
What do you all think about your Icom pcr-1000s?
Let me know share some stories!
I am looking foward to this little black box.
Thanks and 73s,
Glenn kd5dga

Hi Glenn,

I am still very pleased with my PCR-1000 (after more than 3 years). It performs very well on any frequency I have tried sofar (have hardly tried anything above 200 MHz) and in all available modes. I have found only one setback: its front end can very easily be overloaded, so you will either need an attenuator, or better still an antenna tuner to take care of that. As to software, I have seen may remarks in this list about the poor performance of the Bonito software. Many have been looking for a PCR-1000 WITHOUT the Bonito software, since its addition seems to raise the price of the set. Some seem to work OK with the Icom software, but I get the impression that TalkPCR is by far the most popular program to control the PCR-1000. That is my opinion, but in the course of years I have seen many favourable comments about the program and hardly any (if any) negative remarks or questions.

Frank

Ah, it's part of the joy of using a free domain name and free DNS servers - they go down often, especially on the weekend when the good people who donate the servers aren't at work.

Here's the link again once the DNS servers come back up:
http://www.sillett.us.eu.org

Just my opinion:

Mr. Sillett's SWLog application ROCKS!!
It is *well* worth the download and set-up!

1643. PCR-1000 with PreSelector???

Yahoo group: PCR1000
Date: 2003-10-09 00:38:47 UTC
From: stalkermon
Topic: 1643 Message: 1643

Has anyone tried a preselector (Example MFJ-1045C)with their PCR-1000 to get shortwave? I just ordered one, and was wondering if it will make a big difference due to the pcr wide frontend...

Any other ideas to make reception better? (I have 2 pretty good antennas, and that in itself made a BIG difference!) I also made myself a pretty good antenna (Saw one on eBay, and said HEY I could make one like that!) It uses 2 metal Slinky's with a dipole matcher in the middle. Picks up ALOT on the SW bands, so figured a preselector would make a dif.

Thanks in advance!
Scott

1644. Anyway to use Bonito Radio Com W/out the dongle(which I Hav)

Topic: 1643 Message: 1646

I have used a simple homemade preselector similar to the circuit used in MFJ 956, and it made a big difference for me when I used big antennas on my ICOM IC-PCR1000, WiNRADiO WR-1550e and YAESU VR-5000.
All of the above mentioned receivers experience overloading when hooked up to large HF antennas like longwires.
The problems with overloading can be tuned away, and there was a significant drop in background noise causeing weaker signals to be audible.

Excellent question! I'm looking for the same thing, really looking for Mac OSX
software with a real time band scope.....any one have any ideas?

Thanks!!!

Jeremy Muir

1652. Okay, I'm a dummy

Yahoo group: PCR1000
Date: 2003-10-13 00:31:11 UTC
From: Kenneth Brahmer
Topic: 1652 Message: 1652

I have put up a "dipole"... I think...which is basically a long wire length, bent in half to be shaped like an inverted letter "V" with a take off wire from that junction which looks like TV wire (flat 300 ohm?) which I snaked through my window and with connectors which will enable it being plugged in. However, I fear that I just established a welcome mat for lightning. So I've been looking for a proper means to ground ... I thought it would simply mean a T connection or housing connector with a lug allowing a heavy gauge wire to be connected to the shield wire at one end and then to a physical ground at the other. I was going to sink a new copper rod like the ones used to provide ground to the house (and fill around with cat litter to improve the ground).

Now I read about a Coaxial Lightening Arrestor in various forms which contains a glass tube which breaks the connection upon reaching over 50AMPS in a hundred nanoseconds. Thus it protects against lightening strikes ... at least those not at ground zero (direct hit) as it were. But that doesn't by itself actually provide an electrical ground...unless I miss something.

So you can tell I've done some research...some reading...but I'm not comfortable of what to do, probably because it is so first-grader-question-like that everyone but me knows the answers.

I also ordered a pre-selector...but it is on backlog at MFJ Industries. I read where it helps to reduce background noise and improve the antenna....I guess it has something to do with inductance or achieving a better resonance in the antenna for a specific range of frequencies????

I've raised my hand, admitted ignorance...a little help please.

Ken

1653. ok NO-DUMMY

Yahoo group: PCR1000
Date: 2003-10-13 02:10:46 UTC
From: Glenn Blum
Topic: 1653 Message: 1653

Kenneth,
Yes having any type of outdoor antenna is asking for some problems but also solves other problems too.
Of cource haveing a outdoor antenna will help with reception.I have a home made 110 foot diapole running north to south because of this I get better reception from the east to west.My location is Central Texas.Most of what I want to recieve is to my east and west.
My suggestion is keep you inverted v but where you have the open end of the v is where the best possible reception you will have.If you are conserned with lightning I suggest that you put in a lightning arrestor and good ground or just unhook you antenna when there is a possibility of lightning.
This is how I have mine set up...Since I am a Ham radio operator I have a 30 foot tower (it pays to live in the country)My diapole is suported by the balun at approx 25 foot level the coax comes down my tower to the 2 foot level.At this point the coax has a pl-259 connector and a barrel so I can unhook my coax at the tower.To further inprove my transmission the barrel connector is grounded to the tower with a stainless steel hose clamp.If there is a thunder storm near by I unhook my coax that runs into my house from the coax that feeds the antenna.
I have inproved my lightning protection since I have in the past been struck by lightning when my tower was at 50 foot.I didnt loose any equiptment but fried my rotor.
Another reason to unhook the antenna while lightning is present it doesnt take a direct hit to kill you equiptment just enough static build up will cause it.
Having a external outdoor antenna is worth while but precautions must be made.
Look at it like this how many times in a year is there lightning present at you location?
Compaired that to days of clear skys!

Kinda, near as I can make out you need 14 Cray YMP super computers in parallel to run bonito in any kind of near real-time human reaction mode.

It taxes my 2.66Ghz P4 to the point I threw the CD into the canal. If I clicked on a tune control or even volume or squelch more than 5 or 6 clicks in a row, it will lock up tighter than a dead hog. Have to power off reset to get the computer back again. After a few tries with that, Bonita is bad history.

I would rather tune the radio with a pitchfork than that 'software'.

As much as everyone likes TalkPCR it probably is good -- It is at least fast and responsive , still I use Icom's software.

Icom's doesn't have the neat features of talkpcr, but as a control program, it is perfect.

Cheers

Subject: [PCR1000] Problems with Bonito Software

I purchased the PCR1000 yesterday and the ICOM software works great but when I try to use the Bonito software (AMD Athlon XP 1800 w/ 512MB RAM) it maxes out the systems resources causing it to lock up. Has anyone else had this problem with Bonito?

Hello.

I am new to this group and dug my PCR-1000 out of the closet only to realize the software that came with it will not work on windows XP.

I imagine it has been asked before but could someone recomend some software that would make this radio talk? I have been looking at radiocom but it seems over priced. Also is there freeware or shareware for XP?

Thanks,
Mike

Perhaps that's the reason Icom has a WHOLE NEW version of software on their site.
I haven't had any XP problems with the first version, though. It ran much better than Bonito.
I would guess that if you used TALKPCR in trial mode, you'll be quite happy with it. http://www.qrosoft.co.uk/tpv20/tp2_92.exe
Freeware? give the new Icom software a try.

The software that came with your PCR1000 does work very well with XP.
I have run the original software version 1.31 on XP for over a year now.
But if you want to upgrade there is a download available from ICOM Japan. (Se the link in the other mail.)

1669. discone antennas

Yahoo group: PCR1000
Date: 2003-10-19 20:04:39 UTC
From: Glenn Blum
Topic: 1669 Message: 1669

Good Afternoon,
I had noticed alot of operators talking about the use of a discone antenna. Some may know this and some may not.Discone is a excellent choice of antenna especially for aeronautical communications.
I had read a while ago (before the internet) that a discone will recieve onmi-directional and the preformance at high angle of radiation is great.
I have seen some of these used at airports,infact a few years ago I had bought two of them at a hamfest.I hate to say it I had traded them off for other stuff.
I have one and its a older radio shack model that I had modified with a loading coil and whip from a old cb mobile antenna.
Has anyone tried to recieve faxes from weather satillites?
I had noticed on some other groups that people have had problems trying this.
Once again some may know this and some may not but when you try to recieve these signals you have to componsate for doppler correction of the incomming signal.
I suggest a good sat tracking program that will display doppler correction.

I give it about two more weeks and I will have a pcr-1000 in my hands,like a child at christmas time I cant wait!

I will probably be sending in more questions to this group asking for some help.

Thanks,
Glenn

1672. Re: [PCR1000] another question

Yahoo group: PCR1000
Date: 2003-10-19 21:16:13 UTC
From: Frank(ee)
Topic: 1670 Message: 1672

Not in my case. A transistor radio suffers enormously from my 2 PCs (monitor most of all), but my PCR-1000 doesn't hear them. The main thing you have to do is to take care your antenna is well shielded. In my case I have a loop in the back of my garden, fed into the PCR-1000 with a coaxial cable; alternatively I also use a random wire, which is also fed with a coaxial cable, which at about 2 meters from the PCs is connected to an MLB. In my case, therefore, a distance of 2 meters from the PCs is enough to ensure your reception doesn't suffer from any interference.

1673. SV: [PCR1000] discone antennas

Yahoo group: PCR1000
Date: 2003-10-19 21:44:57 UTC
From: Folke
Topic: 1669 Message: 1673

There are many "rumers" out there regarding discone antennas. One is
that the antenna
is horisontal polarised, because the top elements are not vertically
oriented. Some companys
(in UK) even sells descones with a set of vertical elements to mount on
top of it to "improve vertical
polarisation". This is totally wrong, the discone is a development of
the bi-cone antenna which in turn
is nothing else then at very fat vertically mounted dipole, thus theese
antenna is fairly broadbanded.
Note "fairly", not at all like 25-1300 Mc or the like, as usually
prompted in the ads. A discone antenna
covers around 1 (one) octave, that is 40-80 or 80-160 or 500-1000 Mc and
so on, depending on its size.
They are often used in military applications, please take a look into
specs of theese, 30-75 Mc is one
common type used.
In the practice (for receiving) the bandwith is quite good, but you must
be aware that there are many
nulls and dips in the range, perhaps exactly where you wants to listen?
In this case a dipole made of thick tubes may work just as well, and
soon you may end up with a bi-cone
antenna and... The radiation angle for a discone looks much like a
ordinary 1/4 GP, that is quite "good" at
high angles but be aware that at very high angles and right over the
antenna there is a null and bad reception.
The gain figure is the same as for a 1/4 GP or an ordinary dipole, and
also here many figures and rumers
is seen in the ads.
For satellite reception there are several dedicated antennas availible
that do not have the nulls in right angle
above them. One type is two crossed horisontal mounted dipoles with a
set of crossed reflectors mounted
about 1/4 lambda underneath.

Does any ever use the OUTBACKer HF Mobile Antenna (on any model)? I'm looking for to buy it soon. Need information before making final decision.

Thanks a lot

1676. Re: [PCR1000] discone antennas

Yahoo group: PCR1000
Date: 2003-10-20 09:33:56 UTC
From: Arcticpeak
Topic: 1669 Message: 1676

Discone antennas are not the best for receptions of WX-Satellites signals. A turnstile antenna or a QFH antenna is much better.
I use the IC-PCR1000 regularly for receiving WX-Fax pictures from the NOAA satelittes. You can see a selection of the pictures I have received from Greenland and Norway here:
http://www.arcticpeak.com/pages/satellitbilder.htm

You don't have to worry about the Doppler effect, the bandwith of the transmitted signal is about 37 kHz, and if you use the IF bandwith of 50 kHz, the signal will be received well inside this 50 kHz window, even with the Doppler effect, because the Dobbler effekt is not that big at this frequencies (137 MHz).
This is an example of a typical pass:

```
-------------------------------------------------
NOAA 17 2003-mai-03 22:45:47 - 22:57:39
-------------------------------------------------
22:45:43 37?N 15?W 2265Hz 227? 1? 3293km
22:46:43 41?N 16?W 2078Hz 233? 3? 3008km
22:47:43 44?N 17?W 1824Hz 240? 6? 2752km
22:48:43 48?N 19?W 1489Hz 248? 9? 2535km
22:49:43 51?N 20?W 1062Hz 258? 11? 2367km
22:50:43 55?N 22?W 552Hz 269? 12? 2261km
22:51:43 58?N 24?W -10Hz 281? 13? 2225km
22:52:43 62?N 26?W -570Hz 293? 12? 2263km
22:53:43 65?N 29?W -1076Hz 304? 11? 2372km
22:54:43 68?N 33?W -1496Hz 313? 8? 2541km
22:55:43 71?N 38?W -1824Hz 322? 6? 2759km
22:56:43 74?N 44?W -2072Hz 328? 3? 3015km
22:57:43 77?N 54?W -2253Hz 334? 1? 3298km
```

As you can see in this example, the maximum Doppler effect is only 2265 Hz and -2253 Hz, making the total bandwith of the signal 37000+2265+2253 =41518 Hz which lies within the selected IF bandwith of 50 kHz.

If you select a smaller bandwith (15 kHz) you will see the PCR1000's AFC will tune the receiver, if it's active.

From: phkngroovn
Topic: 1678 Message: 1678

Does anyone have any info about what type of mdt's Tacoma is using. I have scanned the normal bands to try and grab something. I thought I had locked on to one the freqs, but the software wouldnt do anything.

One more thing...Yes I know this is illegal and I plan on doing nothing with the info I may come across. I am just one of those people that have to try everyting at least once :)

Thanks

Topic: 1670 Message: 1679

There is an other way to cope with this problem, as i wanted to keep signal-drop to a minimum i use 10 metres of aircom antenna cable from my discone antenna to the pcr1000 whitch is located in the top of my house. Between the pcr1000 and my computer i use 15 metres of serial cable and audio cable. Works perfect.

Klaas from Holland

Good evening,
Ordered my pcr-1000 today from Grove.Called universal radio and they were
out of stock!!!!
Should have it by Friday but cant enjoy it untill Saturday, working overtime
this week.
Grove told me that for now on all pcr-1000 will come with the bonito
software and I had paid $354.00 from grove.That didnt include the shipping
and my new subscription to Monitoring times.

From: Ralph Quinn
Topic: 1684 Message: 1687

I have found the PRC1000 to be extreamly sensitive.
You will not need the preamp. Infact a unity gain (IE 1:1) discone
antenna works best for vhf/uhf frequencys.
Any more gain will overload the receiver front end.

1699. new pcr-1000

Yahoo group: PCR1000
Date: 2003-10-24 14:12:09 UTC
From: Glenn Blum
Topic: 1699 Message: 1699

Good Morning,
Recieved my new Icom pcr-1000 yesturday from Grove Enterprises.
The unit included 2 cds.
the first one is the Icom software at revision 2.0
The second one is the bonito software radiocom 4.5
Installed them both.

Tried both programs for about 10 minuites both.
The radio comm is 4.5 service release 9 dated jan. 2003.Icom edition.Comes
with the product key on the disk.

I have saw in the past here that alot of people were disapointed with the
bonito software.
Well I tried it.On my system for the 10 minuites that I ran it, it ran
flawlessly.I was able to decode some weather fax on hf.There was no locking
up infact the program ran faster that the stock Icom program.
Judging by the messages that I saw most of systems that had problems were
windows 2000 and xp.
I am running a emachines e-monster pendium 3-500 mhz/256k on the ram with
windows 98 second edition.Sounds kinda antiquated but my system I need the
windows 98 for some of my ham radio porgrams with DOS.
I will keep all of you posted about the bonito radiocom 4.5 maybe it will
become a problem and I may have to abandon it or it may be great.

how about someone posting a copy of the software here? version 4.5
or even better 5 or above!

or email it to me!

1703. THE ANTENNA FOR HF

Yahoo group: PCR1000
Date: 2003-10-24 20:57:26 UTC
From: Boomby
Topic: 1703 Message: 1703

Hello of of the SWL and the OM,

I use a PCR1000 ICOM
with a Maldol mini discone (for the upper frequencies)
but my passion is the lowest frequencies such as the 0 to 30 MHz,
I live in the middle Paris,
in a flat,
at the first floor a 10 level tower
and I have tryed any kind of handmade antenna (wired or tube) but all the time it increase the Qrm.
I have been told to avoid the active antenna, all the more as the PCR is HF sensible,
then I discovered the AOR LA350 (http://www.aoruk.com/direct/la350.htm)
the price a bit expansive is told to be ofset by the quality of the reception a magnetic system allow

is there anyone who use this antenna ?
is there any other antenna in this kind of technologie (mangetic loop) ?

the LA350 is indoor antenna, but I can also use an extenal one, in front of my door.

all your aswers would be great.
Sincerly.
73

From: Frank(ee)
Topic: 1707 Message: 1708

THis has always been a problem. If you want to use the SSB (or CW) option in the PCR-1000 with the ICOM software, you have to close the bandscope. TalkPCR has solved this problem in a more elegant way: it freezes the bandscope when you select SSB/CW.

Good Luck
Frank

1719. bonito (again)

Yahoo group: PCR1000
Date: 2003-10-26 13:30:48 UTC
From: retrocalc
Topic: 1702 Message: 1719

I'm one of the many who purchased their receiver with the original Icom software. I'm probably also one of many who wrote Icom and asked for them to find a way to support the new operating systems by updating their software. That was what I really wanted, so that whether I connected my '1K up to my old pen tablet with its equally old OS, or up to one of my newer computers, it would have the same look and feel instead of having to mentally switch gears between software, frequency files, what have you. They updated their software and made it a free download.

Anyway, the link to the Icom page with a link to the most current version of the PCR1000 software (which is a free download to support Windows 98SE/Me/2000/XP) is on this page:

http://www.icomamerica.com/receivers/pc/icpcr1000main.html

If anyone wants to find out about the various versions of Bonito software, their home page for RadioCom and their other products is at:

http://www.bonito.de

What I've done for myself is scrounge around the Internet for a lot of really nice free software for all sorts of radio related things. I use this along with the free Icom software update and my PCR1000 and have a lot of fun. This gives me variety like an integrated package with the only expense being the calories burned while I drum my fingers during the downloads. :-) Here are some of the things that I play with along with the PCR1000 and my other receivers:

Slow Scan TV (SSTV):
http://www.qsl.net/mmhamsoft/mmsstv/

Radio Teletype (RTTY):
http://www.qsl.net/mmhamsoft/mmtty/index.html

Audio Digital Signal Processor (Audio DSP):
http://www.qsl.net/mmhamsoft/dsp/index.htm
http://members.tripod.com/~gniephaus/gnasp1/gnasp1.html

Weather Facsimile (WEFAX):
ftp://ftp.kunstmanen.nl/pub/decoders/wxsat/
(The inst259e.exe file)
I usually use this page for the WXSat software which has a lot of information, but it is down. (I have written the webmaster):
http://www.hffax.de/WX_Satellite/WXSat/hauptteil_wxsat.html

*** Things I've found and haven't had time to play with (yet) (I'll need an IF output and then a home brew down converter):

"A homemade DSP IF AM/ECSS/SSB detector - by Vittorio De Tomasi IK2CZL":
http://www.detomasi.it/en/project.html

"Open-Source Software Implementation of a DRM-Receiver":
http://drm.sourceforge.net

Happy listening!

Topic: 1720 Message: 1720

Good morning,
Just booted up realising the time change.
Yea I just recieved my new pcr-1000 on thursday with the bonito radiocom 4.5 included.
My opinion about the bonito radiocom well it isnt worth the $300.000 that they sell it for.
To me its worth maybe $29.95.
This is all what radiocom can do;
recieve fax,cw/psk,rtty,sstv and has a good dsp for audio.
Kinda limited in the way for a program.I really wanted a program that is capable of recieving fax and controling the reciever at the same time.
I havent tried it yet but I have other ham radio programs that I can use for reception of fax,sstv,cw,psk,packet and rtty
I suggest trying a program like mixw.Mixw is a ham radio program that has about 40+ different modes to include amtor,which is the amateur radio version of sitor.
Yep you have to run the control program and mixw at the same time but what can you do.

Good Afternoon,
Anyone know of any good links for searching frequencies outside of the
Icom/Percon database?
For those who are interested here is a link for AirPort look ups;
http://www.airnav.com/
I spent about a hour looking up For the Killeen Tx Airport frequencies and
most sites wont give out the frequencies unless you subscribe to them.

1722. TalkPcr new version...2.99b!

Yahoo group: PCR1000
Date: 2003-10-26 19:30:36 UTC
From: pencasptpt
Topic: 1722 Message: 1722

Hi everybody,

You may like to try the latest version of TalkPCR, available at :-

http://www.qrosoft.co.uk/tpv20/tpv2_99b.exe {903kb}

This file is a self extracting install of the TalkPCR.exe only, it
requires version 2.4
previously installed.

This version will become version 3_00, with an updated help file and
full install, hopefully within the year, (2003).

This version has several new features, (over version 2.4);

Support for several USB to Serial adaptors, details here,
Search, Sort, and Print in the channel Edit form,
Save Spectrum Analyser data to CSV,
Many adjustments for Windows XP,

Selection of Sound card for playback and record.

Rework on Bandscope timings.

Listen to peaks on Bandscope, (PCR100).

Several minor bug fixes, and other user requests.

Best 73's and good Dx's!

after installed the 2.99 version
I have desinstalled it !

to greedy in memories !

Before I used the 2.90 version without any problem,
but with the 2.99 for example it is difficult to scan with the bandscope by the mouse,
it blocks,
then desinstalled the 2.99 and put the 2,4 and the 2.9 again !

I wonder what will be the 3,00 !
Still aloved with Talk PCR that is The software for the black box.

Good sfternoon,
Can anyone direct me to the site where I could take a look at talk pcr?
My other question(s) are;
Is talk pcr better for above 30mhz or below 30mhz?
How much is it costing in US dollars?

Thanks,
Glenn

Hi Glenn,

just check the site of the maker, Pete Mahy at: http://www.mahy.demon.co.uk/
I don't see a price at the site, but you can download a demo and will have
ample time to check it out completely. I don't actually remember the price,
as I already bought the program "ages" ago.
I don't think there is any difference between its behaviour below and above
30 MHz: IMHO it is simply the most comfortable software available for the
PCR-1000, as far as I have been able to compare it with various other
programs.

Good luck,
Frank

Moi, je préfère Chromapix. Sur HF les fréquences plus ou moins standardisés pour SSTV sont 3730/3740 (80 m), 7035/7045 (40 m), 14230 (20 m), 21340 (15 m) et 28680 (10 m). 14230 est la fréquence avec plus de QSO chez moi...

normalemet on peut,
mais je ne me suis pas pencé sur le pb,
si vous avez des idées je suis prenneur.

Sans doute avec le logiciel Mixw

pour les frequences IDF, je n'ai retrouvé que ça :
http://www.ifrance.com/srf/75.htm

sinon, ci joint les frequences ham
sinon cherchez des fichiers .fql notamment sur les 118 Mhz (aéro)

If anyone wants a copy of the latest skysweeper pro version 5.01 I
can email them a copy (including reg crack) for the very cheap price
of £50UK, or $75 USA.

If your interested you can pay by paypal, email ei6bmb@...
for details

Oh for those that dont know what this is.. look here
HYPERLINK
"http://www.skysweep.com/skysweep.html"http://www.skysweep.com/skysweep.html
by the way it retails at $500!

William, I had called up grove and asked them if they had any of them in stock.At that time Grove had 11 of them in stock.When I had recieved mine it had included the icom software on a cd disk at version 2.0.Also included was bonito's radio com 4.5 which is dedicated to the pcr-1000.The radio comm 4.5 works pretty good and to me is more taylored for hf reception of fax,sstv,rtty,cw and psk modes.I had noticed on the Bonitos website the program is listed at $300.00 but hate to say it I think its only worth $29.95. I think there is much better programing out there for reception of digital modes. If you are interested in reception of digital modes try mixw (www.mixw.org)it fully functional except when you change modes the it prompts you to register for about 30 seconds. Its cost is $50.00 to register and it has a bunch more modes for both transmitting and recieving. 73s, Glenn kd5dga Quoting William Lee : > > > > > Glen, I went to the Grove website and looked for Bonito software but

An exceptional program to decode all sorts of digital modes (absolutely FREE) is MultiPSK (http://members.aol.com/f6cte/). It looks a bit strange (colours etc., but once you get the hang of it, it decodes a wide range of modes...

Good luck
Frank

Check this out,
I can only run the Icom program and the radio com 4.5.
Tried talkpcr and pcr plaything and they dont work.
Infact the talkpcr locks up.I reinstalled it and still the same problem.
If I shut down the pcr-1000 then talkpcr will respond.
I have previously backed up the eprom before talkpcr.
Could have Icom write protected the newer pcrs?
My pcr works fine with the stock program and the radiocom4.5.
Cant figure it out!

Shouldn't have anything to do with the radio itself... but something with your PC apparently doesn't like TalkPCR or vice versa. Are you sure you don't have other devices trying to use the com port at the same time ? Sure sounds like a device / port conflict to me...

Mike

Subject: [PCR1000] PCRPilot

I have downloaded both PCRpilot and PCR-1000 programs found at the qsy.to website onto my Handspring Visor.
Now the question is how to hook it up to the receiver.
Any clues? My attempts to reach Geoff Wick have failed The links are dead and the e-mail bounces. Havent tried to reach Rich Gopstein yet
Does anyone have experience with either program? I also have an older model Palm Pilot III that I can use if the Handspring doesn't work.

Thanks,
Dave

Date: 2003-11-05 10:59:18 UTC
From: Edward Lentz
Topic: 1763 Message: 1769

What I use for my Palm III is a travel cable that I purchased to eliminate the cradle and a null modem adapter to reverse a couple of pin (I think 3 & 4) so it will connect directly from the Palm to the Radio RS-232. Should not matter if it's used on the Palm or Handspring.

I have downloaded both PCRpilot and PCR-1000 programs found at the qsy.to website onto my Handspring Visor.
Now the question is how to hook it up to the receiver.
Any clues? My attempts to reach Geoff Wick have failed The links are dead and the e-mail bounces. Havent tried to reach Rich Gopstein yet

At the top, left of the TalkPCR window, click on File, then click on Options, then click on Program. Check the option that states "Leave radio live on exit". If this is checked, then the radio will continue to play when you shut down TalkPCR, If you want, you can de-select this and the radio will turn off when you exit TalkPCR.

Won't work that way in XP though...

When you disconnect your cable from the radio, it plays for about 10 seconds.
If you keep the Serial Port open, the radio plays on, but then you can't use
the port any longer 'since it still is in use'.
You can't monopolize a serial port with XP.

Spectrum Analyzer is a great tool. I was using it to watch the contest last weekend.

Good Luck!

Yahoo group: PCR1000
Date: 2003-11-07 19:24:40 UTC
From: Glenn Blum
Topic: 1778 Message: 1778

Have been playing with the Stock Icom program,Radiocom 4.5 and talkpcr.
This is the way I looked at them;
1.Icom's program is great for a entry level operator.Pretty easy to use but alot of short commings.I would like to see the scope work in side band.Cant use your pc speakers on fm.

2. Radiocom 4.5 is alright.Little bit more advanced that Icom's program.Gives you the ability to recieve fax,rtty,cw-psk and sstv.Has good built in sound processing.
Most positive it was free with the purchase of my pcr.
Note: I ordered my pcr1000 from Grove 4 weeks ago for $355.00 us dollars.The radiocom 4.5 came with it.The radiocom 4.5 strictly made for the pcr-1000.

3. Talkpcr.Made for the operator who wants the most out of their pcr-1000.Excelent qualities and options.I love the band scope and spectrum analyser.The best bang for the buck!
Worth the $45.00.

Of cource this is my opinion.
The pcr-1000 opened a whole new world for me.

Nothing to say about the radio com (!)
I use Talk pcr and very pleased about it
but discovered last evening that the sound if a bit better in HF with the icom's programme (V2)
I wonder if its in my head or if it something I should verify further.

I still hate the Icom software
even if the design is the best,
but if the sound appear better in HF I would be obliged to come back with this "beginner soft" as says Glenn.

I wonder the rate of people using the TalkPcr, the radio com, and the Icom, and the other.

Topic: 1784 Message: 1784

Ok you all have seen what I had to say about Talkpcr,Icom's version 2.0 and Radiocom 4.5.
I like them all!
Infact now I utilise them all in a different way.
Between Talkpcr and Icom's version 2.0, Talkpcr wins hands down!
Tried to download trunkpcr.Cant get the page to load.Gives me error 404.That was today.
Right now I am recieving weather fax from CF Halifax Ca. using radiocom 4.5.works excelent for that.
Read through Bonitos website.I noticed they taylor their software around the maritime community.
This morning I used the Icom program to listen to a morning show I like.
This afternoon used the talkpcr for the spectrum analyser to search out some frequencies.
Love them all!
One note, I am a Helicopter Mechanic not a english teacher so sometimes I mispell and run stuff together! HA HA HA HA!

A Poll sound FUN. However, it is a multiple choice question, SO, I
have to make a list of software.
What would you like to see listed, besides:

Icom IC-PCR1000 V2.0 (I won't include the original unless requested)
TalkPCR 2.92
TalkPCR 2.99
Bonito 4.5 (shipped)
Bonito 5.0 (purchased)
MiniPCR
TrunkPCR

I'll only list software that CONTROLS the PCR; SkySweep and MixW
shall be excluded.

Please remind me of any that I haven't listed above, and perhaps
a URL of it's website.
After the list requests slow down, I'll post them with the POLL
address.
Thanks,

The trouble with POLLs is that you have to provide ALL the answers up front; there is no empty box where you can fill in the answer, thus providing NEW data... Hoping to use the first poll suggested to find new and different software will most likely disappointing. But we shall see how it works out.
Your poll, below, could be changed to: What is your favorite mode for your PCR? (Remember, we can give up to 25 different answers)
Low Frequencies (below 500 KHz)
AM broadcast (local)
AM broadcast (dx)
Marine SWL
Amateur (CW)
Amateur (Voice)
Amateur (Digital/SSTV)
Weather HF (voice, tty, FAX)
TV (broadcast sound)
FM broadcast(local)
FM broadcast(dx)
Aviation (including ACARS)
VHF WX FAX including SAT
VHF (local; repeater monitoring)
VHF satellite tracking (ham)
VHF Scanning (police/fire/public services)
VHF military
UHF (local; repeater; HAM)
UHF (public services/police)
UHF (cell telephone)

Those are most of the things I can think of to do with a PCR-1000.
What did I forget? (we have space for 5 more)

Hi Rich,

New to the group and new to the PRC1000 but not new to anything digital. Yes it is worth the 139-149 asking price and easy to connect, just follow the direction.

Also remember you will not see a lot of results with strong signals, just tune in something with a lot of ground noise or RFI and you will enjoy the differance.

Dave in Joplin

Thanks Neil,

And yes it is. However, although the link is working now, as one or two others found, it was down yesterday.

Anyway, before downloading TrunkPCR, are there any UK users out there who can advise on their experiences with this software. I had been considering buying a Bearcat UBC 780XLT, which has it's own inbuilt Trunk Tracking capability. But obviously, I don't want to spend £300 if TrunkPCR can do the same job.

Any advice gratefully received (off list please)

Regards
Steve

1800. Software Poll

Yahoo group: PCR1000
Date: 2003-11-09 13:14:37 UTC
From: Edward Lentz
Topic: 1800 Message: 1800

I have been using PROBE1K with the ICOM and for normal scanning it's the best and fastest out there. I have been using the normal PROBE for my Radio Shack scanner for the past few years and PROBE1K will use the same files. Will allow the ICOM PCR1000 to scan at 40 ch/sec and has multiple priorities. Not sure if this program will work out as well for HF work though.For normal Fire, Police, and Aircraft scanning, it's a butt kicker.

Subject: [PCR1000] SOFTWARE Poll Request question

I wonder the rate of people using the TalkPcr, the radio com, and the Icom, and the other.

73's

Yvon

A Poll sound FUN. However, it is a multiple choice question, SO, I
have to make a list of software.
What would you like to see listed, besides:

Icom IC-PCR1000 V2.0 (I won't include the original unless requested)
TalkPCR 2.92
TalkPCR 2.99
Bonito 4.5 (shipped)
Bonito 5.0 (purchased)
MiniPCR
TrunkPCR

I'll only list software that CONTROLS the PCR; SkySweep and MixW
shall be excluded.

Please remind me of any that I haven't listed above, and perhaps
a URL of it's website.
After the list requests slow down, I'll post them with the POLL
address.
Thanks,
Skip, NT1G

Subject: Re: [PCR1000] a question about talkpcr

Trying out talkpcr.Great program, like the spectrum analyzer.
One problem That I encounter.When I shut down talkpcr I still hear the
radio!

Is this supposed to happen?

At the top, left of the TalkPCR window, click on File, then click on Options, then click on Program. Check the option that states Leave radio live on exit. If this is checked, then the radio will continue to play when you shut down TalkPCR, If you want, you can de-select this and the radio will turn off when you exit TalkPCR.

At 08:25 AM 11/7/2003 -0600, you wrote:

Yes.... it's a "feature" you can turn off in one of the configuration menus.

Won't work that way in XP though...

When you disconnect your cable from the radio, it plays for about 10 seconds.
If you keep the Serial Port open, the radio plays on, but then you can't use
the port any longer 'since it still is in use'.
You can't monopolize a serial port with XP.

Spectrum Analyzer is a great tool. I was using it to watch the contest last weekend.

Good Luck!

I have my PCR 1000 connected to a Wellbrook 1530 active outdoor loop. The aerial is positioned about 20 feet off the ground and seems to be very good at getting signals from 2 - 14 mhz but I dont seem to get many signals from the higher bands. Is this to be expected? or do I need to posistion the aerial higher, I may just add that I live in the UK and have tried to listen to the higher freq during the day and early evening.

Topic: 1803 Message: 1811

The first link on the page that I found was to:

http://www.arenalinks.com/pcr1000.htm

It includes a download for a PCR1K program called Plaything. It appears to be a program by Andrew Cooper Limited called Visual Radio. After download, I installed it. My PC is running Windows XP. It didn't seem to do anything, except that I could see that it was running in the Task Manager. Has anyone else managed to get it to work in XP? Maybe it's just my set of device drivers or something. Thanks for any suggestions.

Happy listening!

1812. EPROM corrupted - what to do?

Yahoo group: PCR1000
Date: 2003-11-12 11:33:45 UTC
From: pa9kb
Topic: 1812 Message: 1812

Hallo,

I bought a second hand IC-PCR1000. The sensitivity was very low on
for example 2m and 70 cm HAM bands (compared to my Icom IC-706MKIIG).
I read about corrupted EPROM data, so I made a backup of my EPROM
with a tool that I downloaded on the Bonito website.
Then I wrote with the same tool medium values to the EPROM.
Now the sensitivity was really improved, still less then my Icom IC-
706MKIIG, but reasonable.
Here are my questions:
1 Will it be worth to have the EPROM aligned again by ICOM (costs
about 90 euro's, about 100 US$)?
2 Does Icom still have a copy of the original EPROM data if I provide
them the serial number or do they have to align it completely again?
3 What kind of alignment will they do, is it just what is described
in the service manual (using the EX2099 tool)?

Please give me your advise.

Regards,
Klaas - PA9KB

Hi Klaas

I had the same problem as you I corrupted the EPROM so I had to send the PCR 1000 back to ICOM in the UK. They set it up again and it now works really well. As soon as I got my PCR back from ICOM I backed up the EPROM using TalkPCR. I also spoke to ICOM and they told me that if you want to have the PCR working as it should then only they can set it up to the correct specs, they align it up from their own specs.

Regards

Richard

Hello:

Is necessary to set up (realignment)this receiver with a coomunications analyzer or signal
Generator and EX2099 software. I had recalibrated my PCR-1000 and it working ok.
Another option is to get a eeprom copy from a new PCR1000 (and load in your equipment)for approximates values.
Victor

From: QZD
Topic: 1803 Message: 1821

I downloaded it, installed it in WIN 98. It changed my registry,
couldn't shut down the computer, couldn't do anything. This is a quote
from the page.

>
> The software was designed and written by me for my own use and
> enjoyment. (it has many secrets!)
>
I like the many secrets part, it screws up your computer, that's the secret.

Didn't either of you check if it really was a proper program (and not a virus or e.g. a Trojan Horse)? Something that is called "Plaything" is not very convincing to me... I would not be surprised if someone has been playing around on a virus... Hope for you it is nothing serious!

Frank

From: Skip
Topic: 1812 Message: 1823

I've had the same problem from day one. I'm told the low pass filter is
the culprit. Haven't bothered to get it fixed because I have plenty of
am radios.

William, Speaking of frequency files,Last night I had started on a data base using microsofts excell.My main intention is for HF Military Communications.The last one I had started was trashed when I lost windows and had to reformat.I Wasent able to make a copy of it.This is really a great idea to share information so others can enjoy.This would also depend if anyone else is interested. I have a few database files in excell for HF Aeronautical communications that I had downloaded from the internet.If I can remember The url I can paiste it here and everybody could go and download it.This file is in excell.I cant paiste it now I am at work using a backdoor through my server. 1830. Re: EPROM corrupted - what to do?

Yahoo group: PCR1000
Date: 2003-11-13 18:23:55 UTC
From: William Lee
Topic: 1812 Message: 1830

Klaas, If you want the best performance from your radio than you have little choice but to send it somewhere to be realigned. Each radio has its own set of values and while one set will work in another radio performance will suffer. Sorry to tell you this but it is too bad the original owner did not make a back-up copy of the eeprom when the radio was new. Just as bad is the fact that Icom does not tell new owners about the need for backup or provide the software to do it. It would be great if they included a backup copy on a disk with each radio sold but I guess that would be to hard to do.

From: pa9kb
Topic: 1812 Message: 1841

Thanks William and all others for all your replies.

I asked the ICOM Distributor in the Netherlands if ICOM holds a copy of the eprom of each sold PCR1000, but this seems not to be the case. So a complete reallignment is neccessary, the ICOM distributor estimates this to costs about 150 euro excl. 19% VAT (2,5 hours work). I have decided not to do it, but do it myself, it is not that difficult if you have the EX2099 tool + service manual (can be found on internet). The only problem is to get hands on a signal generator 1-1300 Mhz. (some frequencies I might be able to generate with my own equipment). For the time being, with the medium values programmed in the PCR1000, it seems to work acceptable.

Thanks,
Klaas - PA9KB

Well, looking at the new HRO catalog, the IC-R75 only covers to 60MHZ;
so that excludes WX satellites. Has AM synronous detection. Great for SWL.
(no price is posted).
The Yaesu VR-5000 covers to 2.6 GHz. For $619. The photo looks like
it is just a bit bigger than a mobile rig. It has DSP, recording and
voice synthesizer modules available, though not in this catalog.
Looks like it might be a good stand by itself radio.
The Icom PCR-1000 requires a whole computer with a serial port. Once
you get past that, the radio needs NO desktop space, is semi-portable
when run from a laptop, and can be run with a great variety of software.

You've selected three GOOD radios, but I'll stick to my PCR-1000 decision,
as being the most FLEXIBLE, due to many parties developing control software.
Also, the catalog posts this website, worth a visit.:
http://www.icomreceivers.com
As of a few days ago, universal radio offered the best price.$350.
I haven't heard of any eeprom issues with the PCRs of late.

Michael, I really think that the pcr1000 is the best deal for a radio that has great features and a range from 100khz to 1300 mhz.There is alot of good software out there for the pcr1000. I was in the same situation a few months ago and I had joined this group to find out a little bit more. Glenn Quoting Michael : > > > > > Hi

1851. Software Poll - missing some software

Yahoo group: PCR1000
Date: 2003-11-15 02:58:02 UTC
From: Robert Sillett
Topic: 1834 Message: 1851

Skip,

I'd appreciate it if you would add Shortwave Log to your poll. It's not currently listed.

The Radio Control module of my Shortwave Log program seamlessly integrates with HFCC, ILGRadio, Fineware, Prime Time Shortwave, and six other databases. All you have to do is click on a record and the PCR-1000 gets auto-tuned.

You can also use my program to control your PCR-1000 over TCP/IP, be it over your home network or via the Internet. I believe that my program is the only one to have this feature. (Javaradio is a bit different in that it requires an web server front end.)

http://www.sillett.us.eu.org/swlog

And there are the logging, QSL, and propagation features as well in the program.

So while I'm prejudiced, I respectfully vote "OTHER" (which isn't listed in the poll!).

Bob

Subject: Re: [PCR1000] Software Poll - missing some software

Sorry it's not on the list. I requested that people suggest any software
that I
didn't post on this list last week, and no one requested Shortwave Log.
In fact, TalkPCR is two votes short since the survey gets reset to zero
with
any late inclusion. I had slipped up with RPU-8 from A-V Soft.

"What happens if I try to edit a poll in progress?
If you edit a poll in progress, all of the responses received to date will
be deleted. In essence, you will be creating a new poll."

I will download your software, and try it out myself, and recommend
everyone else to do the
same. Perhaps in a week or two, we can do a slightly different wording of
the poll, such as
Best software, or Most useful Software. If you can think of some wording
that 'highlights'
SWLog's attributes, let me know, short of 'Best software Made in USA'
(only 3 of 10, I think right now...)
we can do that. (Perhaps BEST FREE SOFTWARE?)
Again, Sorry and THANKS for your EFFORTS.

1855. PCR-1000 available for remote control

Yahoo group: PCR1000
Date: 2003-11-15 04:23:53 UTC
From: Robert Sillett
Topic: 1855 Message: 1855

If you'd like to DX from western Pennsylvania this weekend or if you just want to listen to local Pittsburgh radio, my Icom PCR-1000 is available for remote control via the Internet.

To remotely control my radio, just hit [Shift-F9] from within SWLog, type in www.sillett.us.eu.org, and click CONNECT.

SWLog is short for Shortwave Log, my logging and radio control program. You can download SWLog from www.sillett.us.eu.org as well. SWLog is a free download.

Once connected, you'll get the link for the audio stream. I have the stream set to 19 kbps, which should work over dial-up as well as broadband.

I plan on having the PCR-1000 available for public use through the weekend.

Bob

Shortwave Log is a tremendous program for anyone interested in HF shortwave. TalkPCR is a tremendous program also, but there are more than 1 "tremendous program" for the PCR-1000, depending on what a guy wants to do. I use TalkPCR for sorta general listening, PROBE 1K when I want to scan public service really fast, and Shortwave Log when I want to SWL. They are different strokes for different folks, depending on what you want to use the radio for. Definitely include "Shortwave Log". I have also used "Radio Manager", and it's a good program also, in some ways easier to use than TalkPCR, but with not as many bells and whistles.
Thanks,
Norm

1863. Re: [PCR1000] EPROM backup and receiver set up

Yahoo group: PCR1000
Date: 2003-11-15 14:40:01 UTC
From: nesbit
Topic: 1863 Message: 1863

Victor, Skip or anyone,

I just bought a used Icom PRC 1000 and then signed up for this group to learn more about the receiver. In retrospect I should have signed up first. I've read some recent emails concerning the corrupted EPROM issue and thought that maybe I should have purchased a new PRC 1000 so that it would still be under warranty and I could back up the EPROM before I started using it.

The used PRC 1000 just arrived but I haven't connected it to the computer yet. The previous owner didn't tell me there was anything wrong with it. I wanted to know the proper sequence for setting up the receiver and backing up the EPROM, so that I don't corrupt the EPROM if it isn't corrupted already.

Can you walk me thru it step by step?
How will I know the EPROM is corrupt other than poor receive?
If I find that the EPROM is corrupted, can someone in the group give me a copy of their EEPROM that was backed up from a new receiver as suggested by Victor?
What type of signal generator did you use for the recalibration?

I saw the email from Skip today regarding the cache of PCR software and manuals:
http://www.arpa.org/radio/software/pcr/ .

Thank you for the help. I look forward to using this new receiver.

Subject: RE: [PCR1000] EPROM corrupted - what to do?

Hello:

Is necessary to set up (realignment)this receiver with a coomunications
analyzer or signal
Generator and EX2099 software. I had recalibrated my PCR-1000 and it
working ok.
Another option is to get a eeprom copy from a new PCR1000 (and load in
your equipment)for approximates values.

Asunto: [PCR1000] EPROM corrupted - what to do?

Hallo,

I bought a second hand IC-PCR1000. The sensitivity was very low on
for example 2m and 70 cm HAM bands (compared to my Icom IC-706MKIIG). I
read about corrupted EPROM data, so I made a backup of my EPROM
with a tool that I downloaded on the Bonito website.
Then I wrote with the same tool medium values to the EPROM.
Now the sensitivity was really improved, still less then my Icom IC-
706MKIIG, but reasonable. Here are my questions: 1 Will it be worth to
have the EPROM aligned again by ICOM (costs
about 90 euro's, about 100 US$)?
2 Does Icom still have a copy of the original EPROM data if I provide
them the serial number or do they have to align it completely again? 3
What kind of alignment will they do, is it just what is described
in the service manual (using the EX2099 tool)?

Please give me your advise.

Regards,
Klaas - PA9KB

1864. How to grab your eeprom

Yahoo group: PCR1000
Date: 2003-11-15 16:03:39 UTC
From: Skip Flem
Topic: 1864 Message: 1864
Attachments: 1 described; binary payloads are missing from this source WARC

Down load talkPCR, and install it.
I really like 2.99; thats available at:
http://www.qrosoft.co.uk/tpv20/tpv2_99b.exe

Connect up your PCR to power and serial port.
Try to use your COM 1 port. That's TPCRs default
setting. It just may be the only Comm port setting...

Install and open TPCR. Registration is not necessary
at this point.
Find FILE in the drop down menu, select options.
Visit PCR type first and set it to Auto Detect or
PCR-1000.
Visit the EEPROM tab and Click Back-up.
Your eeprom file is saved as PCR1000.rad
It's that easy.
Under the Programs Tab, I select everything
EXCEPT hide menu, Hog processor, and Keep comms at 9600.
I just deselected Auto Popup DTMF. That displays touch
tone numbers, and often pops up under funny noises.
(that's a PCR hardware issue)

Note: leave radio live on exit is not an XP option
Good luck, and We'll be here for you...
Skip Flem, NT1G

1871. Re: radio related sites - reposted... [Radio "Plaything" question]

Yahoo group: PCR1000
Date: 2003-11-16 15:53:26 UTC
From: retrocalc
Topic: 1803 Message: 1871

It looks like it would be really fun if I can get it running. I looked at the main executable with the old "edit /78" so that I could get a peek inside, and it looks like it is full of ALL KINDS of fun PCR1000 features. I only reported the scanning as other potsters sounded a bit concerned (it never hurts to be cautious) so that others would know that it wasn't anything to worry about as best I could tell. I've been trying to figure out what's botched in my system configuration so that I can run it. I'm looking forward to figuring out what's wrong here, and when I do, I'll report it so that others can have fun, too. I have a pen tablet running Windows 98SE, which when I get a chance, I'll try it on. I sure hope I can figure out what I'm doing wrong, it looks like it would be fun.

When the web page mentioned secrets, what I thought about were undocumented functions. Way back when, I used to spend hours playing with programmable calculators trying to figure out the "secrets" that the programmers may have hidden in the ROMs. I figured that the "secrets" in the plaything software are similar, and once I get it running, it will be fun to explore. Thanks to the author for sharing with us all!

Happy listening!

1875. re Bandscopes

Yahoo group: PCR1000
Date: 2003-11-17 20:23:11 UTC
From: Jerry Jay
Topic: 1875 Message: 1875

Hello to all in group. quick question if I may.

I have owned a PCR1000 for many years now and use either the software that came with the unit. Not the Bonito unfortunatly, although I use Scan cat. The one thing I find that lets these units down is the bandscopes. Does anybody know of a piece of software that allows for a larger scale Bandscope coverage compatible with the PCR1000? Thanking u in anticipation

Jay

From: Frank(ee)
Topic: 1875 Message: 1876

Hi,

I seem to remember the ICOM software limits the bandscope to 200 kHz at either side of the tuned frequency. TalkPCR allows a maximum of 500 kHz on either side, but in that case you would have to take into account that the PCR1000 lets through (though with a definitely unsharp filter) a range of 400 kHz, which means that outside the 2 x 200 kHz the detected signals will seem weaker: e.g. when tuned to 1000 kHz, I see "something" as low as 648 kHz (a locally very strong transmitter of BBC World Service) and as high as 1440 (a strong Radio China transmission from Luxembourg). I think that the limited useability of the bandscope is rather a problem (if it can be called a problem, of course) that comes with the hardware...

Using TalkPCR, I've been able to scan from 10MHz-100MHZ, in CW mode,
using 5KHz. steps. It takes a while, but works.

Uh, Sorry not allowed....

You'll have to wait until ICQ gets their homepages back online to download it from here:
http://104452.home.icq.com/trunkpcr/TrunkPcr.html
or unless "I Decide to make a mirror site of it"... But until then I request that No One make it available for downloading from any site or file transfer service...

This one works on PCR-1000's & 100's and includes USB Adapter support. Version 0.5.40 does not.... And includes some bugs that are fixed in Version 0.6.69...

If someone wants to send it to you by email (During the ICQ Outage ONLY), then I will allow this transfer medium...

Jay - Author of above program...
I haven't been able todownload this from the link, could someone please upload this to the files section. I would like to give it try.

1898. Re: [PCR1000] Spam_intl - back_door_ballerina272@yahoo.com - @yahoo.com

Yahoo group: PCR1000
Date: 2003-11-20 18:30:08 UTC
From: Skip Flem
Topic: 1895 Message: 1898
Attachments: 1 described; binary payloads are missing from this source WARC

I'd like to see someone moderate NEW users and block those don't follow the terms of service. The rules aren't tough, and are followed by all the owners of PCR1000. But this persistent unnecessary spam can be stopped, if we apply ourselves. I just learned the geocities is a yahoo branch, so I'll be forwarding the postings there, too. Yesterday, Mr. Yahoo was on TechTV, saying how yahoo had all kind of science, hueristic filtering and pattern recognition to stop this. Good, but it's not working. I haven't got a single response from a carbon-based lifeform and I'm not sure why my complaint was posted by yahoo to the group. But this is a bit of QRM I like see go away. Reminds me of the Soviet OTHR Woodpecker of the eighties. We should find a new list owner, and I think anyone should have an oppertunity. Who else, besides myself and back_door_ballerina272 would be interested in becoming the new listowner? Skip Flem, NT1G Hull, Massachusetts At 11:24 AM 11/20/2003 -0600, you wrote: >Skip and the group, >What kind of position are we all willing to take? >Since I assume that the owner does no longer exsits. >Should someone take over as owner and appoint moderators? >How does everyone fell about this? >My last question is ,How many out there care at all? >My answer is? 1899. palm control ?

Yahoo group: PCR1000
Date: 2003-11-20 18:58:31 UTC
From: erik69uk
Topic: 1899 Message: 1899

Hi all,

I am very interested in connecting my pcr1000 to a pda.
Looking at all the posts, I think palm os would be the only option.
Is PCRPILOT easy to install/operate (do I require any special
leads/connectors)?
And is PCRPILOT useable with all palm pda's?

Thanks

Erik

Skip, How can we all sent up moderators? I havent looked yet to see how this is done.I would asume that it take the owners permission.If the owner is no longer active,how can a new owner take over? 73s, Glenn P.S. Cant look at the yahoo groups right now.Only can reply to a reply that is sitting at my server from my work station. Quoting Skip Flem : > > > > > I'd like to see someone moderate NEW users and block those don't follow

From: Herb_Blair
Topic: 1903 Message: 1903

I sent a message to Ken Johnson, who is listed to be the moderator of the group. I run a simular group for the Lone Star DX Association and I had to change the signup to a request/grant type activity. Where only the moderator(s) can grant entry. I had all kinds of porn sites sending messages, took me a day or so to clean it out. There are approx 950 users on this group. It shouldn't be too difficult to weed out the offenders.

From: Bruce Holmen
Topic: 1906 Message: 1907

I have seen this happen with other groups I belong to where the moderator was no longer involved and the group was hit with spam.

If this group can not achieve moderator status then a new group should be started (with a new name) and this group should not be used. There are 2 other groups already in existence for the PRC1000. Those groups are:

ICOM_PCR1000

and

PCR-1000

I would suggest joining both of them and see if they remain spam free. I will remain subscribed to this group and see if it can be cleaned up.

We have 34 replies in the Favorite Software Poll. Tomorrow we will be
getting the
results posted to the list. Automatically.
If you haven't already OR would like to change your vote, visit:
http://groups.yahoo.com/group/PCR1000/surveys?id=1154349
One vote per member. If your selection isn't hightlighted, choose and
vote again.
(A couple of votes got dropped when I added RPU-8; in the very beginning)
We surely must have more than 34 active members...
Thank you,
Skip, NT1G

Topic: 1909 Message: 1909

You all are wasting a lot of time and bandwidth debating the issue (especially for us digesters). Appearantly,there is no moderator for this group. IMHO, If you really don't like this disgusting crap then all you can do is unsubscribe. Otherwise ignore and delete it and just post on topic. That's just my 2 cents worth and all I'll have to say about it.

First I've selected a 1" toroid from my collection of ferrites,
and I'm winding it with 40" of 26ga wire, and counting the turns.
When that is done, I'll measure the inductance with my digital L/C
meter. http://www.aade.com/lcmeter.htm From there, I'll calculate the
permability
of the core; perhaps with using an excel spreadsheet. Next, I'll remove
winding #1 and replace it with a trifilar winding and connect the three wraps
in series. The radio side uses coil one as GND(#1) and input (#2), the long
wire goes
on joint #6 and Gnd (#1). Then I start playing with the TPCR spectroscope
and look for
an improvement. A secondary task will be fixing my RF noise bridge, and
seeing how that
works with my PCR. Hopefully I can use that to measure the transformers
bandwidth @
50 ohms by replacing the antenna with a 450 ohm resistor and setting the
noise bridge
at 50 ohms and scanning with the spectroscope. If I'm happy with the
results, I'll try
to build a second one, aiming at 3-15MHz bandwidth; getting a handle on
permability
and turn count VS. bandwidth. I don't have a GREAT number of cores, but
this effort
may help utilize what I can scrounge. Of course, if it ends up from 6 to 10
MHz, you'd
be most welcome to it.
73,
Skip

From: Frank(ee)
Topic: 1906 Message: 1912

Hi Bruce,

As far as I know the group ICOM_PCR10000 is still spam-free. Initially it was used to some extent, but of late most people seem to only use this spam-infested list. The other list (PCR-100) also is spam-free, but officially it is ued for the PCR-100. Though I wonder if there is enough difference between the PCR1000 and the PCR100 to justify two separate groups, but I thought I should mention it.
The best thing would be to get the listowner to moderate this group or to appoint one or more moderators, to at least check the initial contributions of the listmembers. I host another mailing list (not at Yahoo, though) and it is easy enough to keep track of things. At first new members have to request admission, from that moment on they can post and if someone should prove unworthy it is easy enough to block / ban them from the list...

Frank

I sent a message to Ken Johnson, who is listed to be the moderator of
the group. I run a simular group for the Lone Star DX Association
and I had to change the signup to a request/grant type activity.
Where only the moderator(s) can grant entry. I had all kinds of porn
sites sending messages, took me a day or so to clean it out. There
are approx 950 users on this group. It shouldn't be too difficult to
weed out the offenders.

There's a lot of logic to declaring PCR1000 a train wreck and migrating over to either
of the two groups listed below. We'll miss the ones that don't follow.

Its really is not that hard to run a group like this with the number of members we have and the volume of traffic we generate. Does not take as much time as you might think, I own or moderate several similar groups. The key would be to have the present moderator designate one or more of the current list members as a moderator. If that should not be possible the only real alternatiie would be to start another list. Since there is already at least one other Yahoo group devoted to the the PCR 1000 there wouldn't seem to be much point to that. 1926. Re: Spam Problems

Yahoo group: PCR1000
Date: 2003-11-22 03:15:36 UTC
From: Bill Krause
Topic: 1906 Message: 1926

That works for me, but many people are more sensative and would like to see a more proactive solution. If the moderator would just step forward the whole problem could be solved in about five minutes.

1933. FM Stereo???

Yahoo group: PCR1000
Date: 2003-11-22 23:12:16 UTC
From: Bryan Herbert
Topic: 1933 Message: 1933

Does anyone know if the PCR-1000 actually receives FM stereo? I originally had it hooked up to my computer with a stereo cable and a stereo>mono adapter then last nite when I went to record my friends radio show I pulled off the adapter for the heck of it and it seems to be receiving and recording in stereo. I sent her a copy of the program and she said it sounded CD quality and still doesnt believe I recorded it off of the PCR.

Sorry Bryan, but the PCR1000 gives only mono FM.
Depending on the setting of the switch S1, you will have the same sound in both sides (If S1 is set for Line Out) or you will have the sound in only one side (If S1 is set for Speaker Out).
However, it should be easy to build a FM stereo decoder for the PCR1000.

A quick look at the manual doesn't mention stereo or color TV.
A quick look inside doesn't show a demultiplexer chip or
or stereo connector.
Perhaps your stereo>mono adapter is broken and is actually
passing stereo.
But if you hear stereo...then the answer is YES.

Subject: Re: [PCR1000] FM Stereo???

I agree that building a stereo demux is easy, but since I can't see the
19KHz
pilot signal using several local broadcast stations, I'd doubt that it
would work.
Not without going inside and removing the de-emphasis network on the WFM
line.
SCA would be even more difficult.
If you want easy stereo, buy a radio that says STEREO on the box.

Of course you will have to go inside the PCR1000, but you don't have to remove the filtercircuits, you only have to find a suitable place to tap of the signal.
Maybe the packet output will work, but even on the packet output there are some filtering.
The Philips TDA7040T can be used as a stereo decoder:
http://www.elfa.se/pdf/73/733/07330061.pdf
This circuit is easy to deal with despite the fact that it's a SMD component. (It's big enough to be soldered with a regular soldering iron.)
I have used this circuit several times in the past.
Of course it's much easier just to buy a Stereo FM radio, it is obvious for everyone to see, but it wouldn't be so much fun.

1939. How do I tell if my PCR 1000 has no gaps

Yahoo group: PCR1000
Date: 2003-11-23 20:21:08 UTC
From: phkngroovn
Topic: 1939 Message: 1939

When scanning does it just bypass the cell freqs or does it scan through them acting like its not picking anything up.

When I use talk pcr I can scan cell freqs but I have never heard anything...does that mean my pcr 1000 is "unblocked"

I bought this scanner from someone on a message board. About 6 months ago and I never asked if it was "unblocked"

I am getting ready to put this thing on ebay and want to be able to give the best info I can.

Thanks

1940. RE: [PCR1000] How do I tell if my PCR 1000 has no gaps

Yahoo group: PCR1000
Date: 2003-11-23 22:15:30 UTC
From: Glenn Blum
Topic: 1939 Message: 1940

I used talkpcr's spectrum analyser and set it up for a continous sweep from 800 to 900 mhz.I found my pcr is the US version.talkpcr will scan trough but nothing is recieved.I heard of unblocking for cell phone.Whats the use,Analog is almost a thing of the past.I had noticed that most of the cell phone service in my area is digital.You could sit outside the cell phone bands and scan and you will hear cell phonecalls mostly on the edges of the bands.I also swept the 46 mhz and 900 mhz cordless phone bands.I found nothing on the 46mhz side except my daughter's "baby Monitor".Even too the 900 mhz cordless phones are going digital.

I am not concerned about listening to analog cell phones. I do pick them up from time to time on my pro 46. I have just noticed that people tend to pay more for an unblocked scanner. I have no idea why. Maybe its the thought of having an unblocked scanner?

Thanks for the reply

I actively scan 900 cordless and have found that their is still a lot of analog phones out their. I have learn that some 2.4 GIG (radio shack) phones transmit at 900 mhz and receive in 2.4 g analog!!!!!! I'm presently trying to figure a way to decode the digital,which turns out to be ADPCM codex. Seams to be universally used on all digital phones and the logarithms are public domain. If your interested in this please post.

1946. "Plaything" software for XP

Yahoo group: PCR1000
Date: 2003-11-24 12:41:16 UTC
From: retrocalc
Topic: 1946 Message: 1946

A while back we had a thread about a program called "Plaything" for the PCR. I wrote the author a few weeks ago in care of the the site's webmaster. He just sent me a new code build which DOES come up on XP notebook. It's a beta, and I'll be sending him feed back as I play with it. As hoped, it looks really neat. It has all kinds of different "gauges" for internal receiver goings-on. The beta is for XP and is build 2.0.15. I'll let you all know what I find, but it looks like it will be a great additon to our kit of software tools.

Best wishes and happy listening,
Jack, the retrocalc guy...

Has anyone here actually used one of these limiters? Do they do a
worthwhile job of reducing intermod in areas of "RF Hell"?

Jerry

Noise cancellers work pretty well, however since they require a certain
skill,
they may be beyond the interest of the group.

Yahoo group: PCR1000
Date: 2003-11-28 12:50:58 UTC
From: Brian Reay
Topic: 1958 Message: 1958

Hi,

I'm running version 2 of the Icom supplied SW with my PCR1000 on two machines- one Windows 98 and one XP Home.

Everything seems to work- other than I can't store anything in the memory list. I can enter a frequency but, as soon as I change cells to enter the mode etc., the entry is blanked.

I've tried a delete and re-install to no avail.

Any ideas, please?

Brian,
How are you writing to the memory list?
At the top of the program in the componant radio screen is a box that looks like a stack of paper.Click on that and screen will appear.Add your information here.The settings should deffalt for the frequency.If it doesnt then you have to manually change the settings.I perfer to set my options myself.I like to keep a 3khz wide filter for anything on usb.There is a good website to go to for some references to the Icom program and others like talkpcr. http://qsy.to/pcr/

From: electrotek888
Topic: 1963 Message: 1963

Does anyone have a fix for the 'millenium" (ME) used on compaq with Pentium 3.

This seems to have 16 bit disabled on com port 1, no communications type error and com port error. Tried numerous fixes, no luck.

and it appears I have to add a com port card.

My question is this, if I plug a USB adapter on the pcr-1000 cable, will the ME program detect the 16 bit communication and "auto" assign a communications route?

I have had serious problems with ME program on other devices as well, I get the impression that ME is very weak in some areas.

I am still learning the system, but it seemed to be much easier with '95, which was used for a time with no problems.

Thanks.

ME has a well known bug in the COM1 Port..... here is a fix that a programmer sent to the Ten-Tec list for those with similar issues with receivinhg the infamous COM1 errors in ME.

I have been running Windows ME for 2 years now with virtually no problems.

But in order for Windows ME to work properly with the COM1 serial port, a change to the registry is required. For those of you that have enough courage and knowhow to use the registry editor "REGEDIT", this is how you fix it.

1) Open the registry editor called "REGEDIT".
2) Go down the various trees in the registry and find the entry labelled HKEY_LOCAL_MACHINE\System\CurrentControlSet\Services\VxD\VCOMM
3) Change EnablePowerManagement from 01 00 00 00 to 00 00 00 00.
4) Exit REGEDIT.
5) Reboot the computer.

Great care must be taken that this is the only thing that you change in the registry. This has worked flawlessly for me for over 2 years.

I tried this fix as well and it solved the COM1 issues for me too. Perform this at your own risk though.

Regards,

Mike, W9WIS

From: Glenn Blum
Topic: 1973 Message: 1973

Good evening,
I have a question for the group.This isnt a poll.
How do you have your sound hooked up?
Right now I use my external speaker output hooked to a good quality(sony)speaker.
My 9600 data output is hooked into my soundcard line-in.I figured this since its 9600 baud output then I assumed its the discriminator-out.I use this same setup for My Icom 821h using a soundcard interface for soundcard packet programs.
WHat do you think?

Thanks and 73s,
Glenn kd5dga

I have the speaker output going to the Mic Input and the discriminator output going to the Line Input on the soundcard. The output of the soundcard goes to a pair of M-Audio BX-5 full range amplified speakers. The configuration allows me to listen and record analog and at a push of a button decode digital without swapping cables.

Hi!...
I'm using a PCR-1000, with TPCR/SkySweepPro or Bonito 4.5(Not all at
once, though).
One of the difficulties I had was setting up the audio card. (Audigy
Platinium).
The final setting ended up muting the Line In control from the Play control,
and using the settings from the Line In on the Record Control. This was
important,
since if I wanted to use the DSP filtering from Skysweep, I would get an echo.
DSPs do have a time delay factor, mostly involving getting samples and then
adding/
subtracting them.
I'm not using the 9600 port. Looking at the schematic, the 9600 comes
from some kind
a clocked chip, the crystal being 3.58MHz. I'm suspecting that this is a
digital output,
suitable for a 9600 TNC or other device with direct digital in, such as a
BayCom 9600.
But the important thing is you have GOOD speakers (hopefully AMPLIFIED,
hooked
to the AUDIO out.) I'm not sure what position the little switch inside is
set to.
Another option I use occasionally is to plug STEREO headphones directly
to the box.
This cuts the 'local QRM/N' down, without contributing to it.
But if you want to use the filtering/FAX/CW modes with RC4.5 (or
SkySweep), you should
use line out to your soundcard (line in), Mute Line In on Playcontrol, and
adjust the input
level for distortion using the Record Control...
Good Luck and 73,
Skip Flem, NT1G

After looking at the service manual..... which btw makes no mention of the "option" ... I see what you are referring to. The J12 pin marked WFDT is linked to J2's pin with the same designation and then to the WFM IC.

I think perhaps a guess could be, Wide Fm Discriminator Tap .... WFDT

But.... more checking is needed..... later as I find time.

I found these link from a posting with the QTH.net list.
Some features I like are DC shunting of both antenna and radio.
The detailed description is in German, with a quicker summary in English.
(you need both; the German one has a better parts list and spectrum
analyzer plots)

All the components are easily available, with the 200pF variable,
being the most pricey...$15.50. page 96
The toroid cores are under $2, each. pages 88,89
http://www.oselectronics.com

Also, the 6 position switch can be purchased from
http://www.mouser.com Pg. 865
The 4 position switch is available from either source, and is only
really needed if you're using multiple HF antennas.
Perhaps it may be a good opportunity to add a switch for VHF antennas.
I'm considering using a knife switch in series with the RX switch just
to give TOTAL isolation, when not in use.

They have a PC board layout, though I'm planning to build it with
vectorboard and buswire.

Skip and the group, You have snow and its sunny and 68 degrees down here. Found that sunday was a really good day to complete some antenna maintennance. My diapole balun was touching one of my tower legs.Reposition the balun and solved my problem.Now my signal strength is up.Really putting my external attenuator to good use.Found that the PCR's attenuator is a little bit much. Repositioned my discone.I felt it was too close to my tower causing a isolation in certain direction. The other day I had posted a message about setup.I decided to hook my speaker out to my soundcard directly.Worked alot better than using the 9600 baud to my line-in when it came to audio.Only problem was using radiocom 4.5 too much echo from the dsp.I need to do a little bit more experimenting I had the internal speaker setting to speaker and not to headphone.The Icom manual shows this and maybe I was overdriving my soundcard.I have a cheep set of pc speakers.That is one of my items for christmas. Another experiment that I am going to do is build a antenna tunner.I have all the parts except a metal case. Anyone have any good ideas of projects going on? Thanks, Glenn kd5dga Quoting Skip Flem : > > > > > I found these link from a posting with the QTH.net list.

Of course, the ICOM BC-123A is the PERFECT PCR-1000 supply,
but what you really want is something that can provide 12-13 volts
with at least 1000mA. (1 amp.) using a 5.5mm od/2.5mm id coaxial
(not COAX) connector.
What I've been using is a automobile 12volt CAR JUMPER battery to
feed my PCR-1000, with a cigarette lighter plug to DC connector cable.
(I've accumulated a few from different sources) and the BC-123A
it keep the jumper battery topped off. When we lose power, I run the
PCR from a battery operated notebook pc. Or then plug a scanner into
the battery. The scanner/ battery combo will last much longer than any
notebook PC battery.
I noticed yesterday that RadioShack has a 12V/1.75A supply on sale for
~$18. Then all you need is a cord. I'd cut on off from a dead wall wart;
use Center conn. = +
Good Luck,
Skip

From: Michael Melland, W9WIS
Topic: 1983 Message: 1987

I believe any well filtered 13.8 VDC +/- 15% and at least 1000 ma supply will work just fine (the factory provided supply is 12 VDC, 1000 ma). My preference would also be to use a regulated supply... they are more expensive but worth it. There are several wall wart type supplies at Radio Shack that would work with the proper coaxial power plug.

The latest ICOM IC-PCR1000 software ISN'T bad, (available over the net from ICOM).
TalkPCR seems to be the majority's favorite. Bonito4.5 did get a vote or two.
It really depends on what you want to do and your skill level.
(Try asking 50 people what their favorite car IS...there is NO correct answer.)

The standard PC has a dual power supply: if memory serves me the red wires are 5v and the yellow ones are 12v.

I actually installed a socket on a card blank panel- the insert that you remove when you install a PCI or ISA card. From there I made a cable to plug into the PCR-1000.

It merely saves an extra wall-wart behind the computer area, but it will save buying another if you lost yours.

2002. "CHANGE THE WORLD!" a worldwide phenomenon

Yahoo group: PCR1000
Date: 2003-12-09 15:25:42 UTC
From: feedesroches
Topic: 2002 Message: 2002

Hello,

You probably remember the "change the world by lever effect" message (see below the beginning). It is not a simple message, not only an other one among thousands you have already received. This is a worldwide phenomenon !

Hundreds of thousands people have reacted. Just see all the available translations here :

http://www.geocities.com/changetheworld_now/index.html

You may read this introduction :

"Welcome !

This website presents the world message "Change the world by lever effect !" entirely. It is the largest and the most astonishing referendum ever achieved on Earth.

Even if the original version is french, lecturers have spontaneously taken the initiative to translate it in other languages (see below). Despite I am not the message author, I do thank them. "Change the world" is spread out at the planet scale and numerous medias, surprised by this phenomenon, talk about it.

Thank you in advance to propose new versions in other languages in sending them to webmaster (please, indicate the new translation url address and the language concerned).

It is warmly recommended to copy and spread all these translations worldwide, and entirely, to other websites and medias. Check regularly here the new versions.

Good reading !"

Please, give you the time to read and read again this message. Writers, analysts and reporters have already seriously consider this ET message as a new turn for Humanity.

Sincerely,

An lecturer among others.

PS : The beginning of the message :

CHANGE THE WORLD!

"DECIDE WHETHER WE SHOULD SHOW UP!"

Whoever transmitted this translated message to you is irrelevant, and should remain anonymous in your mind. It is what you will do with this message which matters !

Each one of you wishes to exercise her/his free will and experience happiness.

These are attributes that were shown to us and to which we now have access. Your free will depends upon the knowledge you have of your own power. Your happiness depends upon the love that you give and receive.

Like all conscious races at this stage of progress, you may feel isolated on your planet. This impression makes you sure of your destiny. Yet, you are at the brink of big upheavals that only a minority is aware of.

It is not our responsibility to modify your future without you choosing it. Consider this message as a worldwide referendum! And your answer as a ballot!

Who are we ?

Neither your scientists nor your religious representatives speak unanimously about the unexplained celestial events that mankind has witnessed for thousands of years. To know the truth, one must face it without the filter of one's beliefs, however respectable they may be.

A growing number of anonymous researchers of yours are exploring new knowledge paths and are getting very close to reality. Today, your civilisation is flooded with an ocean of information of which only a tiny part, the less upsetting one, is notably diffused.
What in your history seemed ridiculous or improbable has often become possible, then realised, in particular in the last fifty years. Be aware that the future will be even more surprising. You will discover the worst as well as the best.

Like billions others in this galaxy, we are conscious creatures that some name "extra-terrestrials", even though reality is subtler.

2015. New USB adapter

Yahoo group: PCR1000
Date: 2003-12-15 02:44:44 UTC
From: David Kirschner
Topic: 2015 Message: 2015

I just hooked up my PCR1000 to my Mac Powerbook with a new USB to Serial adapter made by IOGear. It's a model # GUC232A. The cable is about 12" and comes with a driver. The only downside is that because of the screw down connector on both the radio and the adapter, I couldn't plug the adapter directly into the radio. I had to use an extension cable to plug it in.
It worked perfectly with MacPCRX and with TalkPCR on Virtual PC (without having to install the windows driver.) I haven't used it on a PC yet. The radio saw the connection right away with both programs without having to do any additional configuring. Works even better than the Keyspan adapter I have been using.
Anyone needing a USB/Serial adapter may want to check it out. I got it at Best Buys for $30.00.

2016. check this out!

2017. AUT-M mode problem in ICOM's IC-PCR1000 program

Yahoo group: PCR1000
Date: 2003-12-16 05:46:16 UTC
From: digi9345
Topic: 2017 Message: 2017

I have run into a problem with AUT-M mode that I haven't been able to figure out. If I go to the AUT-M table by using the SET button and make a new entry, the label for that entry disappears the next time I start IC-PCR1000. The rest of the data for the new entry is OK but the label (name) is gone. The same thing happens if I manually edit the PCR1000.ini file. I am using version 2 and running Windows XP. I don't recall if I had this problem with version 1 and Windows 98. Can anyone help?

AutoMode, when turned on, will automatically configure the radio for the frequency you are on if that frequency is defined in the AutoMode table. For instance, if you make an entry with a 'FREQ LOW' of 88.0 MHZ and a 'FREQ HIGH' of 108.00 MHZ, the radio will configure itself with the parameters that follow those frequencies in the table whenever you tune to that range. Assuming that you had defined WFM in the 'MODE' column, each time you tune to a frequency in the FM broadcast band, the radio would switch to Wide FM. It works great except that the data in the 'NAME' column disappears for some reason or other. You will also find that 'AUT-M' gets reset each time you go to 'MEMORY' mode. I find that annoying.

To: PCR1000@yahoogroups.com
Subject: [PCR1000] "Plaything" software for XP

A while back we had a thread about a program called "Plaything" for the PCR.
I wrote the author a few weeks ago in care of the the site's webmaster. He
just sent me a new code build which DOES come up on XP notebook. It's a
beta, and I'll be sending him feed back as I play with it. As hoped, it
looks really neat. It has all kinds of different "gauges" for internal
receiver goings-on. The beta is for XP and is build 2.0.15. I'll let you
all know what I find, but it looks like it will be a great additon to our
kit of software tools.

Best wishes and happy listening,
Jack, the retrocalc guy...

2027. Re: [PCR1000] Bonito 4.5

Yahoo group: PCR1000
Date: 2003-12-17 17:49:09 UTC
From: kd5dga@isot.com
Topic: 1989 Message: 2027

How good is scancat for the pcr1k?
I have never looked at scancat products,and I wanted to know.
Right now I am enjoying the hf side and found the pcr to be better than I ever expected, alot better than what I ever had.

From: John
Topic: 1989 Message: 2028

I wouldn't waste my time with SCANCATGOLD. I have
never tried this version but I have used it years ago
and I didn't care for it at all. After reading about
how to get around the timer, I downloaded it but I
aborted the install after reading this:

This demo is 'Surveillance Enhanced" and certain
features are only available in the "SE" program.

PLUS
Certain features are "limited"
in the Scancat-Gold for Windows DEMO:

ALWAYS starts in "virtual radio mode" each session
Only runs for one hour per session.
Only supports the first 30 records of a file.
Only programs first bank of a radio
Does not support AR8000/2700 EEPROM utilities
Does not save database files to the disk
Does not contain support for Dbase, Access files

This Demo version doesn't seem to do much.

From: Michael Melland, W9WIS
Topic: 1989 Message: 2029

This is great guys.... lets continue to screw anyone that develops software for our radios. Perhaps one of you would post your bank account number and pass code here for others to use.... the way I see it it's the same thing, theft. No wonder we are blessed with so few good programs.

As they say there is no harm in trying. We would all just have to
figure out exactly what we wanted in this program.

2031. program inprovements

Yahoo group: PCR1000
Date: 2003-12-18 03:09:43 UTC
From: Glenn Blum
Topic: 2031 Message: 2031

With good programs like talkpcr,radiocom 4.5 and others icom control program is extremely basic needing some if not alot inprovement.
What would you like to see Icom inprove on their program?
Here is my suggestions;
1.Clock with both local time and UTC.(glenn kd5dga)
2.Better band scope.Glenn kd5dga)
3.Full screen capabilities (full width and full height in componant screen.)(Glenn kd5dga)
4.Selectable attenuator in steps maybe like 3db per step (This would take modifying the pcr.)
(Glenn kd5dga)
5.

I am going to keep a copy of this and if anyone responds to this I will add to the list and only use their name next to the suggestion.Maybe over a certain period of time I will compile the information and during that time find a contact within Icom and send this off.Maybe we may get some attention and then maybe not but hey why not at least try.

Thanks,
Glenn kd5dga

Dear Sir,
I have a question conserning about Icom's pcr1000's control program.
Who could I talk to about inprovements?

I currently belong to the Icom-pcr1000 Yahoo talk group and I am
compiling a
list of inprovement that we all like to see.I would assume since we all
belong to this group love the pcr1000 and would like to make suggestion
to
continue inproving the control program.

Thank You,
Glenn Blum

Hi everyone just to let you know i have a pcr1000 for sale on ebay

Item name: Icom PCR 1000 Communications Receiver

Item number: 3066471961

thanks...David

2035. Installaton of UT-106

Yahoo group: PCR1000
Date: 2003-12-19 01:56:48 UTC
From: kk1w2000
Topic: 2035 Message: 2035

I just received a UT-106 I bought on ebay. I didn't get the instructions. Anyone out there that can point me in the right direction for a copy on the web? Or just what plug goes where? It doesn't look to difficult, I just don't want to screw it up.

I searched the icom america home page but found nothing.

Thanks,

Jim, KK1W

I have a PCR100 that I lost the cable to.
Does anyone know if it is a straight through (the kind you get at
walmart) or a special $40.00 cable I have to buy at ICOM.

I think it is the same one used for the PCR1000.

Thanks
larry

2048. Re: [PCR1000] IC-PCR100 Cable

Yahoo group: PCR1000
Date: 2003-12-20 05:01:51 UTC
From: larry raney
Topic: 2042 Message: 2048

Yes, gave that a try -still no go.

Could be using wrong power supply - What is the DC output for the power supply?

Thanks

2049. Re: [PCR1000] IC-PCR100 Cable

Yahoo group: PCR1000
Date: 2003-12-20 09:19:45 UTC
From: Frank(ee)
Topic: 2042 Message: 2049

I don't think that is very critical. I feed it approx 12V DC, but I seem to remember a discussion in the early days of the PCR1000, showing that it would work at considerably lower voltages and would swallow even 13.5V or something. Perhaps Pres. Waterman remembers? I guess he also partook in that discussion.

From: Anders Henriksson
Topic: 2042 Message: 2050

Larry

Could it be that the com-port on your PC is used and is busy for some
other application on your computer ?

Try to solve that problem using a program called Easycom. You can find
it on the wab searching for "easycom.exe"

Good luck

Anders

up to 15v has not been a problem. Lately I have fed it with 12v from my PC's power supply to eliminate the need for a wall-wart

Thanks

Pres Waterman.W2PW

You cant use an EPROM backup from another unit even if it is of the same type even if it is manufactured in the same batch.

The EPROM content is derived from your specific individual unit. As I understand you must hand the unit over to nearest

ICOM service center. They can help you.

Anders

Hm,
Got the same problem (bought it second hand) and took another
parameter file from then WEB.
Maybe I did not get the optimum, but worked for me. I also did some
quick checks with a HF generator afterwards. The filter settings were
ok.
Remember, you can finetune these prefilters with TalkPCR or EX??99.
Any more experiences with this issue from the other group members?

Regards, M.

2062. thanks to all list mebers for the eeprom-backups

Yahoo group: PCR1000
Date: 2003-12-23 10:53:48 UTC
From: drjitter2000
Topic: 2062 Message: 2062

hi there,

Thanks to all listmembers for the eeprom data.
I made some tests with my icom.

I adjusted the x-tal-ref. frequency
with my frequency-counter.

I tested all voltages und the audiolevels, all are OK.
Receiving sensitivity seems much more better as before.

But i dont own a rf-signal-generator up to 1,3GHz to test it.
Some tests require a expensive rf-generator.

Please remeber, on yahoo PCR-1000 are a filebase, all members can
share files over the filebase. You have access on it, over the web.

There are currently only one eeprom backup file in all formats!

Please folks, put all your backup-files (any format) to the filebase.
If somebody have the same problems, he will enjoy a large collection
of backup-files.

Thank you and have a Merry Christmas.

regards,

jitter

Use one with TalkPCR with no problems.. But no use at all with the Icom
PCR1000 software..

2068. DRM mods

Yahoo group: PCR1000
Date: 2003-12-23 18:48:02 UTC
From: john.mckenzie33@ntlworld.com
Topic: 2068 Message: 2068

I see there is a new version of the Dream DRM receiver available from http://sourceforge.net/projects/drm/. I also have the DRM downconverter from http://home.t-online.de/home/sat-service/sat/DRM/DRM.htm and the receiver mods from http://www.drmrx.org/receiver_mods.html.

I was just wondering if anyone reading this group has actually done the mod and want to know how easy it is.

I run a dual boot system with Win98 and Redhat Linux V9. I am
trying to migrate away from Windows so I'm doing more stuff on
Linux these days.

On Win 98 I user TalkPCR. I have got Visual C++ but have not
tried to get Dream running.
On Linux I use QTpcr but I'm a bit disappointed it has no DSP
support - I may put that in over the Xmas hols. I have tried getting
Dream up and running on Linux, but I've a few problems with the
./configure because that fails with a "command not found". I may
try one of the earlier versions 0.9.1 or 0.9.2 see what happens.

I believe I have the correct downconverter. It's got a small pot on it
marked 502

2075. powermate

Yahoo group: PCR1000
Date: 2003-12-24 15:48:06 UTC
From: Pres Waterman
Topic: 2064 Message: 2075

Does anybody have any good experience with the pwoermate USB controller used as a dial control?

Yes, and just so this is more than a "me too" post, I will say that it works well with TalkPCR or any software that allows tuning by keyboard.

For example, I have set the "rotate right" to be "up arrow" and "rotate left" to be "down arrow"... thus, when the mouse pointer is highlighted in the tuning knob area, it works like a tuning knob should.

Furthermore, I have set "click" (the act of pushing the knob quickly) to be "volume mute" (a PC system volume control command) and "hold-push-right" to be "right-arrow" and "hold-push-left" to be "left arrow" which then operates the volume and squelch virtual controls in TalkPCR.

Finally, the PowerMate software allows different functions to happen depending on which window is highlighted, meaning it will scroll your Internet Exploder window when that is the focused window or control TalkPCR if that is... and many other program-specific functions.

BUT there was a strange bug I found- when run through a certain USB hub the PowerMate would randomly mute the system audio. Going direct or through a different hub the problem went away. ODD!

Otherwise I love the PowerMate.

Hi All,

I just started using TalkPcr with my PCR-1000. It is a very nice program but I have ran into a little problem that I can't resolve.

When I am scanning frequencies in a bank the program stops after a signal is received and will not start scanning again. Has anyone ran into this before? I have looked at the control options and I see nothing related to resuming scanning after a signal is detected.

Hope everyone had a very Merry Christmas and a Happy and prosperous New Year 2004.

Tom,

Try double clicking the left or right arrow to start scan, the arrow head will turn red and the program will rescan after each each scan lock. A Single click on arrow heads starts a scan (arrow head remains blue) which after locking up does not rescan.

Hope this helps

Paul

From: Glenn Blum
Topic: 2091 Message: 2092

This is how I have mine hooked up;
Sound out from my pcr1000 to my line-in on my soundcard.Now You will be able to hear everything through your computer speakers.Check your sound card properties by double clicking the speaker in the task bar.Make sure that the properties is set up correctly.Make sure that on record that the line in is checked.
To use the radiocom decoder I suggest this to start off with look in the middle of the screen there is a box with frequencies to the left then modes,if station name,station type,call ,country and mode.To the top of that click on country,then scroll down untill the screen shows stations in the USA.Double click on some of the fax stations and you should be able to recieve fax automatically, as long that there is a scheduled fax broadcast on that frequency.This is a easy way to start off the when you get the feel of the program then you will be able to use more advanced features.There is alot more to this program but you may mess up if you are not carefull.I DID and had to reinstall it because I didnt know what I was doing.Search the radiocom 4.5 cd and you will find a few other programs like a fax schedule,satillite tracking program and some others.
Once you get used to radiocom 4.5 then you can sit back and enjoy!

2093. Problems with noise from monitor

Yahoo group: PCR1000
Date: 2004-01-05 05:00:05 UTC
From: zard0z1
Topic: 2093 Message: 2093

I'm having some problems in the low MHZ area (like 3 - 11 Mhz) with noise from my monitor causing a whistle..I turn off
the monitor, it's ok, monitor on, whistle..It is a cheap Korean made monitor, and maybe it just has no RF shielding..
Has anyone else had this problem? How did you solve it? Changing the ground did not seem to make much difference.
It lowered it only slightly..The computer that runs it also has some negative effects as well on some frequencies..Mostly just
white noise wooshing..Anyone give me a hand with this?

Z

I solved ALL my monitor noise issues with going to a LCD monitor. Yes, they still do
make A noise, but not like that flyback noise you're experiencing.
The LCD is MUCH easier on your eyes, since there is NO pixel-focus issues.
The bad side is you can buy another PCR-1000 for the price of a LCD monitor.
Solution #2.: Buy 100' of coax and put your antenna far from your (and anybody else's) monitor. Also ferrite chokes on the serial, audio, and power lines will keep monitor noise from inside your radio. And headphones (the 60ies style, with full ear enclosure) plugged directly into the radio will eliminate any noise from the soundcard for troubleshooting- or regular listening...
Also, be sure you have a GOOD ground; a heavy wire going to an external ground.
Have you borrowed someone else's monitor?

Thanks for the idea, I do have another machine and monitor in the same room.And that monitor doesnt cause nearly the
amount of noise the other one does..But it still does make some noise..The other monitor is newer and is an all around better
monitor...The ground is decent..Im going ot have to bite the bullet and get another monitor to eliminate this problem..I need to
be able to use both systems apart from each other, so i'll need another monitor.Those switch boxes for keyboard/mouse/monitor
are a good solution .. But it's functionally easier to just get another monitor..Thanks

2096. monitor noise

Yahoo group: PCR1000
Date: 2004-01-05 17:23:23 UTC
From: kd5dga@isot.com
Topic: 2096 Message: 2096

Good Morning,
I use a sony multiscan 100 and dont have any problems with noise.The monitor is about 18 inches away from my pcr1000.Sounds like a antenna problem.Are you running a outdoor antenna?
The reason for this I did hook up a indoor antenna when I first hooked up my pcr1000 and had nothing but pure noise from both my monitor and computer.A few days later when I had the cance to hook up my external outdoor antenna the noise pretty much went away.After trouble shooting I found that I didnt have a good ground to my cable and the sheilding wasent doing its job.Once I re installed my coax connector(pl-259)properly the noise went completely away.
I hope that you are able to get rid of your noise problem.

I have been playing with a Compaq Laptop and the PCR1000 , problem was no Serial port on the laptop, like most...I went through 3 products before i could find one that worked correctly without errors.Yes the "Blue Screen Of Death" , the famous ser2pl.sys error. Tried several updates, and many nites with headaches...Don't spend your money on anything but the "Belkin F5U409-CU" nothing else works with XP...happy scanning !

I wouldn't even bet on the Belkin 409-CU.I sent one back with an
OMNIBOOK in 2002. I originally selected the OmniBook because a
catalog ad said it had a serialport.
I now have 5 Toshiba laptops (all with serial ports); they all
run a PCR-1000 to the extent of the software. TalkPCR, Bonito
4.5 or the Icom software. The P4 also runs SkySweepPro.
The Toshiba Librettos have a MMX 233 using Win2000/ I generally
use TalkPCR and an amplified DSP speaker.
Toshiba seem to be the last line of laptops shipping with a serial
port. At least they still work with most applications.

I got USB to Serial adapter from Tiger Direct for $16.99. Came with drivers. Works great! Order two, their shipping's a bit high. You'll need the other one for another application.

I havent tried trunkpcr as of yet.Right now its only configured for Motorola trunk systems.
There is a person on here called CrazyCalifonian who is the writer of that program.Give him a shout.
From a previous email directly to him , he is trying to write a newer version of trunkpcr to support GE-Erricson edacs.

I also found the adapter that I was using was no good.Aparently it was cheep.Luckly I had somemore stashed away in my connector box.Once I had everything settled down (I was like a child at christmas time) I made up a patch cable that had only a bnc connector that hooked to my pcr.Right now I run three antennas,a discone,a 100 foot diapole and a Cushcraft ar-270b 2meter/70 cm vertical.All into a 4 position coax switch.Luckly over the past several years I had collected up enough extra parts to change things around.I know this maybe getting a little off topic but since my ar-270b is at the highest point(45 feet off the ground) and its mainly for vhf/uhf worked great for vhf aeroband.Now I can see ACARS out to about 400 miles or so.

Hopefully you can get something to work out for you.I found the pcr1000 a great radio.

Bert ...
Hello Jason here , I however ran into some real problems...I tried the IOGEAR USB to Serial first , on a Compaq Presario laptop, plenty of speed and mem...It would only let me run the IC-PCR1000 factory software, not TalkPCR . Then i switched to the Radio Shack USB to Serial , and i found that it would only let me run TalkPCR not the factory software . Finally after by wallet was empty i bought the Belkin USB to Serial and they all seem to work fine...I have the above Equiptment running windows XP PRO ...the problems i would get it the blue screen of death, saying that windows have incountered a serious problem and needs to shut down...then it reboots , but sometimes it hangs...needless to say, what ever you buy SAVE all the packages cause there is a good chance it maybe returned for another, good luck

Jason

2119. Monitor, computer and other noise solution

Yahoo group: PCR1000
Date: 2004-01-11 04:56:15 UTC
From: Klaas
Topic: 2119 Message: 2119

The nice thing about the pcr1000 is that you don't need to place it near your computer at all.
The greatest loss of signal (and adding of noice) occurs in your coax cable so keep it as short as possible.
I use a Diamond D-130 discone antenna with just 10 metres of Aircom high quality coax cable, the pcr1000 is located just inside my house and is connected with 15 metres of shielded serial cable (and a sound cable) to my computer.
Also people who live in an appartment where they can't use a outside antenna, keep your pcr1000 away from your computer and other electrical devices!

Just my 2 (euro) cents....

Klaas

Matty,
I guess it would depend apon how much you want to spend.I am using a cable called LMR-400 from Times Microwave.The only reason because I had some extra left over from my amateur radio antenna installation for satillites.I have heard of folks using rg-6 or rg-59 catv cable with good results.Its probably much cheeper approach.The only problem that I see is you have to modify a pl-259 adapter for the coax outside diameter or use a adapter from a pl259 to a "f" coax connector.I just dont like using a bunch adapters to make somethin g work,That may make some loss.

Have a wonderfull day!

2131. Re: [PCR1000] Coax cable

Yahoo group: PCR1000
Date: 2004-01-14 16:39:38 UTC
From: Michael Melland, W9WIS
Topic: 2129 Message: 2131

IMHO the best for your purpose... seeing that you will also be transmitting... is one of two options.

Best Option - Andrew Heliax, I'd go with the 1/2"(4) or 3/8"(2)diameter. If you need to make tighter curves or corners use FSJ Heliax (minimum bend radius is 1") or LDF Heliax (minimum bend radius radius is 5"). LDF4-50A which is 1/2" has a loss figure at 150 MHz of only 1.87 dB in 70 meters (for USA .008 dB per foot - .815 dB loss in 100 ft) ..... and only 6.36 dB per 70 meters (for USA .028 per foot - 2.77 dB per 100 ft) at 1500 MHz !

Heliax has the best immunity from interference and you can expect a properly installed Heliax cable to have a life much longer then conventional coaxial cable. A minimum of 10 years to well over 20 years. The downside is special connectors are necessary and the cost of the cable and connectors. Heliax lists depending on the cable for $2 to ~$3 per foot and connectors can be as much as ~$35 each. That said, it sells on eBay all the time for MUCH less. Typical prices are <$49 for 50 feet of LDF4-50A and <$9 per connector. I just purchased 50 ft of brand new LDF4-50A for $29 and new "N" connectors for $6.95 each on the Bay.

Next Best - Davis RF "BuryFlex" type (RG-214 type improved). Reasonable loss, easy to route, low cost compared to Heliax.... ~.75 per foot +/- and standard connectors made for RG-8 type cable will work (may require triming the center conductor down a bit ala Belden 9913 to fit connectors). I also like Times Microwave LMR-400 but it's nearly the cost of Heliax and requires special connectors. It also won't last as long....

If it were me I'd look at eBay and buy what Heliax I'd need. The Andrew Heliax "roll crimp" connectors are very easy to install and are weatherproof. I'd go 1/2" and look at LDF4-50A or maybe better if you need some additional flexability... FSJ4-50B super flexable Heliax.

Hi Dave,

I have a Discone in the loft and works reasonably well. Certainly the higher you can mount it the better.

I also use some home brew dipoles with other radios for airband and a long wires for HF.

TalkPCR is my choice of software, have a look at the url below.

http://qsy.to/pcr/talkpcr.html

Hope this helps,

Bill

I think the software depends on what you will be using the PCR-1000 for. Regular type scanning VHF/UHF stuff then PROBE1K hands down is the best software out there. Using it for HH type monitoring then TALKPCR is the best.

The PCR1000 works very well with a Discone, maybe better than any other radio.

I think the software depends on what you will be using the PCR-1000
for. Regular type scanning VHF/UHF stuff then PROBE1K hands down is
the best software out there. Using it for HH type monitoring then
TALKPCR is the best.

The PCR1000 works very well with a Discone, maybe better than any
other radio.

<<Hi Bill,

Thanks for the link...I downloaded the PCRTalk software, it
seems very good...
Can I purchase a indoor Discone antenna or do I need to make it myself ?

Dave >>

Hi Dave,

I have a Discone in the loft and works reasonably well. Certainly the higher
you can mount it the better.

I also use some home brew dipoles with other radios for airband and a long
wires for HF.

TalkPCR is my choice of software, have a look at the url below.

http://qsy.to/pcr/talkpcr.html

Hope this helps,

Bill

Do you have a attic that you can get into?
If you can the buy a discone and just sit it up in the attic and run
something like rg-6 or rg-59 down to your pcr1000.Just make sure that the
connections a good.

Glenn
